### NEW QUESTION 41

Which layer of the OSI Model performs error checking?

- A. Network Layer
- B. Data Link Layer
- C. Physical Layer
- D. Transport Layer

With the help of VCE4Dumps Juniper JN0-106 dumps torrent, it is more time-saving effort to get Juniper JN0-106 certification. In fact, you are not far from success. With VCE4Dumps Juniper JN0-106 exam dumps, you must be IT talent. We provide you with free demo and pdf real questions and answers for further acquaintance. If you make use of our Juniper JN0-106 Exam Dumps, we will accompany you on your road to success.

The reason why many people choose VCE4Dumps is that VCE4Dumps brings more convenience. IT elites of VCE4Dumps use their professional eye to search the latest JN0-106 certification training materials, which ensure the accuracy of our JN0-106 Exam Dumps. If you still worry, you can download JN0-106 free demo before purchase.

## Juniper JN0-106 Valid Test Questions, Lab JN0-106 Questions

Our JN0-106 study materials can provide you with multiple modes of experience, there are three main modes to choose from: PDF, Software and Online. Firstly, the PDF version is printable. Secondly, the Software version of JN0-106 exam questions can simulate the real exam environment to give you exam experience more vividly. Thirdly, the online version supports all web browsers so that it can be worked on all the operating systems. And our JN0-106 Study Materials will help you in a more relaxed learning atmosphere to pass the JN0-106 exam.

## Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q69-Q74):

### NEW QUESTION # 69

Which Junos feature limits the amount of exception traffic that is sent from the PFE to the RE?

- A. scheduler
- B. CoS markings
- C. routing policy
- **D. policer**

**Answer: D**

Explanation:

In Junos OS, a policer is a feature used to limit the rate of traffic flow in the network, including exception traffic sent from the Packet Forwarding Engine (PFE) to the Routing Engine (RE).

Exception traffic consists of packets that cannot be processed by the PFE alone and require intervention by the RE, such as control packets or packets destined for the device itself. A policer can be configured to enforce bandwidth limits and drop or mark packets that exceed specified rate limits, thus protecting the RE from being overwhelmed by excessive exception traffic.

### NEW QUESTION # 70

What are two benefits when implementing class of service? (Choose two.)

- **A. Latency-sensitive traffic can be prioritized**
- B. Traffic congestion will be eliminated.
- C. The network will be faster.
- **D. Traffic congestion can be managed.**

**Answer: A,D**

Explanation:

Class of Service (CoS) is a method used to prioritize traffic based on its type or importance. It allows you to define different levels of service for different types of traffic.

B). Traffic congestion can be managed: CoS helps to prioritize traffic and allocate bandwidth more effectively, allowing critical or time-sensitive traffic to be given priority over less important traffic, which helps to manage congestion.

D). Latency-sensitive traffic can be prioritized: CoS enables you to give higher priority to latency-sensitive traffic (e.g., VoIP or video) over less time-sensitive traffic (e.g., file transfers), ensuring that these critical services perform well even during network congestion.

### NEW QUESTION # 71

Referring to the exhibit, which two statements are correct? (Choose two.) policy-options { policy-statement Load-Balance-Policy { term Load- Balance { then { load-balance per-flow; accept;

```
}  
}  
}  
}
```

```
routing-options {  
router-id 192.168.100.11; autonomous-system 65201; forwarding-table  
{ export Load-Balance-Policy;
```

- A. The policy must be applied under the protocols hierarchy.
- **B. The policy enables flow-based load balancing.**
- C. The policy enables per-packet load balancing.
- **D. The policy enables equal cost load balancing in the forwarding table.**

**Answer: B,D**

Explanation:

The load-balance per-flow statement in the Junos OS policy-options configuration enables flow-based load balancing in the forwarding table. This means that the traffic is distributed across multiple paths based on flows, where a flow is typically identified by attributes such as source and destination IP addresses, and possibly layer 4 information like TCP/UDP ports. This allows for more granular and efficient utilization of available paths, avoiding overloading a single path. The policy does not enable per-packet load

balancing, which would send individual packets of the same flow over different paths, potentially causing out-of-order delivery issues. The policy's placement in the forwarding-table export suggests it's intended to influence forwarding behavior, not just routing protocol decisions, and does not necessarily have to be applied under the protocols hierarchy.

#### NEW QUESTION # 72

You need to recover the root password on a Junos router without losing the current configuration settings. Which three statements describe what you should perform in this scenario? (Choose three.)

- **A. Enter and commit the new root password.**
- **B. Use a console connection to reboot the device.**
- C. Upgrade the Junos OS to the latest version.
- D. Load the factory-default configuration.
- **E. Hit the space bar and enter recovery when prompted.**

**Answer: A,B,E**

Explanation:

To recover the root password on a Junos router without losing the configuration, you should (A) enter and commit the new root password once you have gained access to the system, (D) hit the space bar to interrupt the boot process and enter recovery mode when prompted during the boot process, and (E) use a console connection to reboot the device and access the bootloader prompt. These steps allow you to reset the root password while preserving the existing configuration.

#### NEW QUESTION # 73

Your router has a route to the 10.1.1.0/24 network with a next hop of reject. In this scenario, which action will your router perform when traffic destined to the 10.1.1.0/24 network is received?

- A. The traffic will be silently discarded.
- B. The traffic will be redirected using a default route.
- C. The traffic will be discarded and an ICMP unreachable message will be sent to the destination of the traffic.
- **D. The traffic will be discarded and an ICMP unreachable message will be sent to the source of the traffic.**

**Answer: D**

#### NEW QUESTION # 74

.....

Our Junos, Associate (JNCIA-Junos) exam question has been widely praised by all of our customers in many countries and our company has become the leader in this field. Our product boost varied functions and they include the self-learning and the self-assessment functions, the timing function and the function to stimulate the exam to make you learn efficiently and easily. Thus you could decide whether it is worthy to buy our product or not after you understand the features of details of our product carefully on the pages of our JN0-106 Study Tool on the website.

**JN0-106 Valid Test Questions:** <https://www.vce4dumps.com/JN0-106-valid-torrent.html>

Buy the JN0-106 test preparation material now and start your journey towards success in the Junos, Associate (JNCIA-Junos) (JN0-106) examination, If you buy our JN0-106 study torrent, we can make sure that our study materials will not be let you down, Juniper Trustworthy JN0-106 Exam Content You will be notified by email unless you have instructed not to in your Member's Settings, and you will have immediate access to the updates, or any new exams added in the future, Our online purchase procedures are safe and carry no viruses so you can download, install and use our JN0-106 Valid Test Questions guide torrent safely.

There are problems with this approach, as JN0-106 Valid Test Prep there always will be, The OpenGL ES working group wanted to ensure that any OpenGL ES implementation would meet certain acceptable JN0-106 Valid Test Questions and agreed-on standards for image quality, correctness, and robustness.
