Reliable C1000-200 Exam Answers | C1000-200 Learning Materials

If you are craving for getting promotion in your company, you must master some special skills which no one can surpass you. To suit your demands, our company has launched the IBM MQ v9.4 Administrator - Professional C1000-200 exam materials especially for office workers. For on one hand, they are busy with their work, they have to get the IBM C1000-200 Certification by the little spread time.

IBM MQ v9.4 Administrator - Professional Sample Questions (Q264-Q269):

NEW QUESTION # 264

When an IBM MQ administrator wants to ensure that monitoring tools can collect real-time operational data such as queue depth, channel status, and message rates, which feature should be enabled to generate event messages that can be processed by monitoring systems?

- A. Dead Letter Queue Analysis
- B. Channel Synchronization
- **C. Statistics and Accounting Events**
- D. Queue Triggers

Answer: C

Explanation:

Statistics and Accounting Events generate system-level information for performance monitoring, helping administrators analyze throughput, latency, and system health.

NEW QUESTION # 265

In IBM MQ, how does the "dead-letter queue" mechanism operate when messages cannot be delivered to their intended destination, and what are the main benefits of configuring a dead-letter queue for enterprise applications?

- A. Messages are automatically rerouted to random queues to prevent backlog
- B. Messages are discarded silently to improve performance
- **C. Messages are stored in a special queue called the dead-letter queue, allowing administrators to analyze undelivered messages and take corrective action**
- D. Messages are converted to non-persistent and retried indefinitely

Answer: C

Explanation:

Dead-letter queues capture undelivered messages so administrators can inspect, analyze, and reprocess them if needed. This prevents message loss and helps maintain system integrity.

NEW QUESTION # 266

When using IBM MQ transactions, how does the concept of "unit of work" ensure that multiple messages are processed consistently, and what happens if an error occurs during the transaction?

- A. A unit of work groups messages into a single batch that is automatically committed regardless of errors
- **B. A unit of work groups messages and operations so that all succeed or all fail; if an error occurs, the transaction can be rolled back, preventing partial updates**
- C. A unit of work temporarily holds messages in memory until the queue manager decides to discard or deliver them
- D. A unit of work allows messages to be sent immediately to queues without waiting for acknowledgement

Answer: B

Explanation:

The unit of work ensures transactional integrity. If any operation in the transaction fails, all actions can be rolled back to maintain consistent messaging.

NEW QUESTION # 267

Which of the following best describes the role of IBM MQ's publish/subscribe model, including how topics are defined, how subscribers receive messages, and the advantages of using this model for loosely coupled and scalable messaging between multiple applications?

- A. The publish/subscribe model does not support multiple subscribers
- B. Subscribers must request each message manually from the publisher
- C. The publish/subscribe model sends messages to a single queue only
- **D. The publish/subscribe model allows messages to be sent to a topic, and multiple subscribers can independently receive messages, providing scalability and decoupling**

Answer: D

Explanation:

The publish/subscribe model enables a publisher to send messages to a topic. Multiple subscribers can independently receive the messages, allowing scalable and loosely coupled communication.

NEW QUESTION # 268

In IBM MQ, if an administrator wants to ensure that only authenticated applications can connect to a queue manager and that all messages in transit are encrypted to prevent interception, which channel configuration and security mechanism should be implemented?

- A. Cluster channels with IP filtering only
- B. Alias queues without security configuration
- **C. Sender-receiver channels with SSL/TLS and certificate-based authentication**
- D. Backout queues with password-only access

Answer: C

Explanation:

Sender-receiver channels using SSL/TLS encrypt messages and authenticate applications using certificates, ensuring secure communication over potentially untrusted networks.

NEW QUESTION # 269

.....

PassLeaderVCE deeply believe that our latest C1000-200 exam torrent will be very useful for you to strength your ability, pass your C1000-200 exam and get your certification. Our C1000-200 study materials with high quality and high pass rate in order to help you get out of your harassment. If you do not have access to internet most of the time, if you need to go somewhere is in an offline state but you want to learn for your C1000-200 Exam. Our website will help you solve your problem with the help of our excellent C1000-200 exam questions.

Reliable C1000-200 Exam Answers: <https://www.passleadervce.com/Digital-Business-Automation/reliable-C1000-200-exam-learning-guide.html>

HUGE CUSTOMER BASE, What we can do is to make our C1000-200 learning prep perfect as much as possible, and let our C1000-200 practice quiz conquer you with your own charm, IBM C1000-200 Reliable Study Plan AUTHENTICDUMPS – A NAME OF TRUST, So our high passing rate of C1000-200, There is always a fear of losing C1000-200 exam and causes you loss of money and waste time on some unless materials, Don't worry about C1000-200 test preparation, because PassLeaderVCE is offering C1000-200 actual exam questions at an affordable price.

Kill apps with the Vulcan Death Grip, Find the C1000-200 documentation for Perl and its modules, HUGE CUSTOMER BASE, What we can do is to make our C1000-200 learning prep perfect as much as possible, and let our C1000-200 practice quiz conquer you with your own charm.
