

# Perfect Juniper JN0-253 Pass Test Are Leading Materials & Trusted Latest JN0-253 Test Vce

P.S. Free & New JN0-253 dumps are available on Google Drive shared by ValidBraindumps: <https://drive.google.com/open?id=1kk-eOoE81mhaGqAUfWVp5yQD14qXlqe>

Achieving the Mist AI, Associate (JNCIA-MistAI) (JN0-253) certification can significantly impact your career progression and earning potential. This certification showcases your expertise and knowledge to employers, making you a valuable asset in the Juniper JN0-253 industry. With the rapidly evolving nature of the Juniper world, staying up-to-date with the latest technologies and trends is crucial. The JN0-253 Certification Exam enables you to learn these changes and ensures you remain current in your field.

## Juniper JN0-253 Exam Syllabus Topics:

| Topic   | Details  |
|---------|--|
| Topic 1 | <ul style="list-style-type: none"><li>Juniper Mist Cloud Operations: This domain covers three API types (RESTful, WebSocket, Webhook) for programmatic integration, plus support resources including ticketing systems and documentation.</li></ul>  |
| Topic 2 | <ul style="list-style-type: none"><li>Location-based Services: This domain presents virtual Bluetooth Low Energy capabilities for asset tracking, visibility, and location-aware experiences that extend networking into physical space management.</li></ul>                                      |
| Topic 3 | <ul style="list-style-type: none"><li>Juniper Mist Cloud Fundamentals: This domain covers Juniper's cloud-native platform architecture, focusing on AI and machine learning capabilities for intelligent network management and real-world deployment scenarios.</li></ul>                         |
| Topic 4 | <ul style="list-style-type: none"><li>Juniper Mist Configuration Basics: This domain addresses initial setup including user accounts, device onboarding, organizational structures, subscription licensing, certificate management, and automated provisioning with labels and policies.</li></ul> |

## Latest JN0-253 Test Vce | Reliable JN0-253 Exam Answers

The user-friendly interface of JN0-253 Dumps (desktop & web-based) will make your preparation effective. The ValidBraindumps ensures that the JN0-253 practice exam will make you competent enough to crack the in-demand JN0-253 examination on the first attempt. Real Juniper JN0-253 dumps of ValidBraindumps come in PDF format as well.

### Juniper Mist AI, Associate (JNCIA-MistAI) Sample Questions (Q36-Q41):

#### NEW QUESTION # 36

Which two Mist location tracking components run in the cloud? (Choose two.)

- A. location system
- B. location engine
- C. BLE tag
- D. location sensor

**Answer: A,B**

Explanation:

Location Engine: The location engine runs in the cloud and processes data from BLE tags and sensors to determine the location of devices within a network. It performs the necessary computations to provide accurate location tracking and analytics.

Location System: The location system, also cloud-based, integrates with the location engine to provide a complete solution for tracking and managing location data within Mist's ecosystem. This system supports various applications such as asset tracking, wayfinding, and proximity-based services.

#### NEW QUESTION # 37

Your company hosts its own enterprise-wide monitoring solution. You want to receive events from Juniper Mist. How would you accomplish this task?

- A. Using the API
- B. Using a webhook
- C. Sending an e-mail
- D. Using a WebSocket

**Answer: B**

Explanation:

In the Juniper Mist Cloud, webhooks are used to send real-time event notifications from Mist Cloud to external systems such as third-party monitoring or automation platforms. This integration mechanism allows administrators to collect alerts, status changes, and analytics data directly from Mist Cloud without the need for constant API polling.

According to the Juniper Mist API and Webhook Integration Guide, webhooks are defined as:

"A push-based communication method that enables Juniper Mist Cloud to send event data to a customer-defined HTTP endpoint when specific network events occur." This capability allows seamless integration with enterprise monitoring solutions such as ServiceNow, Splunk, or Datadog, enabling organizations to centralize event management.

The other options are not suitable:

- \* A (API): APIs are pull-based and require polling for updates, not push notifications.
- \* B (Email): Not supported for automated system-to-system event delivery.
- \* D (WebSocket): Used for live telemetry and streaming data (e.g., client updates), not event alerts.

Therefore, the correct method is C. Using a webhook.

#### NEW QUESTION # 38

Which two functions are provided by the Juniper Mist REST API? (Choose two.)

- A. event-driven monitoring
- B. Juniper Mist configuration
- C. historic statistics monitoring
- D. real-time statistics monitoring

**Answer: B,C**

Explanation:

The Juniper Mist REST API primarily provides functions for Juniper Mist configuration and historic statistics monitoring. According to the Juniper Mist documentation and API reference, the REST API allows users to automate configuration changes and retrieve historical data for analysis and reporting. Specifically,

"configuration" functions include creating, updating, and deleting sites, devices, SSIDs, VLANs, templates, and user roles through API calls. "Historic statistics monitoring" refers to the API's capability to pull time-series analytics on network and device performance, enabling users to query device usage, client events, SLE metrics, and application data over customizable timeframes. Real-time statistics and event-driven monitoring are typically accessed via Mist's WebSocket API, not the REST API. The REST API focuses on configuration management and historical data extraction for audit and trend analysis, supporting full automation and integration with third-party tools.

Verification:

These answers match the selections marked in your image ("Juniper Mist configuration" and "historic statistics monitoring") and are verified per Juniper's API documentation and feature matrix.

## NEW QUESTION # 39

You are asked to configure Mist to send e-mail alerts to your organization administrators, who all have mailboxes that reside on the same e-mail server. Alerts are being generated and are visible in the Mist GUI, but only some administrators are receiving the alert e-mails.

What is the problem in this scenario?

- A. Your e-mail server is blocking e-mail from Mist.
- B. The affected administrators have not enabled e-mail notifications in their Mist My Account settings.
- C. The user e-mail addresses are not correctly formatted.
- D. The organization does not have sufficient alert subscriptions.

**Answer: B**

Explanation:

Identify the Problem: Alerts are being generated and visible in the Mist GUI, but only some administrators receive the alert emails.

Possible Issues:

User email addresses not correctly formatted.

Email server blocking Mist emails.

Insufficient alert subscriptions.

Administrators not enabling email notifications.

Root Cause:

Since some administrators receive the alerts, email formatting and server blocking issues can be ruled out.

If alert subscriptions were insufficient, no administrators would receive the alerts. The most likely cause is that the affected administrators have not enabled email notifications in their Mist My Account settings.

Resolution:

Ensure that all administrators have enabled email notifications in their Mist My Account settings.

## NEW QUESTION # 40

Which two statements about webhooks and APIs are correct? (Choose two.)

- A. Webhooks are a push from Juniper Mist, and APIs are a pull by the client.
- B. There is an hourly limit to the number of webhooks that an organization can have.
- C. 100% of all Juniper Mist objects are configurable using webhooks.

- D. There is an hourly limit to the number of API calls that an organization can have.

**Answer: A,D**

Explanation:

In the Juniper Mist Cloud architecture, both webhooks and APIs are key interfaces for automation, integration, and data exchange with third-party systems. While they both facilitate communication between Mist and external applications, they operate in opposite directions and serve distinct purposes.

According to the Juniper Mist API and Webhook Developer Guide:

\* Webhooks are push-based notifications initiated by the Juniper Mist Cloud. When specific events occur (such as device disconnection, client onboarding, or alert generation), Mist sends structured JSON payloads to a preconfigured external URL endpoint.

\* APIs (Application Programming Interfaces) are pull-based queries where an external client polls the Mist Cloud to retrieve or update data (e.g., inventory, configuration, or metrics).

Additionally, the Mist Cloud enforces rate limits on API calls to ensure platform stability and fair usage:

"API rate limits are applied on a per-organization basis to prevent excessive polling and to maintain consistent performance." In contrast, webhooks do not have a strict hourly quota because they are event-triggered rather than continuous requests.

Therefore:

\* A is correct - Webhooks push, APIs pull.

\* B is correct - There is an hourly API rate limit per organization.

Options C and D are incorrect because webhooks are event-based (not rate-limited hourly) and do not configure Mist objects directly - they only send notifications.

## NEW QUESTION # 41

.....

Our JN0-253 desktop practice test software works after installation on Windows computers. The Mist AI, Associate (JNCIA-MistAI) JN0-253 web-based practice exam has all the features of the desktop software, but it requires an active internet connection. If you are busy in your daily routine and can't manage a proper time to sit and prepare for the JN0-253 Certification test, our JN0-253 PDF questions file is ideal for you. You can open and use the JN0-253 Questions from any location at any time on your smartphones, tablets, and laptops. Questions in the Mist AI, Associate (JNCIA-MistAI) JN0-253 PDF document are updated, and real.
