Free PDF 2026 EMT: High Pass-Rate Emergency Medical Technicians Exam Valid Exam Question

The latest Emergency Medical Technicians Exam EMT exam and exam study guide is reliable, Emergency Medical Technicians Exam EMT with reasonable exam price and guaranteed questions answers. NREMT offers actual Emergency Medical Technicians Exam to sure your success in EMT Exam. Don't worry, this Emergency Medical Technicians Exam EMT test price is benefit and content is 365 days updates!

Following is the Test Prep EMT Exam Format

Format: Multiple choices, multiple answers

- Number of Questions: 70-120
- Length of Examination: 120 minutes
- Language: English
- Passing score: 70%

NREMT Emergency Medical Technicians Exam Sample Questions (Q36-Q41):

NEW QUESTION # 36

Which of the following conditions would most likely result in pulmonary edema? Select the two correct options.

- A. Aortic dissection
- B. Left-sided heart failure
- C. Hypertensive crisis
- D. Increased oncotic pressure
- E. Severe anaphylaxis

Answer: B,C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Pulmonary edemas caused by fluid accumulation in the alveoli, impairing gas exchange. It is typically due to:

* Left-sided heart failure: Blood backs up into the pulmonary circulation

* Hypertensive crisis: Increases hydrostatic pressure in the lungs

Anaphylaxis causes vasodilation and bronchospasm, not fluid overload. Increased oncotic pressure would retain fluid in capillaries - the opposite of edema.

NEW QUESTION # 37

Through which of the following routes is hepatitis A transmitted?

- A. Fecal
- B. Saliva
- C. Blood
- D. Urine

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Hepatitis A virus is transmitted exclusively via the fecal-oral route. Ingesting contaminated food or water allows the virus to enter the digestive tract, infecting liver cells. It's often spread through poor hand hygiene or unsanitary food handling. It is not bloodborne, unlike Hepatitis B and C. It is not commonly spread through saliva or urine.

NEW QUESTION # 38

A patient has heart failure with pulmonary edema. They have shortness of breath, and crackles are present in both lungs. The patient is nauseated and has vomited once. The vital signs are BP 90/40, P 110, R 10, and SpO₂ 89% on room air. Which of the following signs or symptoms prevent the EMT from using CPAP? Select the three correct options.

- A. Blood pressure
- B. Nausea and vomiting
- C. Respiratory rate
- D. Crackles in both lungs
- E. Oxygen saturation
- F. Pulse rate

Answer: A,B,C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Contraindications to CPAP (Continuous Positive Airway Pressure) include:

* Hypotension: CPAP can reduce preload and worsen shock (BP < 90 systolic is a contraindication)

* Respiratory rate too low: A rate of 10 is at the low threshold; CPAP requires spontaneous adequate effort

* Active vomiting or nausea: CPAP increases aspiration risk

Crackles and hypoxia are indications, not contraindications, for CPAP. Pulse rate does not influence CPAP use directly.

NEW QUESTION # 39

Which of the following elements proves tort negligence in a court of law?

- A. Causation
- B. False imprisonment
- C. Assault and battery
- D. Abandonment

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The legal concept of tort negligence in EMS requires the plaintiff to establish four elements:

* Duty to act

* Breach of that duty

* Damages (harm caused)

* Causation- a direct link between the EMT's action/inaction and the harm caused. Causation (often termed "proximate cause") is the essential element that connects the EMT's breach to the patient's injury or outcome. Abandonment, assault, and false imprisonment are other intentional torts, but not core elements of proving negligence.

NEW QUESTION # 40

Which of the following would potentially complicate patient care during a helicopter transport?

- A. Maintaining 98% oxygen saturation
- B. Increase in the atmospheric humidity
- C. Use of air splints to immobilize fractures
- **D. Position of the patient's head within the aircraft**

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The position of the patient's head within the aircraft affects access to airway management and crew maneuverability. If the head is oriented away from providers or toward a non-accessible bulkhead, this can delay critical interventions (airway suctioning, ventilations).

Use of air splints, maintaining oxygen saturation, or environmental humidity are not major complications relative to physical positioning and in-cabin access limitations.
