## ISO-IEC-27001-Foundation Trustworthy Dumps, Instant ISO-IEC-27001-Foundation Discount

In order to meet the demand of most of the IT employees, Braindumpsqa's IT experts team use their experience and knowledge to study the past few years APMG-International certification ISO-IEC-27001-Foundation exam questions. Finally, Braindumpsqa's latest APMG-International ISO-IEC-27001-Foundation simulation test, exercise questions and answers have come out. Our APMG-International ISO-IEC-27001-Foundation simulation test questions have 95% similarity answers with real exam questions and answers, which can help you 100% pass the exam. If you do not pass the exam, Braindumpsqa will full refund to you. You can also free online download the part of Braindumpsqa's APMG-International Certification ISO-IEC-27001-Foundation Exam practice questions and answers as a try. After your understanding of our reliability, I believe you will quickly add Braindumpsqa's products to your cart. Braindumpsqa will achieve your dream.

## APMG-International ISO/IEC 27001 (2022) Foundation Exam Sample Questions (Q44-Q49):

### NEW QUESTION # 44

Which item is required to be considered when defining the scope and boundaries of the information security management system?

- A. The lessons learned from the information security experiences of other organizations
- B. **The dependencies between activities performed by the organization**
- C. The regular activities necessary to maintain and improve the ISMS
- D. The level of quality to which the ISMS must adhere

**Answer: B**

Explanation:

Clause 4.3 (Determining the scope of the ISMS) requires consideration of "the external and internal issues referred to in 4.1; the requirements referred to in 4.2; and interfaces and dependencies between activities performed by the organization, and those that are performed by other organizations." This confirms that dependencies between activities are a required factor when defining scope. Options B (quality levels), C (lessons learned), and D (regular activities for improvement) are not scope requirements, though they may be relevant in planning or improvement processes. Thus, the verified answer is A: Dependencies between activities performed by the organization.

### NEW QUESTION # 45

Identify the missing word(s) in the following control relating to the Policies for information security control.

"Information security policy and topic-specific policies should be defined, approved by management, [ ? ] and acknowledged by relevant personnel and relevant interested parties, and reviewed at planned intervals and if significant changes occur."

- A. published
- B. established and maintained
- C. **published, communicated to**
- D. communicated to

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract ISO/IEC 27002:2022 standards:

Annex A.5.1 (Policies for information security) states:

"Information security policy and topic-specific policies should be defined, approved by management, published, communicated to and acknowledged by relevant personnel and relevant interested parties, and reviewed at planned intervals and if significant changes occur." This confirms that the missing words are "published, communicated to." The control emphasizes not just defining and approving policies but ensuring they are actively distributed and communicated so that relevant stakeholders are aware of and acknowledge them. Options A, B, and D are partial but incomplete.

Thus, the correct answer is C.

### NEW QUESTION # 46

Which statement is a factor that will influence the implementation of the information security management system?

- A. The ISMS will encompass all controls specified within ISO/IEC 27001
- B. The ISMS will be operated as an independent process within the organization
- C. **The ISMS will be scaled to the controls according to the needs of the organization**
- D. The ISMS will be separate from the organization's overall management structure

**Answer: C**

Explanation:

ISO/IEC 27001 makes clear that the ISMS is intended to be tailored to the organization. The standard states: "This document also includes requirements for the assessment and treatment of information security risks tailored to the needs of the organization. The requirements set out in this document are generic and are intended to be applicable to all organizations regardless of type, size or nature." This means implementation is scaled based on each organization's risk, context, and needs, not a fixed one-size-fits-all set of activities or controls. Clause 6.1.3 further reinforces that control selection is flexible and risk-driven: "Organizations can design

controls as required or identify them from any source," and "Annex A contains a list of possible information security controls... The information security controls listed in Annex A are not exhaustive and additional information security controls can be included if needed." Together, these extracts verify that the ISMS implementation is influenced by and scaled to the organization's needs and selected controls, not separated from management processes (A, D) nor mandated to include "all controls" (B).

#### NEW QUESTION # 47

Which of the following statements about the relationship between ISO/IEC 27001 and ISO/IEC 27002 is true?

- \* ISO/IEC 27002 provides implementation advice on the controls selected during the ISO/IEC 27001 information security risk management process
- \* ISO/IEC 27002 provides a process for information security risk management which implements the requirements of ISO/IEC 27001

- A. Neither 1 or 2 is true
- B. Only 2 is true
- C. Both 1 and 2 are true
- D. Only 1 is true

#### Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract ISO/IEC 27001 & 27002:2022 standards:

ISO/IEC 27001 Annex A lists reference controls. ISO/IEC 27002 provides detailed guidance on the implementation of those controls, including purpose, guidance, and examples. Clause 6.1.3 of ISO/IEC

27001 makes the link explicit: controls from Annex A are referenced, but ISO/IEC 27002 explains how to implement them. However, ISO/IEC 27002 does not provide a process for risk management—that is covered by ISO/IEC 27005. Risk management requirements are in ISO/IEC 27001 (Clauses 6.1.2 and 6.1.3).

Therefore, statement 1 is true, but statement 2 is false. Correct answer: A.

#### NEW QUESTION # 48

Identify the missing words in the following sentence.

The organization shall establish, implement, maintain and [ ? ] an information security management system, including the processes needed and their interactions, in accordance with the requirements of this document.

- A. communicate the importance of
- B. report on
- C. enforce standards for
- D. continually improve

#### Answer: D

Explanation:

Clause 4.4 of ISO/IEC 27001:2022 states:

"The organization shall establish, implement, maintain and continually improve an information security management system, including the processes needed and their interactions, in accordance with the requirements of this document." This requirement highlights that an ISMS is not static; it must evolve continuously to adapt to new risks, technologies, and business changes. Options A, C, and D are not mentioned in the clause. The continual improvement cycle is central to ISO standards, aligning with the Plan-Do-Check-Act (PDCA) model.

Thus, the missing words are "continually improve."

#### NEW QUESTION # 49

.....

Our website focus on helping candidates pass APMG-International certification exams with our Valid ISO-IEC-27001-Foundation Practice Questions and detailed test answers. The most reliable ISO-IEC-27001-Foundation dumps pdf are written by our professional IT experts who have rich experience in actual test.
