Topic 5	<ul style="list-style-type: none"> <li>• Automation: This domain covers automation tools for streamlining business processes, including assignment and escalation rules, Flow configuration for various scenarios, and approval process setup.</li> </ul>

## Salesforce Certified Platform Administrator Sample Questions (Q82-Q87):

### NEW QUESTION # 82

Users at Cloud Kicks want to see information that is more useful for their role on the Case page.

How should a Platform Administrator make the pages more dynamic and easier to use?

- A. Include more tab components with filters.
- B. Delete the extra components from the page.
- C. Add component visibility filters to the components.
- D. Remove fields from the record details component.

**Answer: C**

Explanation:

In the Lightning App Builder, Component Visibility Filters allow an administrator to show or hide parts of a record page based on specific criteria, such as the user's profile, a field value, or the record type. This is the best way to make pages "dynamic." For example, the administrator can configure a "Financial Details" component to only appear when the user viewing the case has the "Finance User" profile, or hide a "Recall Instructions" component unless the "Case Reason" is set to "Product Defect." This prevents "information overload" by ensuring that users only see the tools and data relevant to their specific role or the current state of the record. Simply deleting components (Option D) or removing fields (Option C) would affect all users equally, failing to provide role-specific utility. Component visibility creates a personalized, streamlined experience that improves user productivity and reduces clutter on complex record pages.

### NEW QUESTION # 83

Universal Containers regularly imports Accounts from an external order system that has its own ID field for each record. What should the System Administrator do to help prevent duplicates during these imports?

- A. Use VLOOKUP to find matching records in Salesforce.
- B. Create a formula field that identifies matches.
- C. Create a unique External ID field on Accounts in Salesforce for matching.
- D. Use the ID from the order system in place of the Salesforce ID.

**Answer: C**

### NEW QUESTION # 84

Northern Trail Outfitters (NTO) wants to ensure new Contacts are validated before they can be saved. If a user selects that the LeadSource picklist value is Other, NTO also wants to populate a custom text field called Source\_\_c. Which validation rule should a Platform Administrator configure to meet this requirement?

- A. AND(NOT(LeadSource = 'Other'), NOT(Source\_\_c = ""))
- B. AND(LeadSource = 'Other', Source\_\_c = "")
- C. AND(NOT(ISPICKVAL(LeadSource,'Other'))), NOT(ISBLANK(Source\_\_c))
- D. AND(ISPICKVAL(LeadSource,'Other'), ISBLANK(Source\_\_c))

**Answer: D**

Explanation:

In Salesforce, validation rules use formulas to verify if the data entered by a user meets specific criteria before saving the record. To

check the value of a picklist field like LeadSource, the ISPICKVAL() function must be used, as picklist fields do not support standard text operators like

"=" in validation formulas. The requirement is to block the save if LeadSource is "Other" but the Source\_\_c text field is empty. The ISBLANK() function effectively checks if a text field contains no data. Therefore, the correct logic uses AND() to trigger the error message only when both conditions are met: the picklist is set to "Other" AND the text field is blank. Option A is incorrect because it treats a picklist like a text field. Option B and D use NOT() logic, which would trigger errors in the wrong scenarios.

#### NEW QUESTION # 85

A Platform Administrator at Cloud Kicks has a custom picklist field on Lead, which is missing on the Contact when leads are converted. Which two steps should the administrator take to ensure these values are populated?

- A. Set the picklist field to be required on the Lead object.
- **B. Create a custom picklist field on Contact.**
- C. Update the picklist value with a validation rule.
- **D. Map the picklist field on the Lead to the Contact.**

**Answer: B,D**

Explanation:

When a Lead is converted into an Account, Contact, and Opportunity, standard fields are mapped automatically. However, custom fields require manual configuration to ensure data flows through the conversion process. First, the Platform Administrator must create a corresponding custom picklist field on the Contact object (Option B) with the same values as the Lead field. Second, the administrator must go to the Lead Object Manager, select "Fields & Relationships," and click Map Lead Fields (Option C). Here, the admin explicitly maps the Lead custom picklist to the newly created Contact custom picklist. Without this mapping, the data will be lost during conversion.

Validation rules (Option A) and making the field required (Option D) ensure data exists on the Lead but do not facilitate the transfer of that data to the Contact.

#### NEW QUESTION # 86

How can multiple Campaign records be associated with a single Opportunity?

- A. Campaign Hierarchy
- B. Campaign Members
- C. Primary Campaign Source
- **D. Campaign Influence**

**Answer: D**

#### NEW QUESTION # 87

.....

The TestKingIT is one of the top-rated and reliable platforms that has been helping the Salesforce Certified Platform Administrator (Plat-Admn-201) exam candidates for many years.
