SAP Certified Associate - SAP Business Data Cloud Sample Questions (Q58-

Q63):

NEW QUESTION # 58

What are the types of datasets in SAP Analytics Cloud?

There are 2 correct answers to this question.

Response:

- A. Public
- B. Live
- C. Embedded
- D. Import

Answer: A,C

NEW QUESTION # 59

What are the prerequisites for loading data using Data Provisioning Agent (DP Agent) for SAP Datasphere? Note: There are 2 correct answers to this question.

- A. The DP Agent is installed and configured on a local host.
- B. The data provisioning adapter is installed.
- C. The Cloud Connector is installed on a local host.
- D. The DP Agent is configured for a dedicated space in SAP Datasphere.

Answer: A,B

Explanation:

To load data into SAP Datasphere using the Data Provisioning Agent (DP Agent), two crucial prerequisites must be met. Firstly, the DP Agent must be installed and configured on a local host (A). The DP Agent acts as a bridge between your on-premise data sources and SAP Datasphere in the cloud. It needs to be deployed on a server within your network that has access to the source systems you wish to connect. Secondly, the relevant data provisioning adapter must be installed (B) within the DP Agent framework. Adapters are specific software components that enable the DP Agent to connect to different types of source systems (e.g., SAP HANA, Oracle, Microsoft SQL Server, filesystems). Without the correct adapter, the DP Agent cannot communicate with and extract data from your chosen source. While the Cloud Connector (C) is often used for secure access to SAP backend systems in the cloud, it's not a direct prerequisite for the DP Agent itself for all data sources. Configuring the DP Agent for a specific space (D) is a step after the initial installation and adapter setup.

NEW QUESTION # 60

- B. Using SAP BW/4HANA Cloud, private edition queries as source for SAP Business Data Cloud Intelligent Applications.
- C. Extract data from legacy ECC systems through SAP Datasphere, SAP BW bridge.
- D. Onboarding SAP BW 7.5 Cloud, private edition queries as SAP Business Data Cloud Analytical Models.

Answer: C,D

NEW QUESTION # 62

Related to data management, what are some capabilities of SAP Business Data Cloud? Note: There are 2 correct answers to this question.

- **A. Integrate and enrich customer business data for different analytics use cases.**
- B. Delegate the integration of business data to partners and customers.
- **C. Harmonize customer business data across different Line of Business applications**
- D. Store customer business data in 3rd party hyperscaler environments.

Answer: A,C

Explanation:

SAP Business Data Cloud (BDC) offers significant capabilities in data management, primarily focusing on creating a unified and actionable data foundation. Two key capabilities are to integrate and enrich customer business data for different analytics use cases. BDC pulls data from various SAP and non-SAP sources, allowing for consolidation and enhancement of this data to provide a comprehensive view for analytical purposes. This includes applying business context and semantic richness. Secondly, a critical capability is to harmonize customer business data across different Line of Business applications. BDC addresses the challenge of disparate data silos by creating a consistent data model and definitions across various operational systems (e.g., ERP, CRM, HR), ensuring that data is understood and used uniformly across the enterprise. While BDC leverages hyperscaler environments, "storing data" is a characteristic of its infrastructure, not a direct capability of data management provided by BDC itself. Delegating integration is an operational choice, not a core capability of the platform.
