Of course, the combination use of different version of the 220-1202 Test Guide is also a good choice. You can purchase according to your own tastes.

CompTIA A+ Certification Exam: Core 2 Sample Questions (Q144-Q149):

NEW QUESTION # 144

A technician is attempting to join a workstation to a domain but is receiving an error message stating the domain cannot be found. However, the technician is able to ping the server and access the internet. Given the following information:

Which of the following should the technician do to fix the issue?

- A. Assign a static IP address.
- B. Update the default gateway.
- C. Configure a subnet mask.
- D. Change the DNS settings.

Answer: D

Explanation:

Domain join failures with successful IP connectivity almost always point to name-resolution issues. The workstation is using public DNS servers (8.8.8.8 and 1.1.1.1), which have no records for the internal AD domain or its controllers. Pointing DNS at the internal DNS server (192.168.1.10) ensures the domain name and SRV records can be resolved, allowing the join to succeed.

NEW QUESTION # 145

A user recently installed an application that accesses a database from a local server. When launching the application, it does not populate any information. Which of the following command-line tools is the best to troubleshoot the issue?

- A. ipconfig
- B. netstat
- C. curl
- D. nslookup

Answer: B

Explanation:

netstat reveals active network connections and listening ports on the local machine. By using it, you can confirm that the application has successfully opened (or attempted) a connection to the database server's port, verify the remote server's address and port, and detect any failed or hanging TCP sessions that would prevent data retrieval.

NEW QUESTION # 146

A customer is unable to open some files on their system. Each time the customer attempts to open a file, the customer receives a message that the file is encrypted. Which of the following best describes this issue?

- A. Cryptominer
- B. Keylogger
- C. Phishing
- D. Ransomware

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Ransomware is a type of malware that encrypts the user's files and demands a payment (ransom) for the decryption key. When a user receives a message stating that their files are encrypted and cannot be accessed, ransomware is the most likely cause. The attacker's goal is to hold the data hostage until the victim pays to restore access.

A: Keylogger records keystrokes and doesn't encrypt files.

C: Phishing is a social engineering tactic to gather credentials, not to encrypt data.

D: Cryptominer uses system resources to mine cryptocurrency, not encrypt files.

NEW QUESTION # 147

While working from home, the Chief Financial Officer (CFO) needs to open reports from accounting software. When the application opens, the CFO sees the error Unable to connect to database. Which of the following should the CFO do first?

- A. Return to the office
- B. Confirm the application is up to date
- C. Restart the PC
- D. Verify the VPN status

Answer: D

Explanation:

Verifying the VPN status is the first step because remote access to internal accounting databases typically requires an active VPN connection to reach internal network resources.

NEW QUESTION # 148

A technician wants to create new partitions on a device so that a user can keep work data and personal data separate. Which of the following tools should the technician use?

- A. perfmon.msc
- B. lusrmgr.msc
- C. devmgmt.msc
- **D. diskmgmt.msc**

Answer: D

Explanation:

The correct answer is B. diskmgmt.msc, which opens the Disk Management console in Windows. Disk Management is the primary built-in tool used to create, delete, resize, and format disk partitions.

The Quentin Docter - CompTIA A+ Complete Study Guide explains that disk partitioning is commonly used to separate data for organizational, security, and backup purposes. Disk Management allows technicians to divide a single physical drive into multiple logical volumes, such as one partition for the operating system and another for user data.

The Travis Everett & Andrew Hutz - All-in-One Exam Guide states that diskmgmt.msc provides a graphical interface for managing partitions, drive letters, file systems, and volumes without requiring third-party tools. This makes it the preferred and safest option for partitioning tasks on Windows systems.

The Mike Meyers / Mark Soper Lab Manual clarifies that tools like perfmon.msc monitor performance, lusrmgr.msc manages user accounts, and devmgmt.msc handles hardware devices. None of these tools can modify disk partitions.

Because the task specifically involves creating partitions, Disk Management is the correct and only appropriate tool, making B the correct answer.

NEW QUESTION # 149

.....

With rigorous analysis and summary of 220-1202 exam, we have made the learning content easy to grasp and simplified some parts that beyond candidates' understanding. In addition, we add diagrams and examples to display an explanation in order to make the interface more intuitive. Our 220-1202 Exam Questions will ease your pressure of learning, using less Q&A to convey more important information, thus giving you the top-notch using experience. With our 220-1202 practice engine, you will have the most relaxed learning period with the best pass percentage.
