## SAP Certified Associate - Integration Developer Sample Questions (Q19-Q24):

### NEW QUESTION # 19

Which SAP offering provides a highly scalable, distributed event streaming platform that supports MQTT, AMQP, and JMS protocols for efficient and secure event transmission in hybrid IT landscapes?

- A. SAP Integration Suite, Advanced Event Mesh
- B. SAP Process Orchestration
- C. SAP Business Technology Platform (SAP BTP)
- D. SAP Cloud Platform, Integration

**Answer: A**

Explanation:

SAP Integration Suite, Advanced Event Mesh (AEM) is the SAP offering that provides a highly scalable, distributed event streaming platform. It is specifically designed for large-scale, hybrid, and multi-cloud landscapes where event-driven communication is required across diverse applications and systems.

Key points from SAP documentation:

- \* Protocol Support: Advanced Event Mesh supports MQTT, AMQP, JMS, REST, and WebSocket protocols, ensuring secure and efficient event transmission across heterogeneous IT landscapes.
- \* Scalability and Distribution: Unlike standard SAP Event Mesh, which is intended for simpler messaging scenarios, AEM provides global-scale event streaming with distributed brokers that can span multiple geographies and cloud regions.
- \* Hybrid Integration: AEM enables real-time, event-driven integration across on-premise systems, SAP cloud applications, and third-party solutions, making it suitable for hybrid IT environments.
- \* Enterprise Features: It includes advanced capabilities such as high availability, disaster recovery, dynamic scaling, and fine-grained security for enterprise-grade messaging.

Why the other options are incorrect:

- \* A. SAP Business Technology Platform (SAP BTP) # This is the overall platform-as-a-service offering from SAP. It provides the foundation but not specifically the event streaming capability.
- \* B. SAP Cloud Platform, Integration # This was the older name for what is now SAP Integration Suite (Cloud Integration capability). It does not directly provide advanced distributed event streaming.
- \* C. SAP Process Orchestration # This is the on-premise middleware suite (PI/PO + BPM), but it is not designed for distributed event streaming or modern event protocols like MQTT.

Therefore, the correct answer is D. SAP Integration Suite, Advanced Event Mesh, as it is the only SAP solution purpose-built to deliver distributed, scalable event streaming with support for MQTT, AMQP, and JMS protocols.

#### NEW QUESTION # 20

You want to build an integration architecture that is largely asynchronous. Which design do you use to exchange notifications between the partners involved?

- A. Hexagonal design
- **B. Event-driven design**
- C. Request-driven design
- D. Serverless design

**Answer: B**

Explanation:

For an asynchronous integration architecture, the best design pattern is Event-Driven Architecture (EDA):

Events (notifications) are published by producers and consumed by interested partners asynchronously.

Enables decoupled, scalable, and resilient communication.

Other options:

Serverless design # A runtime execution model, not a messaging pattern.

Request-driven design # Synchronous, not asynchronous.

Hexagonal design # A software architecture pattern, not messaging-driven.

Thus, for exchanging asynchronous notifications between partners, the correct design is Event-driven design.

#### NEW QUESTION # 21

In the SAP Integration Suite, where can you change the virtual host name?

- **A. Settings APIs**
- B. Design APIs
- C. Configure ? APIs
- D. Discover - APIs

**Answer: A**

Explanation:

In the SAP Integration Suite, you can change the virtual host name in the Settings APIs. The Settings APIs allow you to configure various aspects of your API provider, such as the virtual host name, the base path, the authentication method, and the CORS

### NEW QUESTION # 22

To activate the Event Mesh (EMIS) capability in the SAP Integration Suite, which role collections must be assigned to the user performing the activation?

- A. Integration\_Administrator and Security\_Auditor
- B. Process\_orchestrator and Subaccount\_Viewer
- C. Integration\_Provisioner and Subaccount Administrator
- D. API\_Manager and Monitoring-Viewer

**Answer: C**

Explanation:

To activate Event Mesh (EMIS) capability in SAP Integration Suite, the required role collections are:

Integration\_Provisioner # Allows provisioning of new capabilities (including Event Mesh) in Integration Suite.

Subaccount Administrator # Grants permission to manage and configure subaccount-level entitlements and service activations.

Other options:

Integration\_Administrator, API\_Manager, Monitoring\_Viewer # Used for operational tasks, not provisioning.

Process\_orchestrator # Refers to on-premise PI/PO, not BTP roles.

Security\_Auditor # Auditing role, not activation.

Thus, the correct roles are Integration\_Provisioner and Subaccount Administrator.

### NEW QUESTION # 23

On which standards is OData based?

- A. TCP, AtomPub, and JSON
- B. HTTP, AtomPub, and JSON
- C. SOAP, AtomPub, and JSON

**Answer: B**

Explanation:

OData (Open Data Protocol) is a REST-based protocol standardized by OASIS and adopted widely in SAP systems.

It builds on HTTP as the communication protocol.

It uses AtomPub (Atom Publishing Protocol) and JSON as payload representation formats.

SOAP is not used for OData; instead, OData relies on REST principles.

TCP is the underlying transport layer, but OData is explicitly defined over HTTP.

Thus, the correct basis for OData is HTTP, AtomPub, and JSON.
