Reliable Salesforce Salesforce-Data-Cloud Study Plan & Valid Salesforce-Data-Cloud Test Duration

Lead2Passed offers authentic Salesforce-Data-Cloud questions with accurate answers in their Salesforce Data Cloud Accredited Professional Exam Exam practice questions file. These exam questions are designed to enhance your understanding of the concepts and improve your knowledge of the Salesforce-Data-Cloud Quiz dumps. By using these questions, you can identify your weak areas and focus on them, there by strengthening your preparation for the Salesforce Data Cloud Accredited Professional Exam (Salesforce-Data-Cloud) Exam.

To help people pass exam easily, we bring you the latest Salesforce-Data-Cloud exam prep for the actual test which enable you get high passing score easily in test. Our study materials are the up-to-dated and all Salesforce-Data-Cloud Test Answers you practiced are tested by our professional experts. Once you have well prepared with our Salesforce-Data-Cloud dumps collection, you will go through the formal test without any difficulty.

Latest Reliable Salesforce-Data-Cloud Study Plan Covers the Entire Syllabus of Salesforce-Data-Cloud

Do you want to obtain the latest information for your exam timely? Then you can choose us, since we can do that for you. Salesforce-Data-Cloud study guide of us offers you free update for 365 days, so that you can get the latest information for the exam timely. And the latest version for Salesforce-Data-Cloud exam materials will be sent to your email automatically. In addition, Salesforce-Data-Cloud Exam Materials are compiled by experienced experts who are quite familiar with the exam center, therefore the quality can be guaranteed. We have online and offline service, and if you have any questions for Salesforce-Data-Cloud exam dumps, you can consult us.

Salesforce Data Cloud Accredited Professional Exam Sample Questions (Q79-Q84):

NEW QUESTION # 79
Cloud Kicks wants to be able to build a segment of customers who have visited its website within the previous 7 days.
Which filter operator on the Engagement Date field fits this use case?

- A. Next Number of Days
- B. Greater than Last Number of
- C. Is Between
- D. Last Number of Days

Answer: D

Explanation:
The filter operator Last Number of Days allows you to filter on date fields using a relative date range that specifies the number of days before today. For example, you can use this operator to filter on customers who have visited your website in the last 7 days, or the last 30 days, or any number of days you want. This operator is useful for creating dynamic segments that update automatically based on the current date12. References:

Create Filtered Segments

NEW QUESTION # 80
Every day, Northern Trail Outfitters (NTO) uploads a summary of the last 24 hours of store transactions to a new file in an Amazon S3 bucket, and files older than 7 days are automatically deleted. Each file contains a timestamp in a standardized naming convention. What should a consultant consider when ingesting this data stream?

- A. Ensure the refresh mode is set to "Full Refresh" and the filename contains a wildcard to accommodate the timestamp
- B. Ensure the refresh mode is set to "Full Refresh" and "Refresh only new files' is selected
- C. Advise NTO to change their processes: this configuration is not supported
- D. Ensure the refresh mode is set to "Upsert" and Refresh only new files" is selected

Answer: D

Explanation:
This configuration will ensure that Data Cloud only ingests new files from the Amazon S3 bucket and updates or inserts new records into the data stream without deleting existing records. References:
https://help.salesforce.com/s/articleView?id=sf.c360_a_data_cloud_amazon_s3.htm&type=5

NEW QUESTION # 81
A customer has requested that their personal data be deleted. Which action should be performed to accommodate this request in Data Cloud?

- A. Manually delete customer and related records using the Profile Explorer
- B. Use Consent API to request deletion of the customer's information
- C. Utilize the Data Rights Subject Request tool to request deletion of the customer's information
- D. Use Ingestion API to request deletion of the customer's information

Answer: B

Explanation:
Explanation
This action should be performed to accommodate the request to delete personal data in Data Cloud. The Consent API allows you to set a consent flag for an individual that prevents further processing of their data and deletes their records from source data streams.
References:https://help.salesforce.com/s/articleView?id=sf.c360_a_data_cloud_consent_api.htm&type=5

NEW QUESTION # 82
How does Identity Resolution select attributes for Unified Individuals when there is conflicting information in the Data Model?

- A. Leverage Match Rules
- B. Create additional Contact Points
- C. Create additional Rule Sets
- D. Leverage Reconciliation Rules

Answer: D

Explanation:
Reconciliation rules are used to select attributes for Unified Individuals when there is conflicting information in the Data Model. Reconciliation rules can use different methods to prioritize values, such as source sequence, most recent value, or most frequent value. For example, if two profiles have different first names, reconciliation rules can determine which one to use for the unified profile based on the source sequence or the most recent value. References: Identity Resolution Reconciliation Rules

NEW QUESTION # 83

The recruiting team at Cumulus Financial wants to identify which candidates have browsed the jobs page on its website at least twice within the last 24 hours. They want the information about these candidates to be available for segmentation in Data Cloud and the candidates added to their recruiting system.

Which feature should a consultant recommend to achieve this goal?

- A. Calculated insight
- B. Batch bata transform
- C. Streaming insight
- D. Streaming data transform

Answer: C

Explanation:

A streaming insight is a feature that allows users to create and monitor real-time metrics from streaming data sources, such as web and mobile events. A streaming insight can also trigger data actions, such as sending notifications, creating records, or updating fields, based on the metric values and conditions. Therefore, a streaming insight is the best feature to achieve the goal of identifying candidates who have browsed the jobs page on the website at least twice within the last 24 hours, and adding them to the recruiting system. The other options are incorrect because:

A streaming data transform is a feature that allows users to transform and enrich streaming data using SQL expressions, such as filtering, joining, aggregating, or calculating values. However, a streaming data transform does not provide the ability to monitor metrics or trigger data actions based on conditions.

A calculated insight is a feature that allows users to define and calculate multidimensional metrics from data using SQL expressions, such as LTV, CSAT, or average order value. However, a calculated insight is not suitable for real-time data analysis, as it runs on a scheduled basis and does not support data actions.

A batch data transform is a feature that allows users to create and schedule complex data transformations using a visual editor, such as joining, aggregating, filtering, or appending data. However, a batch data transform is not suitable for real-time data analysis, as it runs on a scheduled basis and does not support data actions.
