CCSK exam dumps & CCSK torrent pdf & CCSK training guide

If you are going to take a CCSK Exam, nothing can be more helpful than our CCSK actual exam. Compared with other exam materials, you will definitely check out that our CCSK real test can bring you the most valid and integrated content to ensure that what you study with is totally in accordance with the Real CCSK Exam. And we give sincere and suitable after-sales service to all

our customers to provide you a 100% success guarantee to pass your exams on your first attempt.

Cloud Security Alliance CCSK (Certificate of Cloud Security Knowledge) Certification Exam is a globally recognized certification program that validates an individual's knowledge of cloud security principles, concepts, and best practices. Developed by the Cloud Security Alliance, the exam is designed to assess an individual's competence in cloud security domains such as architecture, governance, compliance, operations, and data security. Certificate of Cloud Security Knowledge v5 (CCSKv5.0) certification program is vendor-neutral and is not tied to any specific cloud service provider, making it an excellent choice for professionals looking to demonstrate their proficiency in cloud security.

To take the CCSK Certification Exam, candidates must have a basic understanding of cloud computing and related technologies. CCSK exam consists of 60 multiple-choice questions and must be completed within 90 minutes. The questions are designed to test the candidate's understanding of cloud security concepts, best practices, and techniques. CCSK exam is available online and can be taken from anywhere in the world.

Cloud Security Alliance Certificate of Cloud Security Knowledge v5 (CCSKv5.0) Sample Questions (Q67-Q72):

NEW QUESTION # 67

Why is snapshot management crucial for the virtual machine (VM) lifecycle?

- A. It enhances VM performance significantly
- B. It provides real-time analytics on VM applications
- C. It allows for quick restoration points during updates or changes
- D. It is used for load balancing VMs

Answer: C

Explanation:

Snapshots serve as recovery points, enabling quick rollback to previous states if issues arise during updates or changes. This is crucial for VM lifecycle management. Reference: [Security Guidance v5, Domain 7 - Infrastructure & Networking]

NEW QUESTION # 68

Which factor is typically considered in data classification?

- A. Storage capacity requirements
- B. Data controller
- C. Sensitivity of data
- D. CI/CD step

Answer: C

Explanation:

Data classification is a fundamental security practice used to protect sensitive information based on risk, confidentiality, integrity, and regulatory requirements.

Key Factors in Data Classification:

- * Data Sensitivity:
- * Organizations classify data based on how sensitive it is:
- * Public (e.g., marketing material).
- * Internal Use Only (e.g., business plans).
- * Confidential (e.g., financial reports).
- * Restricted/Highly Confidential (e.g., personal healthcare records, credit card details).
- * Compliance & Legal Requirements:
- * Certain data types have strict compliance laws:
- * PII (Personally Identifiable Information) # GDPR, CCPA
- * Financial Data # PCI DSS
- * Healthcare Data # HIPAA
- * Cloud providers must ensure security policies align with compliance frameworks.
- * Impact on Security Controls:
- * Highly sensitive data requires encryption at rest and in transit.
- * Access control must be enforced with least privilege and IAM policies.

- * Risk Management:
 - * Proper data classification helps organizations define security policies such as:
 - * Retention policies (How long data should be stored?).
 - * Backup and disaster recovery strategies.
- This is outlined in:
- * CCSK v5 - Security Guidance v4.0, Domain 11 (Data Security and Encryption)
 - * Cloud Controls Matrix (CCM) - Data Security and Data Classification Standards

NEW QUESTION # 69

How does serverless computing impact infrastructure management responsibility?

- A. Requires extensive on-premises infrastructure
- B. Increases workload for developers
- C. Shifts more responsibility to cloud service providers
- D. Eliminates need for cloud service providers

Answer: C

Explanation:

Serverless computing shifts infrastructure management responsibility to the CSP, allowing customers to focus on application logic rather than infrastructure. Reference: [Security Guidance v5, Domain 8 - Cloud Workload Security]

NEW QUESTION # 70

Which type of application security testing tests running applications and includes tests such as web vulnerability testing and fuzzing?

- A. Dynamic Application Security Testing (DAST)
- B. Functional Testing
- C. Unit Testing
- D. Code Review
- E. Static Application Security Testing (SAST)

Answer: A

NEW QUESTION # 71

The entity that has the primary relationship with an individual from whom his/her PII is collected is known as:

- A. Data custodian
- B. Data Manager
- C. Data processor
- D. Data Controller

Answer: D

Explanation:

The data controller (typically the entity that has the primary relationship with an individual) is prohibited from collecting and processing personal data unless certain criteria are met. For example, if the data subject has consented to the collection and proposed uses of his or her data, then the controller may collect and process data, according to the consent agreement.
