4A0-D01 Study Torrent & 4A0-D01 Free Questions & 4A0-D01 Valid Pdf

[May-2023] 4A0-AI1 exam torrent Nokia study guide [Q20-Q35]

In recent years, fierce competition agitates the forwarding IT industry in the world. And IT certification has become a necessity. If you want to get a good improvement in your career, The method that using the PassLeader's Nokia 4A0-D01 Exam Training materials to obtain a certificate is very feasible. Our exam materials are including all the questions which the exam required. So the materials will be able to help you to pass the exam.

Nokia 4A0-D01 Exam Syllabus Topics:

Topic	Details
Topic 1	• SR Linux Logging, Monitoring, and Filtering: This section of the exam measures skills of a Data Center Network Engineer and addresses how to implement logging, monitoring, and traffic filtering in SR Linux. It explains log file usage, ACL types, CPM filtering, and packet capture filters. Configuration tasks involve applying ACLs and monitoring network activity using capture tools.
Topic 2	• This section of the exam measures skills of a Network Automation Specialist and introduces the principles of Event Driven Automation in SR Linux environments. It covers integration with Kubernetes and explores core use cases such as intent-based automation for fabrics and services, as well as enhanced network observability.
Topic 3	• Nokia DC Fabric Solution: This section of the exam measures skills of a Data Center Network Engineer and covers the architecture and benefits of modern Layer 3 data center networks. It includes an overview of BGP-based routing, VXLAN and EVPN overlays for multi-tenant environments, and key features of the SR Linux operating system. The section also explains how APIs are used for external configuration and introduces the Fabric Services System's management capabilities.
Topic 4	• Module 5 – EDA (Event Driven Automation) Introduction
Topic 5	• SR Linux Configuration and Routing: This section of the exam measures skills of a Network Automation Specialist and focuses on configuring and managing SR Linux systems. It examines the YANG-driven CLI, JSON output, environment variables, and static and dynamic routing. Learners also explore BGP, ECMP, IP-VRF, MAC-VRF, and the use of VXLAN with EVPN to implement both Layer 2 and Layer 3 overlays, including symmetric and asymmetric models.

4A0-D01 Valid Braindumps Sheet & Practice 4A0-D01 Questions

Maybe there are so many candidates think the 4A0-D01 exam is difficult to pass that they be beaten by it. But now, you don't worry about that anymore, because we will provide you an excellent exam material. Our 4A0-D01 exam materials are very useful for you and can help you score a high mark in the test. It also boosts the function of timing and the function to simulate the 4A0-D01 Exam so you can improve your speed to answer and get full preparation for the test. Trust us that our 4A0-D01 exam torrent can help you pass the exam and find an ideal job.

Nokia Data Center Fabric Fundamentals Exam Sample Questions (Q23-Q28):

NEW QUESTION # 23
Which of the following statements about the IRB subinterface configuration in Nokia SR Linux is FALSE?

- A. An IP address is configured under the IRB's subinterface.
- B. One IRB subinterface is configured in a MAC-VRF network instance.
- C. One IRB subinterface is configured for each interface within a MAC-VRF network instance.
- D. An IRB subinterface is configured in an IP-VRF network instance.

Answer: C

Explanation:
In Nokia SR Linux, IRB subinterfaces are configured one per MAC-VRF network instance, not one for each interface within that instance. Multiple IRB subinterfaces per interface are not typical.

NEW QUESTION # 24
Which of the following is NOT one of the characteristics of Nokia's SR Linux?

- A. It includes a NetOgs development kit that supports the integration of third-party applications.
- B. It uses mature and stable SNMP protocol to access the command line interface.
- C. It uses an unmodified Linux kernel that simplifies the use of third party applications.
- D. It uses a modular, state-driven architecture that gives applications efficient access to system information.

Answer: B

Explanation:
Nokia's SR Linux does not rely on the SNMP protocol for accessing the command line interface; instead, it uses modern, programmable interfaces aligned with its modular architecture.

NEW QUESTION # 25
Based on the exhibit output, what CLI command can be used to display the contents of "bgp-log" in Nokia's SR Linux?

```
--{ + candidate shared default }--[ system logging ]--
A:dc-leaf-1# info
:
:
 file bgp-log {
        format "%TIMEGENERATED:::date-rfc3339% %HOSTNAME% %syslogfacility-text%|%syslogseverity-text:1:4:uppercase%
%SYSLOGTAG%%MSG:::sp-if-no-1st-sp%%MSG:::drop-last-lf%\\n"
        subsystem bgp {
        }
        subsystem netinst {
        }
    }
```

- A. show system logging file bgp-log
- B. info system logging file bgp-log
- C. info system logging buffer bgp-log

- D. show system logging buffer bgp-log

Answer: A

Explanation:
The "bgp-log" is defined as a log file in the configuration, so the correct command to display its contents is show system logging file bgp-log.

NEW QUESTION # 26
Which of the following is NOT how prefixes are typically learned and advertised in a leaf and spine data center?

- A. Each leaf router advertises the prefixes of its own locally connected servers.
- B. Spine routers learn prefixes from leaf routers directly using eBGP.
- C. Spine routers advertise learned prefixes to leaf routers directly using eBGP.
- D. Each leaf router learns the prefixes of remote servers from other leaf routers directly using eBGP.

Answer: D

Explanation:
Leaf routers do not learn prefixes from other leaf routers directly using eBGP; instead, leaf routers learn remote prefixes via spine routers. The spine acts as the route reflector or intermediary between leaf routers.

NEW QUESTION # 27
Which of the following statements about the VXLAN tunneling in data centers is FALSE?

- A. Each VXLAN tunnel endpoint is automatically assigned with a unique VNI value.
- B. VXLAN tunnel endpoints can be on hypervisors, leaf routers, or datacenter gateways.
- C. EVPN routes are exchanged between VXLAN tunnel endpoints.
- D. VLXAN tunneling is used to provide Layer 2 connectivity between workloads over a common underlay network.

Answer: A

Explanation:
VXLAN tunnel endpoints (VTEPs) are configured with VNI (VXLAN Network Identifier) values, but these VNIs are not automatically assigned; they must be explicitly configured to define Layer 2 segments.

NEW QUESTION # 28
......

You may doubt that how can our 4A0-D01 exam questions be so popular and be trusted by the customers all over the world. To creat the best 4A0-D01 study materials, our professional have been devoting all their time and efforts. They have revised and updated according to the syllabus changes and all the latest developments in theory and practice, so our 4A0-D01 Practice Braindumps are highly relevant to what you actually need to get through the certifications tests.
