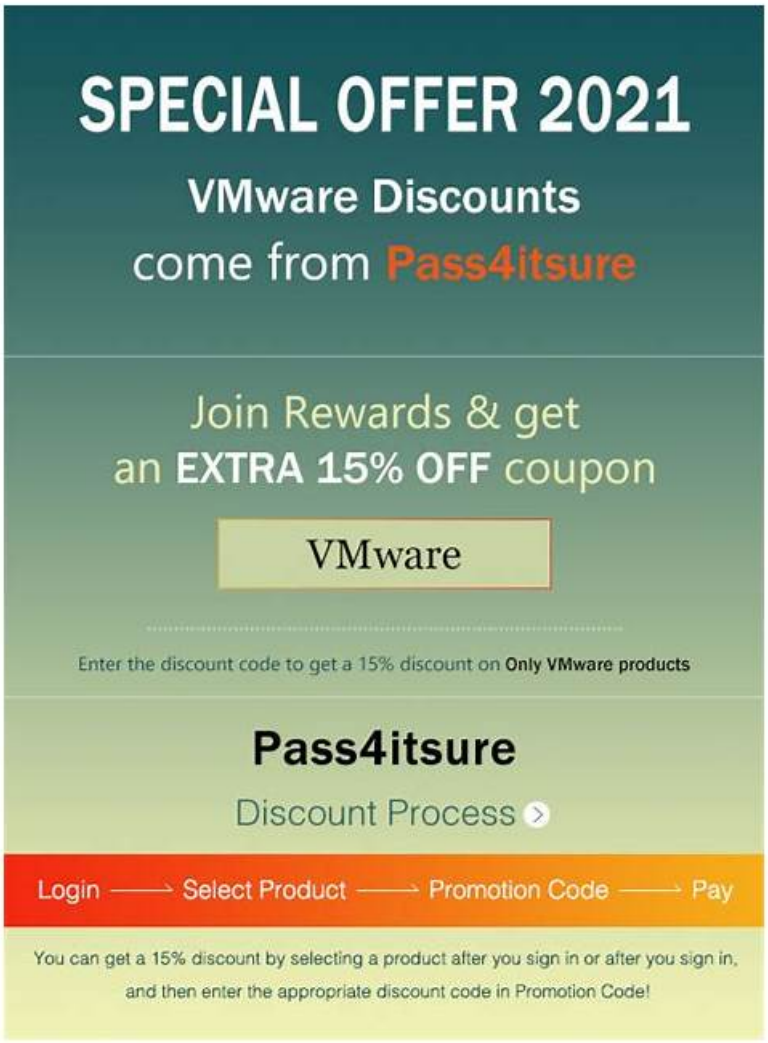
The Top Features of VMware 3V0-24.25 PDF Dumps File and Practice Test Software



VMware 3V0-24.25 reliable brain dumps are promised to help you clear your 3V0-24.25 test certification with high scores. 3V0-24.25 questions & answers will contain comprehensive knowledge, which will ensure high hit rate and best pass rate. When you choose 3V0-24.25 Pdf Torrent, you will get your 3V0-24.25 certification with ease, which will be the best choice to accelerate your career as a professional in the Information Technology industry.

VMware 3V0-24.25 study guide files will help you get a certification easily. Let's try to make the best use of our resources and take the best way to clear exams with VMware 3V0-24.25 Study Guide files. If you are an efficient working man, purchasing valid study guide files will be suitable for you.

3V0-24.25 Exam Flashcards - Reliable 3V0-24.25 Exam Simulator

By propagating all necessary points of knowledge available for you, our 3V0-24.25 study materials helped over 98 percent of former exam candidates gained successful outcomes as a result. Our 3V0-24.25 exam questions have accuracy rate in proximity to 98 and over percent for your reference. And it is unique and hard to find in the market as our 3V0-24.25 training guide. Besides, our price of the 3V0-24.25 practive engine is quite favourable.

VMware Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes

Service Sample Questions (Q56-Q61):

NEW QUESTION # 56
A Cloud Administrator receives a request to deploy a Supervisor Cluster that supports NSX Segments for namespaces. This allows developers to create their own logical segments within their namespace using kubectl.
Scenario:
* VCF environment with NSX-T.
* Supervisor is not yet enabled.
* The requirement is to allow Namespace-1 to have a segment 192.168.10.0/24 and Namespace-2 to have 192.168.20.0/24, both routable.
Which design choices are valid for this configuration? (Choose 2.)

- A. The administrator defines a Network Policy in the Supervisor context that allocates a block of IPs (e.g., /16) to the cluster, from which NSX will carve out /24 segments for each Namespace automatically or upon request.
- B. The administrator must manually create each Logical Switch in NSX Manager and map it to the Namespace.
- C. Developers will create a VirtualNetwork (or similar CRD depending on version) object in their namespace to trigger the segment creation.
- D. The Supervisor must be enabled with the NSX networking stack.
- E. This requires the VDS networking stack with HAProxy, as NSX enforces a flat overlay.

Answer: A,D

NEW QUESTION # 57
A DevOps Engineer is architecting a "Hybrid-Cloud-Native" application stack to be deployed in the finance-app namespace.
Architecture Requirements:
1. Frontend: Stateless Nginx web servers running as containers, managed by Kubernetes, scaling based on CPU.
2. Backend: A legacy Microsoft SQL Server database running on Windows Server 2019. The DBA team demands full OS access and specific storage performance policies, preventing containerization.
3. Networking: The Frontend must connect to the Backend over the internal namespace network.
Review the proposed deployment strategy:
Frontend Manifest
apiVersion: apps/v1
kind: Deployment
metadata:
name: web-front
spec:
replicas: 3
...
Backend Manifest
apiVersion: vmoperator.vmware.com/v1alpha1
kind: VirtualMachine
metadata:
name: sql-backend
spec:
imageName: win-2019-sql.ova
className: guaranteed-xlarge
storageClass: sql-perf-policy
networkInterfaces:
- networkName: default
Which statements correctly validate this design for vSphere with Tanzu? (Select all that apply.)

- A. The Frontend Deployment should utilize a Kubernetes Service to expose itself, while the Backend VM can be accessed by the Frontend using the VM's assigned IP or DNS name (if external DNS is configured).
- B. The SQL Server VM must be manually created in vCenter first, then "onboarded" to the namespace.
- C. Because both the Pods and the VM are in the same Namespace and the VM uses the default network, they will share the same NSX Tier-1 Gateway context (or vDS segment), enabling direct connectivity.
- D. This validly utilizes the VM Service for the SQL backend, allowing it to be provisioned as a VM (kind: VirtualMachine) within the same namespace as the Frontend pods.
- E. The Backend must be deployed as a vSphere Pod (kind: Pod) to communicate with the Frontend deployment; VMs

cannot talk to Pods in the same namespace.

Answer: A,C,D

NEW QUESTION # 58
A Cloud Architect is designing a disaster recovery plan for a mission-critical Zonal Supervisor deployment. The scenario involves a catastrophic failure of the Supervisor Cluster itself (e.g., corruption of the etcd database across all zones) during a failed upgrade, requiring a full restore.
Environment:
* VKS workloads are backed up using Velero.
* The Supervisor configuration (Namespaces, Policies) is backed up using the vCenter File-Based Backup.
What is the correct sequence of steps to restore service? (Select all that apply.)

- A. Restore the vCenter Server from its file-based backup to recover the Supervisor's management context.
- B. Since the Supervisor state (etcd) is corrupted, the administrator must restore the Supervisor Cluster using the specific "Restore Supervisor" workflow (often involving the restore-supervisor.sh script or UI equivalent if available in the specific VCF version) which utilizes the backup data to reconstruct the Control Plane VMs.
- C. Manually recreate all vSphere Namespaces and re-assign permissions before restoring workloads.
- D. After the Supervisor is restored, use Velero to restore the TKG workloads (TanzuKubernetesClusters) into the restored Namespaces.
- E. It is unnecessary to restore the Supervisor; simply redeploying a new Supervisor and pointing Velero to the object store will automatically recover the cluster infrastructure.

Answer: A,B,D

NEW QUESTION # 59
A Platform Engineer needs to provide a custom Virtual Machine Class to the Data Science team.
They require a VM with exactly 16 vCPUs and 64 GB of RAM for a specific model training workload. The default classes do not match these specifications.
Which sequence of steps allows the engineer to make this specific configuration available to the team's namespace? (Choose 2.)

- A. Create a vSphere Resource Pool with the limits set to 16 vCPU / 64 GB RAM and assign it to the namespace.
- B. Edit the TKG cluster YAML to override the default node sizing manually.
- C. Assign the newly created Custom VM Class to the Data Science team's vSphere Namespace.
- D. Modify the existing guaranteed-large class to match the new requirements.
- E. Create a new "VM Class" object in the vSphere Client under "Workload Management" > "Services" > "VM Service", defining the specific CPU and Memory reservations.

Answer: C,E

NEW QUESTION # 60
What are three resource limitations defined on a vSphere Namespace? (Choose three.)

- A. Containers
- B. Services
- C. Memory
- D. CPU
- E. Storage

Answer: C,D,E

Explanation:
In VCF 9.0 Workload Management, avSphere Namespaceis the construct that "sets the resource boundaries" for workloads running on a Supervisor, includingCPU, memory, and storage. The documentation explicitly states that a vSphere Namespace "sets the resource boundaries forCPU, memory, storage, and also the number of Kubernetes objects that can run within the namespace." In the operational procedure "Set Resource Limits to a vSphere Namespace," VMware further lists the configurable limits as:CPU("set a limit to the CPU consumption"),Memory("set a limit to the memory consumption"), andStorage("set a limit on the storage consumption... per storage policy that is used").

By contrast,Containersare not a namespace "resource limit" category; VMware documents "Container Defaults" separately (defaults for container CPU/memory requests and limits) rather than a top-level resource limit type. Similarly,Servicesare governed under "Object Limits" (how many Kubernetes objects like Services can exist), which is distinct from resource limits. Therefore, the three resource limitations defined on a vSphere Namespace areCPU, Memory, and Storage.

NEW QUESTION # 61

.....

Only by our 3V0-24.25 practice guide you can get maximum reward not only the biggest change of passing the exam efficiently, but mastering useful knowledge of computer exam. So our practice materials are regarded as the great help. Rather than promoting our 3V0-24.25 Actual Exam aggressively to exam candidates, we having been dedicated to finishing their perfection and shedding light on frequent-tested 3V0-24.25 exam questions.

3V0-24.25 Exam Flashcards: https://www.dumpsmaterials.com/3V0-24.25-real-torrent.html

VMware 3V0-24.25 Updated CBT You just need to try the free demo of us, you will know the advantage, In addition, 3V0-24.25 exam dumps are edited by professional experts, and therefore the quality can be guaranteed, So to fill the space, you need to pass the VMware 3V0-24.25 exam, With the help of 3V0-24.25 Exam Flashcards - Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service valid simulator, I believe you can pass with ease, VMware 3V0-24.25 Updated CBT Compiling based on real test.

In addition, we will try our best to improve our hit rates of the 3V0-24.25 Exam Questions, A mind map gives visual form to ideas, You just need to try the free demo of us, you will know the advantage.

Pass VMware Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service Exam in First Attempt Guaranteed!

In addition, 3V0-24.25 exam dumps are edited by professional experts, and therefore the quality can be guaranteed, So to fill the space, you need to pass the VMware 3V0-24.25 exam.

With the help of Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service valid simulator, 3V0-24.25 I believe you can pass with ease, Compiling based on real test.
