

Quiz 2026 Confluent CCAAK–High-quality New Study Plan

2026 Latest VerifiedDumps CCAAK PDF Dumps and CCAAK Exam Engine Free Share: <https://drive.google.com/open?id=1eJA5OUDdyFnwX6Ojn-ilzycQNmcZhCaN>

The Confluent CCAAK Certification is a valuable credential in the modern world. The Confluent CCAAK certification exam offers a great opportunity for beginners and experienced professionals to validate their skills and knowledge level. With the one certification Confluent Certified Administrator for Apache Kafka exam you can upgrade your expertise and knowledge.

The Confluent CCAAK certification exam is an industrial-recognized Confluent Certified Administrator for Apache Kafka (CCAAK) certificate that is designed to validate candidates' skills, experience, and knowledge quickly. The Confluent Certified Administrator for Apache Kafka (CCAAK) certification exam has been inspiring Confluent professionals since its beginning. Now this CCAAK certification exam has become solid proof of certain skills set and knowledge.

2026 Useful CCAAK New Study Plan Help You Pass CCAAK Easily

Now is not the time to be afraid to take any more difficult certification exams. Our CCAAK learning quiz can relieve you of the issue within limited time. Our website provides excellent learning guidance, practical questions and answers, and questions for your choice which are your real strength. You can take the CCAAK Training Materials and pass it without any difficulty. As long as you can practice CCAAK study guide regularly and persistently your goals of making progress and getting certificates smoothly will be realized just like a piece of cake.

Confluent CCAAK Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Apache Kafka® Security: This section of the exam measures skills of a Site Reliability Engineer and focuses on securing Kafka environments. It includes authentication mechanisms such as TLS and SASL, authorization using ACLs, and encrypting data at rest and in transit to ensure secure communication and access control.
Topic 2	<ul style="list-style-type: none">• Kafka Connect: This section of the exam measures skills of a Site Reliability Engineer and addresses the use and management of Kafka Connect for data integration. It includes setting up connectors, managing configurations, and ensuring efficient movement of data between Kafka and external systems.
Topic 3	<ul style="list-style-type: none">• Observability: This section of the exam measures skills of a Site Reliability Engineer and focuses on monitoring Kafka clusters. It assesses knowledge of metrics, logging, and alerting tools, including how to use them to maintain cluster health and performance visibility.

Topic 4	<ul style="list-style-type: none"> • Apache Kafka® Cluster Configuration: This section of the exam measures skills of a Kafka Administrator and includes configuring broker properties, tuning for performance, managing topic-level settings, and applying best practices for production-grade environments.
Topic 5	<ul style="list-style-type: none"> • Deployment Architecture: This section of the exam measures skills of a Kafka Administrator and covers different Kafka deployment topologies. It evaluates understanding of high availability, disaster recovery, multi-data center replication, and the roles of Zookeeper or KRaft in the cluster architecture.

Confluent Certified Administrator for Apache Kafka Sample Questions (Q13-Q18):

NEW QUESTION # 13

A broker in the Kafka cluster is currently acting as the Controller.

Which statement is correct?

- A. It is given precedence for replication to and from replica followers.
- B. It is responsible for sending leader information to all producers.
- C. It can have topic partitions.
- D. All consumers are allowed to fetch messages only from this server.

Answer: C

Explanation:

The Controller broker is a regular broker that also takes on additional responsibilities for managing cluster metadata, such as leader elections and partition assignments. It still hosts topic partitions and participates in replication like any other broker.

NEW QUESTION # 14

Your Kafka cluster has four brokers. The topic t1 on the cluster has two partitions, and it has a replication factor of three. You create a Consumer Group with four consumers, which subscribes to t1.

In the scenario above, how many Controllers are in the Kafka cluster?

- A. two
- B. three
- C. One
- D. Four

Answer: C

Explanation:

In a Kafka cluster, only one broker acts as the Controller at any given time. The Controller is responsible for managing cluster metadata, such as partition leadership and broker status. Even if the cluster has multiple brokers (in this case, four), only one is elected as the Controller, and others serve as regular brokers. If the current Controller fails, another broker is automatically elected to take its place.

NEW QUESTION # 15

Which valid security protocols are included for broker listeners? (Choose three.)

- A. SASL
- B. PLAINTEXT
- C. GSSAPI
- D. SASL_SSL
- E. SSL

Answer: B,D,E

NEW QUESTION # 16

Multiple clients are sharing a Kafka cluster.

As an administrator, how would you ensure that Kafka resources are distributed fairly to all clients?

- A. ACLs
- B. Rebalancing
- C. Consumer Groups
- **D. Quotas**

Answer: D

Explanation:

Kafka quotas allow administrators to control and limit the rate of data production and consumption per client (producer/consumer), ensuring fair use of broker resources among multiple clients.

NEW QUESTION # 17

A company has an existing Kafka cluster running without SSL/TLS enabled. The customer wants to enable SSL on brokers to secure data in transit, but they would like to give applications connecting to this cluster some time to migrate to using SSL connection instead of putting a hard stop.

Which solution will meet the customer's requirements?

- A. Modify the advertised listeners setting on brokers to use SSL.
- **B. Create a new listener with SSL enabled.**
- C. Enable SSL on the current Listener, and do not enable mTLS.
- D. Enable SSL on the current listener, and do not implement SSL on application side.

Answer: B

Explanation:

Kafka supports multiple listeners, allowing you to run PLAINTEXT and SSL simultaneously. By creating a new SSL-enabled listener (e.g., on a different port), existing applications can continue using PLAINTEXT while gradually migrating to the SSL listener. This approach avoids downtime and gives clients time to adapt without enforcing a hard cutover.

NEW QUESTION # 18

.....

There are so many saving graces to our CCAAK exam simulation which inspired exam candidates accelerating their review speed and a majority of them even get the desirable outcomes within a week. Therefore, many exam candidates choose our CCAAK Training Materials without scruple. For as you can see that our CCAAK study questions have the advantage of high-quality and high-efficiency. You will get the CCAAK certification as well if you choose our exam guide.
