VMware Advanced VMware Cloud Foundation 9.0 Operation Sample Questions (Q51-Q56):

NEW QUESTION # 51

A customer is confusing "VCF Automation" (formerly vRealize Automation) with "Automation Central" in VCF Operations. Which statement accurately distinguishes the role of Automation Central?

- A. Automation Central is an embedded feature of VCF Operations focused strictly on scheduling resource optimization tasks (Reclamation/Rightsizing) for existing objects.
- B. Automation Central is the engine used to deploy Kubernetes clusters on vSphere with Tanzu.
- C. Automation Central is a paid add-on that provides a Self-Service Catalog for users to request new VMs.
- D. Automation Central is a workflow design canvas that allows creating complex, multi-step provisioning scripts using Python.

Answer: A

NEW QUESTION # 52

A VCF Operations cluster is running with 8 nodes (the maximum for the current sizing standard used by the customer). The environment continues to grow, and the cluster is hitting CPU contention.

Constraints

- Scale-Out limit reached (per internal policy).
- Current Node Size: Medium (8 vCPU).

Goal

Increase compute capacity without adding more VM instances (nodes).

Which scaling method is applicable?

- **A. Vertical Scale-Up: Shut down the cluster, increase the vCPU and RAM settings on all nodes to the "Large" or "Extra Large" specification, and restart.**
- B. Deploy a second separate VCF Operations cluster and use Federation.
- C. There is no solution; data must be deleted.
- D. Enable "Hyper-Threading" on the VCF Operations application settings.

Answer: A

NEW QUESTION # 53

An administrator needs to configure an alert for "Failed Login Attempts". However, occasional failures are normal. The alert should ONLY trigger if there are more than 10 failures within a 5-minute window.

Which type of User Defined Alert configuration supports this logic?

- **A. An Aggregation Alert (or Grouping Alert). By changing the alert type to perform a count aggregation (e.g., Count of events > 10) over a defined time period (5 minutes), the system filters out noise and only notifies on volume anomalies.**
- B. A "Content Pack" alert.
- C. An "Event Type" alert.
- D. A "Match Any" alert (Real-Time).

Answer: A

NEW QUESTION # 54

A Cloud Admin is designing a monitoring strategy for a "Dark Site" (No Internet Access) Workload Domain. The design includes deploying Telegraf agents on guest VMs for application monitoring.

Constraints

- Guest VMs are on an isolated network with NO route to the VCF Operations Analytics Cluster.
- Guest VMs CAN route to a local management subnet within the Dark Site.
- A Cloud Proxy is deployed on that local management subnet.

How should the architect design the data flow to enable Application Monitoring?

- A. Install a second NIC on every Guest VM connected to the Management Network to talk directly to the Analytics Cluster.
- **B. Configure the Telegraf Agents to use the local Cloud Proxy as their Gateway/Endpoint. The Cloud Proxy will bridge the isolated Guest network and the central Analytics Cluster.**
- C. Deploy a NAT Gateway on the Edge Router to allow Guest VMs to reach the internet-based VMware SaaS collectors.
- D. Use a "Store and Forward" USB drive mechanism to manually import metrics.

Answer: B

NEW QUESTION # 55

A "Delete Snapshots" job configured in Automation Central failed to run for several VMs in the "Production" cluster.

Job History

Status: Failed

Error Details: "The object is currently in a Maintenance Schedule."

What does this error indicate about the interaction between Automation Central and VCF Operations maintenance capabilities?

- A. The VMs were powered off, so they could not be modified.
- B. The Automation Central service crashed.

- C. The job failed because the "Snapshot Delete" action is not supported on Production clusters.
- D. Automation Central respects Maintenance Schedules defined in VCF Operations. If an object falls within an active maintenance window (e.g., "No Actions allowed"), the scheduled job skips that object to prevent disrupting ongoing manual maintenance.

Answer: D
