For this task, you need to update Salesforce Certified Hyperautomation Specialist Exam (ADX-350) preparation material to get success.

Salesforce Certified Hyperautomation Specialist Exam Sample Questions (Q35-Q40):

NEW QUESTION # 35

AnyAirlines has a MuleSoft Composer flow between NetSuite and Salesforce. One of the data elements coming from NetSuite is a string that needs to be put into a Boolean field in a Salesforce object.

Which Composer function should be used to change the datatype of the value?

- A. substitute()
- B. today()
- C. fromStringToBoolean()
- D. fromBooleanToString()

Answer: C

Explanation:

To convert a string from NetSuite into a Boolean field in a Salesforce object within MuleSoft Composer, you should use the fromStringToBoolean() function:

Function Purpose:

The `fromStringToBoolean()` function is specifically designed to convert string values to Boolean values. It interprets common Boolean strings like "true", "false", "yes", "no" and converts them into their corresponding Boolean values.

Usage:

Within MuleSoft Composer, use this function in a transformation step to ensure the data coming from NetSuite (as a string) is correctly transformed into a Boolean value before it is mapped to the Salesforce object.

Example:

If the string value from NetSuite is "true", `fromStringToBoolean("true")` will convert this to true in the Boolean field in Salesforce.
MuleSoft Composer Functions Documentation

NEW QUESTION # 36

A Salesforce admin for AnyAirlines constructs a MuleSoft Composer flow that retrieves a record based on a unique ID using the Get Records action from a Salesforce connector. They will use the result to send a Slack message.

How can they achieve this task?

- A. 1. Add an If/Else Block after the Salesforce action step, which contains a branch checking if the Salesforce action step returned exactly one record.
- B. 1. Add a For Each loop after the Salesforce action step iterating over the collection of Salesforce records.
- **C. 1. Add a Slack action step after the Salesforce action step.**
- D. 1. Add a Slack action step after the Salesforce action step.

Answer: C

Explanation:

- * Salesforce Action Step: Start by adding a Salesforce action step that uses the Get Records action to retrieve the record based on a unique ID. This action retrieves the specific record needed.
- * Add Slack Action Step: After retrieving the record, add a Slack action step. This step will be used to send the message to Slack.
- * Use the Record: Use the retrieved record directly to construct the message in the Slack action step. This ensures the message contains the relevant information from the Salesforce record.
- * No Need for Collection Handling: Since the Get Records action retrieves a single record based on a unique ID, there is no need to handle collections or iterate through records.

NEW QUESTION # 37

An employee at AnyAirlines uses RPA Recorder to capture actions performed when carrying out a business process automation. How does this help expedite RPA process development?

- A. BPMN is autogenerated with complete test plans and run configurations that can be executed in the test and production phases.
- **B. BPMN is autogenerated, which includes documentation in the form of images and a complete recording of keyboard actions and wait times.**
- C. BPMN is autogenerated with documentation and workflows containing the recorded actions that are automatically created during the build phase.
- D. BPMN is autogenerated, including documentation in the form of images and a fully functional RPA process with workflows and conditional branching.

Answer: B

Explanation:

Using RPA Recorder to capture actions performed during a business process automation helps expedite RPA process development in the following way:

Autogenerating BPMN:

The RPA Recorder captures the business process as it is performed and autogenerates a Business Process Model and Notation (BPMN) diagram. This diagram includes a visual representation of the process, making it easier to understand and modify.

Detailed Documentation:

Along with the BPMN, the recorder generates detailed documentation that includes images of the steps performed, as well as a complete recording of keyboard actions and wait times. This provides a comprehensive view of the process, which can be reviewed and refined.

Expediting Development:

By automating the creation of BPMN and detailed documentation, the RPA Recorder significantly reduces the time required to

document and design the RPA process manually. This allows developers to focus on refining and optimizing the process rather than starting from scratch.

NEW QUESTION # 38

The MuleSoft development team at Northern Trail Outfitters creates a Mule application that interacts with several APIs and RPA processes. The team needs to share this application with other teams to help them create similar applications.

How should the Mule application be published in Anypoint Exchange to meet this requirement?

- A. Custom asset
- **B. Template asset**
- C. Connector asset
- D. API asset

Answer: B

Explanation:

To share a Mule application that interacts with several APIs and RPA processes with other teams for creating similar applications, publishing it as a Template asset is the best approach:

Template Asset:

A Template in Anypoint Exchange is designed to provide a reusable solution that can be easily adapted for different use cases. It includes predefined integration logic and configurations that can be used as a starting point for new projects.

By publishing the Mule application as a Template, other teams can leverage this pre-built solution, customize it to their specific needs, and ensure consistency in integration practices across the organization.

Anypoint Exchange Templates Documentation

NEW QUESTION # 39

Northern Trail Outfitters develops an API to look up manufacturer rebates. This API will be consumed internally by the website's backend and the RPA bots used by its customer service representatives.

How should this API be shared within the organization?

- A. The API asset should be published to the public Exchange portal.
- **B. The API asset should be published to the private Exchange portal.**
- C. The API's RAML specification should be stored in a SharePoint repository.
- D. Example assets should be published to the private Exchange.

Answer: B

Explanation:

To effectively share an API internally within an organization, publishing the API asset to the private Exchange portal is the best approach:

Private Exchange Portal:

The private Exchange portal within MuleSoft Anypoint Platform is designed for sharing APIs, connectors, templates, and other assets within an organization. It provides a central repository that is accessible to all relevant teams and departments.

Access Control and Security:

By using the private Exchange, you can control access to the API, ensuring that only authorized internal users, such as the website's backend team and customer service representatives using RPA bots, can consume it.

Ease of Use:

Publishing to the private Exchange makes it easy for internal teams to discover, access, and reuse the API, promoting consistency and reducing duplication of effort.
