Highlighted Features of Fortinet FCSS_SOC_AN-7.4 Exam Practice Questions

The Fortinet FCSS_SOC_AN-7.4 certification exam is a valuable credential that often comes with certain personal and professional benefits. For many Fortinet professionals, the FCSS - Security Operations 7.4 Analyst (FCSS_SOC_AN-7.4) certification exam is not just a valuable way to boost their skills but also FCSS - Security Operations 7.4 Analyst certification exam gives them an edge in the job market or the corporate ladder. There are other several advantages that successful Fortinet FCSS_SOC_AN-7.4 Exam candidates can gain after passing the Fortinet FCSS_SOC_AN-7.4 exam.

Fortinet FCSS - Security Operations 7.4 Analyst Sample Questions (Q69-Q74):

NEW QUESTION # 69

Review the following incident report.

An unauthorized attempt to gain access to your network was detected. The attacker used a tool to identify system versions and services running on various ports. The attacker likely used this information to exploit a known vulnerability on an outdated SSH server. SSH server access attempts have been blocked, the server has been patched, and an investigation is underway to identify the attacker and assess the potential impact of the attack.

Which two MITRE ATT&CK tactics are captured in this report? (Choose two.)

- A. Reconnaissance
- B. Execution
- C. Defense Evasion
- D. Privilege Escalation

Answer: A,B

NEW QUESTION # 70

In the context of SOC automation, how does effective management of connectors influence incident management?

- A. It simplifies the process of handling incidents by automating data exchanges
- B. It reduces the importance of cybersecurity training
- C. It decreases the effectiveness of communication channels
- D. It increases the need for paper-based reporting

Answer: A

NEW QUESTION # 71

Which FortiAnalyzer connector can you use to run automation stitches?

- A. FortiOS
- B. FortiCASB
- C. Local
- D. FortiMail

Answer: A

Explanation:

* Overview of Automation Stitches:

* Automation stitches in FortiAnalyzer are predefined sets of automated actions triggered by specific events. These actions help in automating responses to security incidents, improving efficiency, and reducing the response time.

* FortiAnalyzer Connectors:

* FortiAnalyzer integrates with various Fortinet products and other third-party solutions through connectors. These connectors facilitate communication and data exchange, enabling centralized management and automation.

* Available Connectors for Automation Stitches:

* FortiCASB:

* FortiCASB is a Cloud Access Security Broker that helps secure SaaS applications. However, it is not typically used for running automation stitches within FortiAnalyzer.

NEW QUESTION # 72

Refer to the exhibits.

Event Handler

The screenshot shows the FortiMail interface for configuring a custom event handler. The top section displays the event handler details: Name is 'SOC SMTP Enumeration Data Handler', Status is 'Active', and Description is empty. The MITRE Domain is listed as 'MITRE Domain' and the MITRE Tech ID is 'MITRE Tech ID'. The 'Automation Stitch' section shows a status of 'N/A'. The 'Data Selector' section is titled 'SOC SMTP Enumeration Data Selector'. The 'Rules' section contains a single rule named 'SOC Antispam Rule 1'. The interface includes a search bar and a list of selected log entries: 'T1589 Gather Victim Identity Information' and 'T1589.002 Email Addresses'. A note indicates '2 entries selected'. The Fortinet logo is visible in the top left corner, and the total log count '0/1024' is in the top right corner.

You configured a custom event handler and an associated rule to generate events whenever FortiMail detects spam emails.

However, you notice that the event handler is generating events for both spam emails and clean emails.

Which change must you make in the rule so that it detects only spam emails?

- A. In the Log filter by Text field, type type==spam.
- B. In the Log Type field, select Anti-Spam Log (spam)**
- C. In the Trigger an event when field, select Within a group, the log field Spam Name (snane) has 2 or more unique values.
- D. Disable the rule to use the filter in the data selector to create the event.

Answer: B

Explanation:

Understanding the Custom Event Handler Configuration:

The event handler is set up to generate events based on specific log data.

The goal is to generate events specifically for spam emails detected by FortiMail.

Analyzing the Issue:

The event handler is currently generating events for both spam emails and clean emails.

This indicates that the rule's filtering criteria are not correctly distinguishing between spam and non-spam emails.

Evaluating the Options:

Option A: Selecting the "Anti-Spam Log (spam)" in the Log Type field will ensure that only logs related to spam emails are considered. This is the most straightforward and accurate way to filter for spam emails.

Option B: Typing type==spam in the Log filter by Text field might help filter the logs, but it is not as direct and reliable as selecting the correct log type.

Option C: Disabling the rule to use the filter in the data selector to create the event does not address the issue of filtering for spam logs specifically.

Option D: Selecting "Within a group, the log field Spam Name (snane) has 2 or more unique values" is not directly relevant to filtering spam logs and could lead to incorrect filtering criteria. Conclusion:

The correct change to make in the rule is to select "Anti-Spam Log (spam)" in the Log Type field. This ensures that the event handler only generates events for spam emails.

Reference: Fortinet Documentation on Event Handlers and Log Types.

NEW QUESTION # 73

What is a key objective of managing outbreak alert handlers in a SOC?

- A. To minimize the impact of false positives
- **B. To quickly contain and mitigate threats**
- C. To ensure seamless business operations
- D. To increase sales and marketing efforts

Answer: B
