

Dumps HPE7-A06 Download | Exam HPE7-A06 Book

BONUS!!! Download part of Exam-Killer HPE7-A06 dumps for free: <https://drive.google.com/open?id=1L72qv6IJCPi8AUWuI9Y-L9myR5idwPOK>

If you want to pass HP HPE7-A06 exam and get a high paying job in the industry; if you are searching for the perfect HPE7-A06 exam prep material to get your dream job, then you must consider using our HPE Campus Access Switching Expert Written Exam exam products to improve your skillset. We have curated new HPE7-A06 Questions Answers to help you prepare for the exam. It can be your golden ticket to pass the HP HPE7-A06 test on the first attempt. We are providing latest HPE7-A06 PDF question answers to help you prepare exam while working in the office to save your time.

Our Exam-Killer's HPE7-A06 test training materials can test your knowledge, when you prepare for HPE7-A06 test; and can also evaluate your performance at the appointed time. Our HPE7-A06 exam training materials is the result of Exam-Killer's experienced IT experts with constant exploration, practice and research for many years. Its authority is undeniable. If you have any concerns, you can first try HPE7-A06 PDF VCE free demo and answers, and then make a decision whether to choose our HPE7-A06 dumps or not.

Exam HP HPE7-A06 Book - Online HPE7-A06 Training Materials

We hope you can find the information you need at any time while using our HPE7-A06 study materials. In addition to the content updates, our system will also be updated for the HPE7-A06 training materials. If you have any opinions, you can tell us that our

common goal is to create a product that users are satisfied with. We have three different HPE7-A06 Exam Braindumps for you to choose: the PDF, Software and APP online. And the varied displays can help you study at any time and condition.

HPE Campus Access Switching Expert Written Exam Sample Questions (Q85-Q90):

NEW QUESTION # 85

Refer to the exhibit and code sample.

What is the effect when you add the statement "neighbor 10.2.0.3 send-community both" to the ipv4 address family? (Choose two.)

- A. It causes R1 to negotiate for the ability to import and export all type-1 and type-2 communities with R2.
- B. The feature will be enabled without consequence to the R1 established session with R2.
- C. It causes R1 to allow the exchange of communities with NLRI records in both inbound and outbound direction.
- D. It causes R1 to negotiate the ability to send and receive standard and extended communities with R2.
- E. It will cause existing BGP peering between R1 and R2 to flap.

Answer: C,D

Explanation:

The send-community both command ensures that both standard and extended BGP communities are sent to the neighbor, and this capability is negotiated during session setup.

The send-community both command enables the router to attach community attributes to BGP NLRI updates in both directions, not just outbound.

NEW QUESTION # 86

Refer to the exhibit.

XYZ Company has deployed a multi-area OSPF AS where all the routers are operating an AOS- CX switches. Engineers want to join their proposed Area 3 to their existing backbone through ABR1 as per the exhibit.

Which script would help facilitate this solution?

ABR3(config)# router ospf 1

- A. ABR3(config-ospf-1)# area 3 virtual-link 10.255.0.1
ABR1(config)# router ospf 1
ABR1 (config-ospf-1)# area 1 virtual-link 10.255.0.3
ABR3(config)# router ospf 1
- B. ABR3(config-ospf-1)# area 1 virtual-link 10.255.0.1
ABR1(config)# router ospf 1
ABR1(config-ospf-1)# area 1 virtual-link 10.255.0.3
ABR3(config)# router ospf 1
- C. ABR3(config-ospf-1)# area 3 virtual-link 10.0.0.0/16 10.255.0.1
ABR1(config)# router ospf 1
ABR1(config-ospf-1)# area 1 virtual-link 10.1.128.0/17 10.255.0.3

Answer: B

Explanation:

An OSPF virtual link must be configured in the common transit area between the two ABRs - in this case, area 1 - pointing to the peer's router ID on each ABR (area 1 virtual-link 10.255.0.1 on ABR3 and area 1 virtual-link 10.255.0.3 on ABR1).

NEW QUESTION # 87

Drag and Drop Question

Match the network technology to the customer requirement.

Answer:

Explanation:

VSX enables active-active link aggregation across switches. VXLAN encapsulates Layer 2 traffic to extend it over Layer 3

networks across sites. VNI (VXLAN Network Identifier) distinguishes Layer 2 segments inside VXLAN overlays. EVPN simplifies configuration and automates control-plane signaling for VXLAN tunnels between sites.

NEW QUESTION # 88

Exhibit.

VSX cluster is already configured. Your task is to validate a correct configuration for the Edge-1 switch that is connected to a CCTV provider that will install its switching infrastructure. The CCTV switches do not support STP.

What needs to be configured on the Edge-1 switch ports connecting to CCTV-SW1 and CCTV-SW2 to prevent loop problems with the existing setup with automatic recovery features?

- A. configure spanning-tree and TCN-guard timeout for CCTV switch ports
- **B. configure spanning-tree with bpduguard timeout values for CCTV switch ports**
- C. configure spanning-tree with udld for CCTV switch ports
- D. configure lag with lacp fallback for CCTV switch ports

Answer: B

Explanation:

The requirement is to prevent loops on Edge-1 switch ports connected to third-party CCTV switches that do not support STP. The solution must also include an automatic recovery feature if a port gets disabled.

* Loop Prevention without STP: When connecting to non-STP devices, standard STP loop prevention (like BPDU Guard) might not work if the connected device doesn't send BPDUs. AOS-CX offers a feature called loop-protect which sends probes to detect loops in non-STP environments.

* Automatic Recovery: Features that disable ports (like BPDU Guard or Loop Protect) often have a timeout or auto-recovery option (port-disable-timer for Loop Protect) allowing the port to automatically re-enable after a configured period.

* Analysis of Options:

* A: LACP fallback applies to LAGs, not general loop prevention.

* B: TCN-guard is an STP feature, irrelevant here.

* C: Suggests spanning-tree with bpduguard timeout. BPDU Guard detects loops by listening for BPDUs, which these CCTV switches don't send. However, the timeout feature does provide the required automatic recovery mechanism if the port were disabled by BPDU Guard.

* D: UDLD detects unidirectional links, not typically bridging loops caused by topology.

* Re-evaluation: The ideal AOS-CX feature is loop-protect with port-disable-timer. Since this isn't explicitly an option, we must evaluate the given choices. Option C is the only one that mentions a mechanism (bpduguard timeout) providing automatic recovery from a disabled state. While BPDU Guard isn't the right detection mechanism here, it's the closest fit regarding the auto-recovery requirement. It's possible the question implicitly assumes some stray BPDUs might trigger it or that it's the intended "best fit" answer despite the detection mechanism mismatch.

* Conclusion: Given the options, Option C is the most plausible because it includes the timeout feature associated with bpduguard, fulfilling the automatic recovery requirement, even though BPDU guard itself is not the ideal detection method for loops involving non-STP devices.

References: AOS-CX Spanning Tree Protocol Guide (BPDU Guard, Timeout), AOS-CX Interface Configuration Guide (loop-protect feature). This relates to "Switching" (19%) and "Network Resiliency and virtualization" (8%) objectives.

NEW QUESTION # 89

A customer has configured eBGP peering using local AS 65000 with two routers from a CX 6300 VSF stack with the following switch ports:

[ports connecting to router - 1 10.10.10.2]

[ports connecting to router - 2 ip 10.10.20.2]

The LAGs are connected to third-party L2 switches, which are used as a transit network for the eBGP routers. To optimize the possible BGP peering issues, the AOS-CX switch is configured with the global settings:

What needs to be done on the AOS-CX switch to enable the bidirectional forwarding with the eBGP peers?

- A. ☐
- B. ☐
- C. ☐
- **D. ☐**

Answer: D

Explanation:

BFD is a fast failure detection protocol. Enabling fail-over bfd under the LAG interface used for BGP peering ensures that BGP will react immediately to a link failure detected by BFD, even if the LAG is still up at the logical level. This prevents blackholing and routing issues.

NEW QUESTION # 90

.....

Achieving the HP HPE7-A06 certificate is an excellent way of paying your way in the tech field. However, to become HP HPE7-A06 certified, you will have to crack the HP HPE7-A06 exam. This is a challenging task since preparation for the HP HPE7-A06 Exam demands an inside-out understanding of HPE7-A06 domains and many HP HPE7-A06 test applicants do not have enough time due to their busy routines.

Exam HPE7-A06 Book: <https://www.exam-killer.com/HPE7-A06-valid-questions.html>

HP Dumps HPE7-A06 Download we are glad to help you solve your problem, HP Dumps HPE7-A06 Download Do I receive a receipt, Through looking at the demos the clients can understand part of the contents of our HPE7-A06 exam reference, the form of the questions and answers and our software, then confirm the value of our HPE7-A06 test guide, Simulation tests before the formal Exam HPE7-A06 Book - HPE Campus Access Switching Expert Written Exam Answers Real Questions examination are necessary, and also very effective.

By understanding the design primitives of architecture and HPE7-A06 the way in which you can create, document, plan, and analyze these artifacts, you can master this critical skill.

Web services are not just for large organizations, we are Reliable HPE7-A06 Dumps Free glad to help you solve your problem, Do I receive a receipt, Through looking at the demos the clients can understand part of the contents of our HPE7-A06 Exam Reference, the form of the questions and answers and our software, then confirm the value of our HPE7-A06 test guide.
