The Salesforce Analytics-Con-201 exam questions are real and updated and will repeat in the upcoming Salesforce Analytics-Con-201 Exam Dumps. By practicing again and again you will become an expert to solve all the Salesforce Analytics-Con-201 exam questions completely and before the exam time.

Salesforce Certified CRM Analytics and Einstein Discovery Consultant Sample Questions (Q92-Q97):

NEW QUESTION # 92

Which statement best describes how to ensure CRM Analytics dashboards are easily used across both desktop and mobile devices?

- A. Create multiple layouts and reorder all the widgets so that they fit nicely within the new default width
- B. Create multiple layouts and allow CRM Analytics to automatically select and organize dashboard contents to be optimal for the device type.
- **C. Create multiple layouts, ensure the layout selectors match the device, and resize/hide widgets to ensure the content is appropriate for the device screen size.**

Answer: C

Explanation:

To ensure that CRM Analytics dashboards are optimally usable on both desktop and mobile devices, creating multiple layouts tailored to each device type is crucial. Here's why Option C is the best approach:

* Device-Specific Layouts: By creating specific layouts for each device type, you ensure that the dashboard contents are presented in a manner best suited to the screen size and interaction model of the device.

* Layout Selectors: These are used to automatically display the appropriate layout based on the device accessing the dashboard, enhancing user experience without manual intervention.

* Widget Customization: Resizing or hiding certain widgets for specific device layouts ensures that the dashboard remains clean, uncluttered, and easy to navigate, regardless of the device used.

NEW QUESTION # 93

CRM Analytics users at Cloud Kicks are granted access to an app with specific dashboards. When trying to download a specific widget, they are unable to do so.

- A. The dashboard has been created for internal use and the users have a view only license.
- B. The users have access to the dashboard but not the dataset.
- **C. The permission set for the users is missing the download data permission.**

Answer: C

NEW QUESTION # 94

Universal Containers wants to create two dashboards and has two user groups. The 'Regional Performance' dashboard should be accessible to sales reps and managers/executives to keep track of how sales reps are performing in each region. Sales reps must only be able to see data pertaining to their respective region. The 'National Performance' dashboard is using the same data as the other dashboard but should only be accessible to managers/executives to compare data across all regions.

In addition to row-level security to view only regional data, how should a consultant ensure that sales reps are unable to view the 'National Performance' dashboard?

- **A. Create one dataset, two apps; store 'Regional Performance' dashboard and dataset in one app; and provide access to both user groups to this app. Store 'National Performance' dashboard in another app and only provide access to managers/executives.**
- B. Create one dataset, one app; store both 'Regional Performance' dashboard, 'National Performance' dashboard, and dataset in the app; and provide access to both user groups to this app. Use row-level security to restrict sales reps from seeing data in 'National Performance' dashboard.
- C. Create two datasets, one app; store both 'Regional Performance' dashboard, 'National Performance' dashboard, and dataset in the app; and provide access to both user groups to this app.

Answer: A

NEW QUESTION # 95

A company wants to create a timeline chart to visualize the evolution of its Closed Won opportunities.

What are the required parameters to build a lens that displays output similar to the image shown?

- A. 1 measure, 1 grouping by a date field, and either 0-1 groupings if trellis is disabled, or 0-2 groupings if trellis is enabled
- B. 1 measure, 1-2 groupings if trellis is disabled, or 1-4 groupings if trellis is enabled
- C. 1 measure, 0 groupings if trellis is disabled, or 0-2 groupings if trellis is enabled

Answer: A

Explanation:

To create a timeline chart similar to the one shown, the following parameters are typically required:

- * 1 Measure: This could be the count of Closed Won opportunities or any other relevant metric that needs to be tracked over time.
- * 1 Grouping by a Date Field: This is essential to plot the timeline effectively. The date field would typically be the close date of the opportunities.
- * Additional Groupings: Depending on the complexity and the detail needed, additional groupings can be added. For example, grouping by region or product line can provide more insights into the timeline. If trellis is used, it allows for the creation of multiple smaller charts within the main chart, each representing a slice of data based on the additional groupings. This setup helps visualize the evolution of Closed Won opportunities over time, making it easy to spot trends, seasonal patterns, or other relevant insights.

NEW QUESTION # 96

Universal Containers plans to upload target data from an external tool to CRM Analytics so it can calculate the sales team target attainments.

The target data changes every month, so the datasets need to be updated on a monthly basis. The target data is a CSV file that contains the Salesforce ID of the sales rep, the target amount, and the month of the target. For each sales rep, the file contains a target for every month of the current year as well as all previous years.

Based on this information, which operation should a consultant use with the Analytics External Data API to upload the file?

- A. Update
- B. Overwrite
- C. Append

Answer: B

Explanation:

For uploading target data that changes on a monthly basis and includes historical data (previous years' targets), the appropriate operation is "Overwrite." This ensures that each time the CSV file is uploaded, the existing data in the dataset is replaced with the new data. This is critical because the target data includes both current and historical data, and using "Overwrite" will update the entire dataset while maintaining historical accuracy.

"Append" would add new data without replacing the old records, leading to duplication, and "Update" is not suitable for completely replacing data in this context.

NEW QUESTION # 97

.....

It was a Xian coach byword that if you give up, the game is over at the same time. The game likes this, so is the exam. Not having enough time to prepare for their exam, many people give up taking IT certification exam. However, with the help of the best training materials, you can completely pass Salesforce Analytics-Con-201 test in a short period of time. Don't you believe in it? DumpsMaterials real questions and answers are the materials that it can help you get high marks and pass the certification exam. Please try it.
