

Three Versions Of Updated AAVSB VTNE Exam Dumps

VTNE PREP COMBINED, AAVSB Practice Tests Exam with Questions and Multiple Choices and Verified Answers Latest Updated 2025

(c) Systolic blood pressure - CORRECT ANSWERS The pressure in the systemic arteries during ventricular contraction is:

- (a) Diastolic blood pressure
- (b) Osmotic pressure
- (c) Systolic blood pressure
- (d) Low pressure

(b) SA node, AV node, bundle of His, Purkinje fibers - CORRECT ANSWERS In what order does the impulse for depolarization travel through the heart?

- (a) AV node, SA node, bundle of His, Purkinje fibers
- (b) SA node, AV node, bundle of His, Purkinje fibers
- (c) SA node, AV node, Purkinje fibers, bundle of His
- (d) AV node, SA node, Purkinje fibers, bundle of His

(a) Pylorus - CORRECT ANSWERS The muscular sphincter located between the stomach and the duodenum is the:

- (a) Pylorus
- (b) Cardia
- (c) Chyme
- (d) Rugae

(a) Threshold - CORRECT ANSWERS When a stimulus is strong enough to cause complete depolarization, it has reached:

- (a) Threshold
- (b) Repolarization
- (c) Refractory period
- (d) Action potential

We understand the difficulty of finding the latest and accurate VTNE questions. In today's competitive world, it is essential to prepare with the most probable AAVSB in VTNE exam dumps to stay ahead of the competition. That's why we have created our updated AAVSB VTNE Questions, which will help you to clear the Veterinary Technician National Exam (VTNE) exam in one go.

We boost the expert team to specialize in the research and production of the VTNE guide questions and professional personnel to be responsible for the update of the study materials. We keep a close watch at the change of the popular trend among the industry and the latest social views so as to keep pace with the times and provide the clients with the newest VTNE Study Materials resources. And clients are our gods and the clients' satisfaction with our VTNE guide material is the biggest resource of our happiness. So why you still hesitated? Go and buy our VTNE guide questions now.

Excellent Premium VTNE Exam & Leader in Qualification Exams & Trusted AAVSB Veterinary Technician National Exam

If you're still learning from the traditional old ways and silently waiting for the test to come, you should be awake and ready to take the exam in a different way. Study our VTNE training materials to write "test data" is the most suitable for your choice, after recent years show that the effect of our VTNE guide dump has become a secret weapon of the examinee through qualification examination, a lot of the users of our VTNE guide dump can get unexpected results in the examination. It can be said that our VTNE study questions are the most powerful in the market at present, not only because our company is leader of other companies, but also because we have loyal users. VTNE training materials are not only the domestic market, but also the international high-end market. We are studying some learning models suitable for high-end users. Our research materials have many advantages.

AAVSB Veterinary Technician National Exam Sample Questions (Q198-Q203):

NEW QUESTION # 198

Which of the following devices is an example of an intermittent monitoring device?

- A. Capnography
- **B. Esophageal stethoscope**
- C. Pulse oximetry
- D. Electrocardiography

Answer: B

Explanation:

An esophageal stethoscope is used to intermittently monitor the patient's heart and lung sounds. These devices are inexpensive and simple to operate, though they do not determine heart rhythm.

Electrocardiography, pulse oximetry, and capnography are continuous devices because they continue to obtain monitoring data independently.

NEW QUESTION # 199

All of the following scenarios would cause concern, suggesting that one of the lab machines may require recalibration and quality control evaluation, except:

- A. HCT that is 5 times the Hb concentration
- **B. HCT that is 3 times the Hb concentration**
- C. Flags on the printed results on several of the values
- D. Values not compatible with life

Answer: B

Explanation:

Correct answer: HCT that is 3 times the Hb concentration

When equipment malfunctions, you use an expired cartridge for some tests. False results may occur when the blood has a micro clot and for various other reasons. Recognizing a problem early and quickly will prevent false results on more than one animal and ensure you take action as soon as feasible.

Signs you may have a problem with calibration and/or quality control include:

*Flags on the printed results on several of the values

*Values not compatible with life

*HCT that is 5 times the Hb concentration or another abnormal result or relationship between other blood parameters Remember that we can obtain the HCT concentration by multiplying the Hb by a factor of 3. (Or we can obtain the Hb by dividing the HCT by 3). Thus, if we were to find a Hb, say of 5, we should see a HCT of 15%. However, if we see a HCT that reads 25%, this should give us pause. Which parameter is false? Why is there a discrepancy? Can any of the other values be believed?

When abnormalities such as the discrepancy above occur or the machine flags the results, you need to be comfortable deciding on possible causes and rectifying the problem. If the abnormal factor is the HCT, and you have not yet run a PCV/TS, you can do so. Remember that the HCT and PCV are similar. The primary difference is that a HCT is machine calculated while the PCV is manually determined. But these values should be within 3 to 5% of each other. If the PCV reads 25% while the HCT reads 15%, then we know there is a problem. Calibration, rerunning the sample, checking for error codes in the machine, and other options should be promptly evaluated.

NEW QUESTION # 200

Severe sepsis may result in which of the following?

- **A. Hypotension**
- B. Decreased blood lactate
- C. Hyperglycemia
- D. Bradycardia

Answer: A

Explanation:

Severe sepsis results in hypotension (low blood pressure) and poor organ perfusion. Sepsis is frequently complicated by significant whole body inflammation called systemic inflammatory response syndrome (SIRS).

Sepsis does not result in hyperglycemia, bradycardia, or decreased blood lactate level. Instead, hypoglycemia, tachycardia, and elevated blood lactate levels are commonly observed.

NEW QUESTION # 201

Which joints are evaluated by PennHIP radiographs?

- A. Stifle joint
- B. Temporomandibular joint (TMJ)
- C. Atlantooccipital joint
- D. Coxofemoral joint

Answer: D

Explanation:

PennHIP radiographs evaluate for laxity within the coxofemoral joints (hips).

The PennHIP technique is not used for the stifle (knee), jaw (TMJ), or where the head joins the neck (atlantooccipital joint).

NEW QUESTION # 202

When performing a positive contrast radiographic study, how do exposure settings need to be changed as compared to the survey images?

- A. No changes necessary
- B. Slightly decreased
- C. Slightly increased
- D. It varies such that a consistent answer isn't possible

Answer: C

Explanation:

Exposure settings will need a slight increase with positive contrast studies. Similarly, exposure settings will be decreased with negative contrast studies.
