They have been engaged in research on the development of the industry for many years, and have a keen sense of smell for changes in the examination direction. Experts hired by Professional-Cloud-Database-Engineer exam questions not only conducted in-depth research on the prediction of test questions, but also made great breakthroughs in learning methods. With Professional-Cloud-Database-Engineer training materials, you can easily memorize all important points of knowledge without rigid endorsements. With Professional-Cloud-Database-Engineer Exam Torrent, you no longer need to spend money to hire a dedicated tutor to explain it to you, even if you are a rookie of the industry, you can understand everything in the materials without any obstacles. With Professional-Cloud-Database-Engineer exam questions, your teacher is no longer one person, but a large team of experts who can help you solve all the problems you have encountered in the learning process.

Google Cloud Certified - Professional Cloud Database Engineer Sample Questions (Q26-Q31):

NEW QUESTION # 26
Your digital-native business runs its database workloads on Cloud SQL. Your website must be globally accessible 24/7. You need to prepare your Cloud SQL instance for high availability (HA). You want to follow Google-recommended practices. What should you do? (Choose two.)

- A. Schedule automated backups.
- B. Configure single zone availability for automated backups.
- C. Create a PostgreSQL database on-premises as the HA option.
- D. Set up manual backups.
- E. Enable point-in-time recovery.

Answer: A,E

Explanation:
D) Enable point-in-time recovery - This feature allows you to restore your database to a specific point in time. It helps protect against data loss and can be used in the event of data corruption or accidental data deletion. E. Schedule automated backups - Automated backups allow you to take regular backups of your database without manual intervention. You can use these backups to restore your database in the event of data loss or corruption.

NEW QUESTION # 27
You are a DBA on a Cloud Spanner instance with multiple databases. You need to assign these privileges to all members of the application development team on a specific database:
Can read tables, views, and DDL
Can write rows to the tables
Can add columns and indexes
Cannot drop the database
What should you do?

- A. Assign the Cloud Spanner Admin role.
- B. Assign the Cloud Spanner Database User role.
- C. Assign the Cloud Spanner Database Reader and Cloud Spanner Backup Writer roles.
- D. Assign the Cloud Spanner Database Admin role.

Answer: B

Explanation:
https://cloud.google.com/spanner/docs/iam#spanner.databaseUser

NEW QUESTION # 28
You use Python scripts to generate weekly SQL reports to assess the state of your databases and determine whether you need to reorganize tables or run statistics. You want to automate this report but need to minimize operational costs and overhead. What should you do?

- A. Create a Cloud Function, and call the Cloud Function using Cloud Scheduler.
- B. Create a Cloud Function, and call the Cloud Function from a Cloud Tasks queue.
- C. Create a VM in Compute Engine, and run a cron job.
- D. Create a Cloud Composer instance, and create a directed acyclic graph (DAG).

Answer: A

Explanation:
Cloud Scheduler triggers actions at regular fixed intervals, whereas Cloud Tasks triggers actions based on how the individual task object is configured. Reference: https://cloud.google.com/tasks/docs/comp-tasks-sched

NEW QUESTION # 29

Your organization has a ticketing system that needs an online marketing analytics and reporting application.
You need to select a relational database that can manage hundreds of terabytes of data to support this new application. Which database should you use?

- A. Cloud Spanner
- B. Bigtable
- C. BigQuery
- D. Cloud SQL

Answer: C

NEW QUESTION # 30

You are managing a mission-critical Cloud SQL for PostgreSQL instance. Your application team is running important transactions on the database when another DBA starts an on-demand backup. You want to verify the status of the backup. What should you do?

- A. Perform the gcloud sql operations list command.
- B. Check the cloudsql.googleapis.com/postgres.log instance log.
- C. Use the Google Cloud Console.
- D. Use Cloud Audit Logs to verify the status.

Answer: A

Explanation:
https://cloud.google.com/sql/docs/postgres/backup-recovery/backups#troubleshooting-backups Under Troubleshooting: Issue: "You can't see the current operation's status." The Google Cloud console reports only success or failure when the operation is done. It isn't designed to show warnings or other updates. Run the gcloud sql operations list command to list all operations for the given Cloud SQL instance.

NEW QUESTION # 31

......

Our Professional-Cloud-Database-Engineer learning materials provide multiple functions and considerate services to help the learners have no inconveniences to use our product. We guarantee to the clients if only they buy our Professional-Cloud-Database-Engineer study materials and learn patiently for some time they will be sure to pass the Professional-Cloud-Database-Engineer test with few failure odds. The price of our product is among the range which you can afford and after you use our study materials you will certainly feel that the value of the product far exceed the amount of the money you pay. Choosing our Professional-Cloud-Database-Engineer Study Guide equals choosing the success and the perfect service.
