

C_DBADM_2601 Latest Test Camp & Latest Test C_DBADM_2601 Discount

BTW, DOWNLOAD part of Pass4Leader C_DBADM_2601 dumps from Cloud Storage: https://drive.google.com/open?id=1yUODs86QbtLlhwxacL_ds2wQKeSfTJNS

With years of experience in compiling top-notch relevant SAP C_DBADM_2601 dumps questions, we also offer the SAP C_DBADM_2601 practice test (online and offline) to help you get familiar with the actual exam environment. Therefore, if you have struggled for months to pass SAP C_DBADM_2601 Exam, be rest assured you will pass this time with the help of our SAP C_DBADM_2601 exam dumps. Every C_DBADM_2601 exam candidate who has used our exam preparation material has passed the exam with flying colors.

SAP C_DBADM_2601 Exam Syllabus Topics:

Section	Weight	Objectives
Topic 1: Database Administration and Configuration	11% - 20%	- System configuration and parameters - User and authorization management - Resource management and allocation
Topic 2: Monitoring and Troubleshooting	11% - 20%	- Problem diagnosis and resolution - Performance analysis and optimization - Monitoring tools and metrics
Topic 3: Migration and Integration	11% - 20%	- Data movement and replication - Migration to SAP HANA Cloud - Integration with SAP systems
Topic 4: SAP HANA Architecture and Deployment	11% - 20%	- Architecture components and concepts - Deployment options: on-premise and cloud - Installation and upgrade procedures
Topic 5: Database Security	11% - 20%	- Security settings and encryption - Data protection and access control - Audit and compliance
Topic 6: Backup and Recovery	11% - 20%	- High availability and disaster recovery - Backup strategies and execution - Recovery procedures and scenarios

Latest Test C_DBADM_2601 Discount & Reliable C_DBADM_2601 Exam Test

As a main supplier for C_DBADM_2601 Certification Exam training, Pass4Leader's C_DBADM_2601 experts continually provide you the high quality product and a free online customer service, but also update the exam outline with the fastest speed.

SAP Certified - Database Administrator - SAP HANA Sample Questions (Q115-Q120):

NEW QUESTION # 115

CHALLENGE 1 - UAT Configuration Evidence Reconciliation

A database administrator proposes accepting the UAT comparison now and adding a note that one configuration value was documented outside the current record. Which response is most defensible?

- A. Ignore the note because the release note already proves the configuration is approved.
- **B. Require the current administration record to reflect the active value before comparison acceptance.**
- C. Move the value review to the cloud migration workstream to avoid release delay.
- D. Accept the note because it acknowledges the difference without delaying UAT.

Answer: B

Explanation:

Feedback:

The current administration record should reflect the active value before the comparison is accepted. A note may identify the evidence source, but it does not replace an aligned operational record.

NEW QUESTION # 116

A manufacturing firm uses SAP HANA Cloud for analytics and an on-premises SAP HANA system for operational reporting. After a weekend parameter change, users report that a recurring operational report now completes, but much more slowly than before. Monitoring shows the database is available, CPU is elevated during the report window, and memory consumption remains within expected limits. A junior administrator proposes increasing system resources immediately.

The team lead wants the least disruptive action first because the slowdown affects only one workload pattern, not the entire database. The administrators can review runtime indicators and configuration settings through the available administration tools. Which action is the best first step?

- A. Restart the affected database so that the report executes with a clean runtime state and lower CPU utilization.
- B. Increase database resources first because the higher CPU usage proves the current sizing is no longer sufficient.
- **C. Compare the changed configuration with current workload behavior and validate whether the parameter shift altered execution characteristics for that report pattern.**
- D. Roll back the recent parameter change immediately without validating whether it is linked to the report slowdown.

Answer: C

Explanation:

Feedback:

The artifact pattern is selective degradation: one recurring report slows down, while the database remains available and memory stays normal. That points to a configuration-to-execution effect, not a broad platform failure. The best first step is to correlate the recent parameter change with workload behavior and validate whether execution characteristics changed for that report pattern. This keeps disruption low and follows the constraint of targeted diagnosis before broad corrective action.

NEW QUESTION # 117

A regional port authority uses SAP HANA for vessel movement analytics. The administrator reviews the backup process after a change to the backup destination path. SAP HANA cockpit shows that the scheduled backup job completed, but the follow-up validation step cannot locate the generated backup file in the location recorded for recovery operations. The backup catalog contains a new entry, yet the storage review shows that the file was written to a temporary path used during testing. The constraint is that the administrator must confirm that new backups are created in the recoverable destination before accepting the schedule. The team cannot rely on catalog entry creation alone.

What should the administrator do next?

- A. Correct the backup destination to the approved recovery path, run a new backup, and validate file retrieval from that path.
- B. Accept the backup because the catalog contains a new completed backup entry.
- C. Increase the number of scheduled backup attempts so a later job writes to the correct recovery location.
- D. Restart SAP HANA cockpit so the catalog entry and storage path can synchronize automatically.

Answer: A

NEW QUESTION # 118

CHALLENGE 4 - Recovery Validation Before Hypercare Closure

A full backup completed after the SAP HANA upgrade, and business reporting has remained available for several days. Recovery validation is scheduled, but the sponsor wants to close hypercare early. What is the best administration decision?

- A. Close hypercare now and perform recovery validation only if the next reporting cycle has disruption.
- B. Replace recovery validation with additional monitoring because reporting availability is the main business indicator.
- C. Close hypercare because backup completion and availability together prove operational continuity.
- D. Complete recovery validation before final hypercare closure, using the completed backup as supporting evidence.

Answer: D

Explanation:

Feedback:

Recovery validation should be completed before final hypercare closure because backup completion alone does not prove recoverability. The completed backup supports validation, but closure needs evidence that continuity can be restored if required.

NEW QUESTION # 119

CHALLENGE 4 - Release Recoverability Evidence Gate

Backups completed for the upgraded reporting system and the newly installed UAT database before testing began. Recovery validation for the UAT database is scheduled but not complete, and the upgraded system has only backup completion evidence. What should happen before final UAT sign-off supports release approval?

- A. Approve sign-off because completed backups are enough for release continuity.
- B. Perform recovery validation only if reporting becomes unavailable during UAT.
- C. Complete recovery validation and document startup behavior for the release systems.
- D. Replace recovery validation with dashboard availability because this is not production cutover.

Answer: C

Explanation:

Feedback:

Recovery validation and startup behavior should be completed before UAT sign-off supports release approval. Backup completion supports continuity planning, but it does not prove recoverability.

NEW QUESTION # 120

.....

Pass4Leader's pledge to customers is that we can help customers 100% pass their IT certification exams. The quality of Pass4Leader's product has been recognized by many IT experts. The most important characteristic of our products is their pertinence. It only takes 20 hours for you to complete the training course and then easily pass your first time to attend SAP Certification C_DBADM_2601 Exam. You will not regret to choose Pass4Leader, because choosing it represents the success.
