NEW QUESTION # 45

When designing a new VxRail solution using VxRail Sizer, what is the default Compression Filter ratio when enabling compression on VxRail vSAN?

- A. 2.1:1
- B. 1.3:1
- C. 2:1
- D. 3.1:1

Answer: C

Explanation:

In the VxRail Sizing Tool, when enabling compression on VxRail vSAN, the default Compression Filter ratio is set to 2:1. This means that the tool assumes a 2:1 data reduction ratio due to compression, effectively halving the storage requirements for the specified workload. This default setting helps in estimating the storage capacity needed for the deployment, though actual compression ratios may vary based on the specific data characteristics.

NEW QUESTION # 46

A VxRail architect is planning to deploy a new cluster. The servers equipped with two network cards with different uplink speeds between the two cards.

What vSphere Distributed Switch design should be used to ensure the highest performance and security?

- A. Resource-intensive networks like vSAN assigned to higher speed uplinks
- B. Two new vSphere Distributed Switches
- C. A predefined network profile with 4x10 Gb or 4x25 Gb interface speed
- D. Guest VM traffic assigned only to a single top of rack switch

- E. Maximum Transmission Unit set to 9000

Answer: A

Explanation:

Assigning resource-intensive networks like vSAN to the higher speed uplinks ensures that critical traffic benefits from the best available network performance, optimizing throughput and maintaining security by separating traffic types appropriately.
