## NETA 2 Exam Test With Correct Answers

Under what considerations can tag out without lock out be permitted? - Answer \*\*\*&If an energy isolating device is not capable of being locked

For PV systems, a(n) \_\_\_\_\_ is a device that changes direct-current input to an alternating-current output. - Answer Inverter

Identify the contact pictured above. (NC and NO separated by a node) - Answer Form C

When applying personal protective grounds, which end is attached first? - Answer \*\*\*&The equipment end

An induction motor has 40kVA input power, a power factor of 82 percent, and an efficiency of 92 percent. What is the horsepower? - Answer \*\*\*&30.2 HP

How many connection points would you expect to find on a kelvin bridge? - Answer 4

You arrive at a job to perform acceptance testing on a new-indoor 15KV switch lineup. While the equipment has been installed multiple covers are off there are power conductors hanging with taped ends. What should you do? - Answer \*\*\*&Visually confirm that the source of power have already been de-energized and lock out

What is the turns ratio of a 3-phase 500kVA, 13,200-480 volt rated delta-delta transformer that is 80% loaded? - Answer \*\*\*&22,000

\*\*\*27,500

ASTM D 924 is a required acceptance test for liquid-filled transformers with natural ester insulating fluid per NETA standards. - Answer \*\*\*&True

## NETA Level 2 Certified Assistant Electrical Testing Specialist Sample Questions (Q23-Q28):

### NEW QUESTION # 23

Write three thousand forty-eight ten-thousandths in decimal form.

- A. 0.0348
- B. 3.048
- C. 30.48
- **D. 0.3048**

**Answer: D**

Explanation:

Ten-thousandths represent four decimal places. Three thousand forty-eight ten-thousandths equals:

$$3048 \div 10,000 = 0.3048$$

NETA Level 2 technicians must be comfortable with decimal placement and numerical interpretation because testing instruments frequently display values in decimal form. Misplacing a decimal point can lead to serious errors when evaluating resistance, voltage, current, or insulation values.

### NEW QUESTION # 24

Under what condition is tagout without lockout permitted according to OSHA and NETA safety practices?

- A. When the system voltage is below 50 volts
- **B. When the energy isolating device is not capable of being locked**
- C. When the employee is continuously monitoring the equipment
- D. When a supervisor authorizes tagout only

**Answer: B**

Explanation:

Lockout/tagout (LOTO) procedures are a fundamental safety requirement emphasized throughout NETA Level 2 objectives and OSHA 1910.147. Lockout is always the preferred method because it provides a physical restraint preventing unexpected energization. However, OSHA permits tagout alone only under very limited circumstances. One such circumstance is when the energy-isolating device is not capable of being locked, such as older disconnects or valves without lock provisions.

In these cases, tagout must be supplemented with additional protective measures to provide an equivalent level of safety. These measures may include removal of an isolating circuit element, blocking of a control switch, opening of an extra disconnecting device, or removal of fuses. Simply tagging equipment without addressing the lack of physical restraint is not acceptable.

NETA Level 2 technicians must understand that tagout does not provide the same level of protection as lockout. Tags are warnings only and do not physically prevent operation. Therefore, tagout alone is never permitted merely for convenience, voltage level, or supervisory permission. The inability to lock the device is the critical condition that allows tagout to be used, and even then, only with additional safeguards in place.

### NEW QUESTION # 25

On an electrical schematic, a dot on a current transformer symbol indicates:

- **A. Polarity**
- B. Burden rating
- C. Metering accuracy class
- D. Grounded side

**Answer: A**

Explanation:

The dot convention indicates polarity, showing the instantaneous current direction relationship between primary and secondary windings. Correct polarity is critical for protection schemes, differential relays, and metering accuracy. NETA Level 2 technicians must verify CT polarity during installation and commissioning to ensure correct relay operation.

### NEW QUESTION # 26

On an electrical schematic, a dot on a current transformer symbol indicates:

- A. Polarity
- B. Burden rating
- C. Metering accuracy class
- D. Grounded side

**Answer: A**

Explanation:

The dot convention indicates polarity, showing the instantaneous current direction relationship between primary and secondary windings. Correct polarity is critical for protection schemes, differential relays, and metering accuracy. NETA Level 2 technicians must verify CT polarity during installation and commissioning to ensure correct relay operation.

### NEW QUESTION # 27

Harmonics in an electrical system increase the risk of fire and electric shock.

- A. Only in high-voltage systems
- B. True
- C. False
- D. Only when neutral conductors are undersized

**Answer: B**

Explanation:

Harmonics cause increased heating in conductors, transformers, and neutral paths, which can degrade insulation and increase fire risk. They can also create unexpected voltage conditions and elevated touch potentials. NETA Level 2 technicians must recognize harmonic-related risks when evaluating system performance, especially in facilities with nonlinear loads such as VFDs and power electronics.
