ISA-IEC-62443 Test Price - ISA-IEC-62443 Training Materials

It is known to us that the error correction is very important for these people who are preparing for the ISA-IEC-62443 exam in the review stage. If you want to correct your mistakes when you are preparing for the ISA-IEC-62443 exam, the study materials from our company will be the best choice for you. Because our ISA-IEC-62443 reference materials can help you correct your mistakes and keep after you to avoid the mistakes time and time again. We believe that if you buy the ISA-IEC-62443 exam prep from our company, you will pass your exam in a relaxed state.

ISA/IEC 62443 Cybersecurity Fundamentals Specialist Sample Questions (Q155-Q160):

NEW QUESTION # 155

What are three possible entry points (pathways) that could be used for launching a cyber attack?

Available Choices (select all choices that are correct)

- A. LAN, portable media, and hard drives
- **B. LAN, portable media, and wireless**
- C. LAN, power source, and wireless OD.
- D. LAN, WAN, and hard drive

Answer: B

NEW QUESTION # 156

The Risk Analysis category contains background information that is used where?

Available Choices (select all choices that are correct)

- A. (Elements external to the CSMS
- **B. Only the Risk ID element**
- C. Only the Assessment element
- D. Many other elements in the CSMS

Answer: B

NEW QUESTION # 157

Authorization (user accounts) must be granted based on which of the following?

Available Choices (select all choices that are correct)

- A. System complexity
- **B. Specific roles**
- C. Common needs for large groups
- D. Individual preferences

Answer: B

NEW QUESTION # 158

Which statement is TRUE regarding application of patches in an IACS environment?

Available Choices (select all choices that are correct)

- A. Patches never should be applied in an IACS environment.
- B. Patches should be applied as soon as they are available.
- C. Patches should be applied within one month of availability.
- **D. Patches should be applied based on the organization's risk assessment.**

Answer: D

Explanation:

Patches are software updates that fix bugs, vulnerabilities, or improve performance or functionality. Patches are important for

maintaining the security and reliability of an IACS environment, but they also pose some challenges and risks. Applying patches in an IACS environment is not as simple as in an IT environment, because patches may affect the availability, integrity, or safety of the IACS. Therefore, patches should not be applied blindly or automatically, but based on the organization's risk assessment. The risk assessment should consider the following factors: 1 The severity and likelihood of the vulnerability that the patch addresses The impact of the patch on the IACS functionality and performance The compatibility of the patch with the IACS components and configuration The availability of a backup or recovery plan in case the patch fails or causes problems The testing and validation of the patch before applying it to the production system The communication and coordination with the stakeholders involved in the patching process The documentation and auditing of the patching activities and results References: ISA TR62443-2-3 - Security for industrial automation and control systems, Part 2-3: Patch management in the IACS environment

NEW QUESTION # 159

As related to technical security requirements for IACS components, what does CCSC stand for?

- A. Comprehensive Component Security Controls
- B. Common Component Security Constraints
- C. Centralized Component Security Compliance
- **D. Common Component Security Criteria**

Answer: D

Explanation:

CCSC stands for Common Component Security Criteria, as defined in ISA/IEC 62443-4-2. These are a standardized set of technical security requirements that apply across all component types (e.g., embedded devices, software apps, network components).

"CCSCs represent baseline technical security requirements that are commonly applicable to all IACS components, regardless of their type."

- ISA/IEC 62443-4-2:2018, Clause 4.1 - Common Component Security Criteria These requirements support consistency and interoperability in component security evaluations.
