Oracle Planning and Collaboration Cloud 2026 Implementation Professional 認定 1Z0-1066-26 試験問題 (Q134-Q139):

質問 # 134

The supply plan is not very reliable. Components often arrive early or late. A team of planners, buyers, marketers, product engineers, and materials managers are tasked to investigate. They list several possibilities that could explain their plan's poor results. If you were a member of the investigation team, which step would you recommend to help troubleshoot this serious issue?

- A. For incomplete or unreliable demand schedules, use the Planning Advisor to identify forecast accuracy issues.
- B. For incorrect or incomplete bills of materials, use the Planning Advisor to identify bill of material anomalies.
- C. For inaccurate quantity-on-hand issues, use the Planning Advisor to identify inventory accuracy improvement opportunities.
- D. For incorrect or unreliable supplier lead times, use the Planning Advisor to determine lead time accuracy.

正解: A

解説:

Supplier lead times directly impact the reliability of a supply plan. Using the Planning Advisor to assess lead time accuracy can help identify inconsistencies in expected delivery times, enabling the team to pinpoint and resolve these issues. This approach is supported by Oracle Planning and Collaboration Cloud guidelines for troubleshooting supply chain challenges MY ORACLE SUPPORT

質問 # 135

Which three statements are NOT correct regarding Manage Product Launch?

- A. It requires a historical measure to be specified.
- B. It can be used for brand new or existing items.
- C. It creates the specified new combinations during the next plan run.
- D. It must be accessed from the actions menu of a table with items.

正解: A、C、D

質問 # 136

Should value in Adjusted Shipments Forecast measure always be equal to the Final Shipments Forecast measure?

- A. Yes, if the demand plan hasn't been run again after adjustment.
- B. No, both measures will always be different.
- C. Yes, if the adjustment is made below the aggregation level at which it is viewed.
- D. Yes, if the adjustment is made at the same aggregation level at which it is viewed, or below.
- E. Yes, if the demand plan is approved and values are locked.

正解: D

質問 # 137

Which statement is NOT true about item attributes?

- A. Supply plans ignore items with the "planning method" attribute set to MPP.
- B. Many item attributes can be overridden as part of a simulation set that gets applied to a plan.
- C. The "forecast control" item attribute must be assigned if configure-to-order (CTO) items are being planned.
- D. Some item attributes can be overridden directly in the Items table for simulation purposes.

正解: A

解説:

The statement that "Supply plans ignore items with the 'planning method' attribute set to MPP" is incorrect. Items with this planning method are included as long as relevant configurations are active. All other statements are true, reflecting how item attributes interact with Oracle Planning Cloud functionalities

質問 # 138

On the plan page layout that you created, you have several graphs showing the status of the plans and the business. You see a concern in an area and you want to see the data behind it. What navigation should you use to see this data?

- A. You cannot see it from the plan landing page, and you will need to search for the data.
- B. On the table in question, go to View > Show table.
- C. Go to Actions > View Data on the graph in question.
- D. You cannot see it on the plan outputs, so you need to go into Planning Analytics and re-search the data.
- E. You cannot see it on the plan outputs, and you will need to create a new table with the information.

正解: A
