Associate-Cloud-Engineer Exam Price, Valid Study Associate-Cloud-Engineer Questions

These Google Associate Cloud Engineer Exam (Associate-Cloud-Engineer) practice exams contain all the Associate-Cloud-Engineer questions that clearly and completely elaborate on the difficulties and hurdles you will face in the final Google Associate Cloud Engineer Exam (Associate-Cloud-Engineer) exam. Google Associate Cloud Engineer Exam (Associate-Cloud-Engineer) practice test is customizable so that you can change the timings of each session. DumpsMaterials desktop Google Associate-Cloud-Engineer Practice Test questions software is only compatible with windows and easy to use for everyone.

Google Associate Cloud Engineer Exam Sample Questions (Q293-Q298):

NEW QUESTION # 293

Your coworker has helped you set up several configurations for gcloud. You've noticed that you're running commands against the wrong project. Being new to the company, you haven't yet memorized any of the projects. With the fewest steps possible, what's the fastest way to switch to the correct configuration?

- A. Run gcloud configurations list followed by gcloud configurations activate .
- B. Re-authenticate with the gcloud auth login command and select the correct configurations on login.
- C. Run gcloud config configurations list followed by gcloud config configurations activate.
- D. Run gcloud config list followed by gcloud config activate.

Answer: C

Explanation:

Explanation

as gcloud config configurations list can help check for the existing configurations and activate can help switch to the configuration.

gcloud config configurations list lists existing named configurations

gcloud config configurations activate activates an existing named configuration Obtains access credentials for your user account via a web-based authorization flow. When this command completes successfully, it sets the active account in the current configuration to the account specified. If no configuration exists, it creates a configuration named default.

NEW QUESTION # 294

You have just created a new project which will be used to deploy a globally distributed application. You will use Cloud Spanner for data storage. You want to create a Cloud Spanner instance. You want to perform the first step in preparation of creating the instance. What should you do?

- A. Configure your Cloud Spanner instance to be multi-regional
- B. Enable the Cloud Spanner API
- C. Create a new VPC network with subnetworks in all desired regions
- D. Grant yourself the IAM role of Cloud Spanner Admin

Answer: D

Explanation:

<https://cloud.google.com/spanner/docs/getting-started/set-up>

NEW QUESTION # 295

Your existing application running in Google Kubernetes Engine (GKE) consists of multiple pods running on four GKE n1-standard-2 nodes. You need to deploy additional pods requiring n2-highmem-16 nodes without any downtime. What should you do?

- A. Use gcloud container clusters upgrade.
Deploy the new services.
- B. Create a new cluster with both n1-standard-2 and n2-highmem-16 nodes.
Redeploy the pods and delete the old cluster.
- C. Create a new Node Pool and specify machine type n2-highmem-16.
Deploy the new pods.
- D. Create a new cluster with n2-highmem-16 nodes.
Redeploy the pods and delete the old cluster.

Answer: C

Explanation:

When you need to change the machine profile of your Compute Engine cluster, you can create a new node pool and then migrate your workloads over to the new node pool.

NEW QUESTION # 296

You need to create a custom VPC with a single subnet. The subnet's range must be as large as possible. Which range should you use?

- A. 0.0.0.0/0
- B. 172.16.0.0/12
- C. 10.0.0.0/8
- D. 192.168.0.0/16

Answer: C

NEW QUESTION # 297

The core business of your company is to rent out construction equipment at a large scale. All the equipment that is being rented out has been equipped with multiple sensors that send event information every few seconds. These signals can vary from engine status,

distance traveled, fuel level, and more. Customers are billed based on the consumption monitored by these sensors. You expect high throughput ?up to thousands of events per hour per device ?and need to retrieve consistent data based on the time of the event. Storing and retrieving individual signals should be atomic. What should you do?

- **A. Ingest the data into Datastore. Store data in an entity group based on the device.**
- B. Create a file in Cloud Storage per device and append new data to that file.
- C. Ingest the data into Cloud Bigtable. Create a row key based on the event timestamp.
- D. Create a file in Cloud Filestore per device and append new data to that file.

Answer: A

NEW QUESTION # 298

.....
