In order to help customers, who are willing to buy our PL-600 test torrent, make good use of time and accumulate the knowledge, Our company have been trying our best to reform and update our PL-600 exam tool. "Quality First, Credibility First, and Service First" is our company's purpose, we deeply hope our PL-600 Study Materials can bring benefits and profits for our customers. So we have been persisting in updating our PL-600 test torrent and trying our best to provide customers with the latest PL-600 study materials to help you pass the PL-600 exam and obtain the certification.

Exam PL-600: Microsoft Power Platform Solution Architect

Microsoft Power Platform solution architects lead successful implementations and focus on how solutions address the broader business and technical needs of organizations.

A solution architect has functional and technical knowledge of the Power Platform, Dynamics 365 customer engagement apps, related Microsoft cloud solutions, and other third-party technologies. A solution architect applies knowledge and experience throughout an engagement. The solution architect performs proactive and preventative work to increase the value of the customer's investment and promote organizational health. This role requires the ability to identify opportunities to solve business problems.

Solution architects have experience across functional and technical disciplines of the Power Platform. Solution architects should be able to facilitate design decisions across development, configuration, integration, infrastructure, security, availability, storage, and change management. This role balances a project's business needs while meeting functional and non-functional requirements.

Part of the requirements for: Microsoft Certified: Power Platform Solution Architect Expert

Download exam skills outline

The PL-600 Exam is a challenging exam that requires candidates to have a deep understanding of the Power Platform and its various components. Candidates must have experience with designing and developing solutions using Power BI, Power Apps, and Power Automate. They must also have a strong understanding of data modeling, security, and integration with other systems. PL-600 exam consists of 60 multiple-choice questions and has a time limit of 150 minutes.

Microsoft PL-600 exam, also known as the Microsoft Power Platform Solution Architect exam, is a certification exam designed for professionals who want to demonstrate their expertise in designing and implementing solutions that leverage the Microsoft Power Platform. The Power Platform is a suite of business applications from Microsoft that includes Power BI, Power Apps, Power Automate, and Power Virtual Agents. Passing the PL-600 exam validates your ability to design and implement solutions that leverage these applications to drive business outcomes.

PL-600 Valid Test Materials & Reliable PL-600 Test Notes

Do you always feel that your gains are not proportional to your efforts without valid PL-600 study torrent? Do you feel that you always suffer from procrastination and cannot make full use of your sporadic time? If your answer is absolutely yes, then we would like to suggest you to try our PL-600 Training Materials, which are high quality and efficiency PL-600 test tools. Your success is 100% ensured to pass the PL-600 exam and acquire the dreaming certification which will enable you to reach for more opportunities to higher incomes or better enterprises.

Microsoft Power Platform Solution Architect Sample Questions (Q146-Q151):

NEW QUESTION # 146

A client uses Dynamics 365 Sales, Power BI datasets, and Power BI dataflows.

The Dynamics 365 Sales implementation has security roles that restrict data export. You need to ensure that data has the same restrictions in Power BI as it does in Dynamics 365 Sales.

You need to design the security to avoid sensitive data from being seen.

Which two actions should you recommend? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- **A. Share Power BI dashboards only with users who are supported to see this data.**
- **B. Limit the role and ensure that exporting to Microsoft Excel is not allowed in both Dynamics 365 Sales and Power BI.**
- C. Limit the role in Dynamics 365 Sales to only data allowed so it cannot be exported to Microsoft Excel.
- D. Use Microsoft Dataverse restrictions before setting up the Power BI reports.

Answer: A,B

Explanation:

For individual reports you can click on the 'Settings' option which is the gear icon against the said report name and choose 'Export Data' to 'None'.

Reference:

<https://docs.microsoft.com/en-us/power-bi/collaborate-share/service-share-dashboards>

<https://docs.microsoft.com/en-us/business-applications-release-notes/october18/intelligence-platform/power-bi-desktop/per-report-control-data-export>

NEW QUESTION # 147

A company uses two separate unlinked apps to manage sales leads: a Power Apps app and a third-party application.

The client has the following requirements:

Manage all leads by using the Power Apps app.

Create a lead in the Power Apps app when a user creates a lead in the third-party application.

Update leads in the Power Apps app when a user updates a lead in the third-party application.

Connect to the third-party application by using an API.

You need to recommend strategies to integrate the Power Apps app and the third-party application.

Which three options can you use to achieve the goal? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Custom connector
- B. DataService connector
- C. Power Automate cloud flow
- D. Dual-write
- E. Dataflow

Answer: B,C,D

Explanation:

A: Customers should be able to adopt business applications from Microsoft and expect they speak the same language and seamlessly work together. Dual Write allows our customers to not think about these apps as different systems to write to independently; rather, the underlying infrastructure makes it seamless for these apps to write simultaneously.

D: Use Custom APIs to create your own APIs in Dataverse. With a Custom API you can consolidate a group of operations into an API that you and other developers can call in their code. The Common Data Service (current environment) connector enables calling Custom APIs actions in Power Automate.

E: Common Data Service provides access to the environment database on the Microsoft Common Data Service. It is available for Logic Apps, Power Automate, and Power Apps.

<https://docs.microsoft.com/en-us/powerapps/developer/data-platform/custom-api>

NEW QUESTION # 148

You need to recommend a solution for agents when working with customers to make reservations.

What should you recommend?

- A. Power Automate
- B. workflows
- C. task flows
- D. Business Process Flows

Answer: D

Explanation:

Explanation

Business process flows provide a guide for people to get work done. They provide a streamlined user experience that leads people through the processes their organization has defined for interactions that need to be advanced to a conclusion of some kind.

Use business process flows to define a set of steps for people to follow to take them to a desired outcome.

With business processes flows available as an entity, you can now use advanced finds, views, charts, and dashboards sourced from business process flow data for a given entity, such as a lead or opportunity.

Scenario:

Agents need a solution to replace paper reservation checklists.

Agents need dashboards to show a current count of all reservations on the entity.

Agents need a way to track reservation issues.

Agents need a visual indicator in the interface to determine the reservation step to provide a seamless customer experience.

Topic 3, Fabrikam, inc.

Case study

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each

case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Background

Fabrikam, Inc. manufactures industrial metal cutting machines. The company installs and services the machines for customers. Fabrikam has manufacturing plants in Canada, France, and China. The company also has regional service organizations that are responsible for installation and maintenance of the machines.

Current environment

Overview

Operations for the company are managed very informally. Only a small number of long-term employees are aware of all manufacturing processes. The company has been experiencing quality issues associated with its manufacturing operations and installations.

The company wants to implement a way to capture quality inspection results for each machine produced.

Current inspection checklists are stored in the Files section of a Teams channel for inspectors. Inspectors commonly print the incorrect inspection checklist.

The company has specific inspection stations for certain inspection steps. Each station has the gauges and equipment required for related inspection steps. There is often a backlog at specific inspection stations. This results in delays in shipping machines to customers.

Accounting system

The current system does not handle shop floor or manufacturing planning functionality.

Machines are assigned serial numbers and placed in stock until they are shipped to customers.

Employee information is maintained only within the accounting system. Access to the information is strictly controlled due to privacy regulations and company policies.

Other systems

The company has an enterprise Microsoft 365 subscription. The company uses Microsoft 365 only for sending and receiving email.

The company uses photos of employees to generate employee badges.

Photos are uploaded into Microsoft 365 user profiles.

The company recently started using Dynamics 365 Field Service to manage and maintain the machines that it installs for its customers. The app has not been customized.

The company has added roles, skills, and certification proficiencies to Dynamics 365 Field Service resources to support both customer onsite inspections and final manufacturing inspections.

Requirements

Quality inspection app

Fabrikam is evaluating Microsoft Power Platform to determine whether it can meet the company's requirements for a manufacturing defect and quality inspection solution. Each machine produced must be subjected to a quality inspection at various points during production. Each machine must undergo a more extensive quality inspection before the machine can be shipped to the customer.

Inspection orders

Inspection orders must:

Allow entry of quality ratings of passed or failed for each quality metric identified for the machine being rated.

Include information about the person who performed each inspection step and any comments made by the inspector.

Be automatically marked as failed if one inspection step rating is marked as failed.

Be automatically marked for re-inspection should a machine fail inspection. The new inspection order must be created by using the originating inspection order as a template.

Inspectors must fill in findings comments and upload at least one photo for any inspection step that is marked as failed.

Inspection standardization

Standardized checklists must be stored in the solution for use by inspectors. A copy must be created when a new inspection is initiated. The solution must:

Prevent an inspector from proceeding to the next step of the checklist until required information for a step is entered.

Support the addition of steps to inspections to support custom features added to a machine for a customer.

Support the direct input of measurements from testing gauges to avoid incorrect readings being entered by inspectors.

Provide a visual representation of the testing measurement limits for each step. Include an indication of how the measured value

compares to measurement limits and whether the measurement is within tolerance. Users must be able to configure the visualizations to display the minimum value and maximum value, and whether the reading is within the tolerance of a single targeted value. It must also be able to be used for maintenance inspections once the machine has been installed.

Support the ability to store photo references within each inspection step to document defects found during inspections.

Security

Users must be active employees of Fabrikam.

When a user signs into the inspection solution, the solution must display a picture of the employee who has signed in.

Supervisors must be able to modify standard checklists. Other employees must be prevented from modifying checklists.

You must prevent users from changing inspection order data once an inspection is marked as final.

Analytics and reporting

The solution must:

Provide metrics including existing and upcoming demand by inspection station, average time spent per user at a station, and average time a machine spends at each inspection point.

Provide metrics per inspector including number of inspections performed by month, and number of inspections per rating type (pass, fail).

Provide a printed quality certificate to be included with each machine.

Issues

During initial testing of the solution, testers report that they cannot see the photos taken during a previously failed inspection.

NEW QUESTION # 149

You are a Microsoft Power Platform architect.

You have identified several project risks.

You need to categorize potential risks that are specific to your customer.

How should you categorize the risks? To answer, drag the appropriate categories to the correct risks. Each category may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Categories

- Resource risk
- Business risk
- External risk
- Security risk

Answer Area

Risk

- The project requires integration to custom-built on-premises systems that store business-sensitive data.
- The organization is currently making significant go-to-market strategy adjustments.
- The customer has a limited budget in relation to the project requirements.

Category

NEW QUESTION # 150

You are supporting the go-live process for a company. The company is responsible for migrating data to the Microsoft Power Platform by using a custom solution. The company reports the following issues:

* Migration processes fail due to operation timeouts.

* Records that include lookup columns often fail to load.

You need to recommend a solution.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Issue

Migration processes fail due to operation timeouts.

Records that include lookup columns often fail to load.

Solution

Increase multithreading and/or batch size settings.

Increase multithreading and/or batch size settings.

Decrease multithreading and/or batch size settings.

Ensure you are loading data into all tables at the same time.

Ensure you are loading data into tables in a particular order.

Ensure you are loading data into tables in a specific order.

Increase multithreading and/or batch size settings.

Decrease multithreading and/or batch size settings.

Ensure you are loading data into all tables at the same time.

Ensure you are loading data into tables in a specific order.

Answer:
