HCL Software Academy HCLSoftware Certified Associate Administrator Exam - Notes/Domino 12 Sample Questions (Q19-Q24):

NEW QUESTION # 19

Which Domino document is used to define the mail routing topology between servers?

- A. Server document
- B. Domain Configuration document
- C. Connection document
- D. Person document

Answer: C

Explanation:

A Connection document is the primary tool used in the Domino Directory to define mail routing topology and replication schedules between servers. It specifies the source and destination servers, the connection type (e.g., Local Network), and the specific times when the Router should push mail or when databases should replicate between the two systems.

NEW QUESTION # 20

Which two components are accessible via the Domino Administrator Client's Files tab? (Choose two)

- A. Compact and Fixup utilities
- B. ACL management
- C. Replication tools
- D. Policy creation

Answer: A,C

Explanation:

The Files tab in the Domino Administrator Client is the central management area for database-level operations. From this tab, administrators can access replication tools to manually trigger or manage the synchronization of database replicas across servers. Additionally, it provides access to the Tools pane, where maintenance utilities like Compact (to reduce file size) and Fixup (to repair corrupted databases) are located for server-side maintenance.

NEW QUESTION # 21

In a hierarchical name like \$CN=Server1/OU=Boston/O=HCL\$ the component "OU" stands for

- A. Organizational Unit
- B. Operating Unit
- C. Organization Unit
- D. Office Unit

Answer: A

NEW QUESTION # 22

Which two factors should be considered when planning the geographical placement of Domino servers in a distributed environment? (Choose two)

- A. Time zone differences
- B. Number of mailboxes
- C. Operating system kernel version
- D. Network bandwidth and latency

Answer: A,D

Explanation:

When planning where to physically place servers in a global or distributed domain, two critical factors are Time zone differences and Network bandwidth and latency. Time zones impact the scheduling of replication and maintenance tasks to avoid peak business hours. Bandwidth and latency are vital because they determine how quickly data can be replicated between servers; poor network conditions can lead to data inconsistency and slow mail delivery between locations.

NEW QUESTION # 23

When a user is renamed, which AdminP request must complete to update ACLs across databases?

- A. Synchronize Replicas
- B. Update User Certificate
- C. Rename in ACL
- D. Rename Person in Domino Directory

Answer: C

Explanation:

The Administration Process (AdminP) handles user renames in several stages. After the user accepts the name change in their Notes

client, AdminP triggers a series of requests. The specific request responsible for searching through every database on the server and changing the user's old name to the new name in the Access Control List is the Rename in ACL request. This ensures the user retains their permissions under their new identity.
