CCRN-Adult Pass Guaranteed & Best CCRN-Adult Vce

We can promise that you would like to welcome this opportunity to kill two birds with one stone. If you choose our CCRN-Adult test questions as your study tool, you will be glad to study for your exam and develop self-discipline, our CCRN-Adult latest question adopt diversified teaching methods, and we can sure that you will have passion to learn by our CCRN-Adult learning braindump. We believe that our CCRN-Adult exam questions will help you successfully pass your CCRN-Adult exam and hope you will like our CCRN-Adult practice engine.

AACN CCRN-Adult Exam Syllabus Topics:

Topic	Details

- The endocrine, hematology, gastrointestinal, renal, and integumentary domains are also covered, focusing on conditions like diabetes mellitus, acute kidney injury, and infections. This section highlights the need for nurses to manage complex patient scenarios involving multiple systems effectively.

AACN CCRN (Adult) - Direct Care Eligibility Pathway Sample Questions (Q932-Q937):

NEW QUESTION # 932

A patient requests to be informed about all aspects of their care and wants to participate in decision-making. How should the nurse respond?

- A. The nurse should provide minimal information to avoid overwhelming the patient
- B. The nurse should explain that it is ultimately the patient's healthcare power of attorney who will make decisions
- C. The nurse should explain that the patient should rely on the healthcare team to make decisions
- **D. The nurse should respect the patient's wishes and involve them in their care**

Answer: D

Explanation:

A patient's right to be involved in their care should always be respected. It is inappropriate to deny the patient their right to autonomy and involvement in their care. The patient's healthcare power of attorney is only responsible for making decisions if the patient is unable to do so; there is no indication that this is the case in this scenario.

NEW QUESTION # 933

The nurse is caring for a newly admitted patient with worsening chronic heart failure. The nurse notes on the patient's EKG strip that the P wave in lead II is > 0.13 seconds and > 3.2 mm.

The nurse knows that these findings MOST LIKELY indicate:

- **A. Atrial hypertrophy**
- B. Ventricular hypotrophy
- C. Ventricular hypertrophy
- D. Atrial hypotrophy

Answer: A

Explanation:

The P wave represents atrial muscle depolarization. It is normally 2.5 mm or less in height and 0.11 seconds or less in duration. The P wave morphology, which is smooth and rounded, can reveal right or left atrial hypertrophy or atrial arrhythmias and is best determined in leads II and V1 during sinus rhythm.

Patient's EKG Findings Normal EKG Findings

$> 3.2 \text{ mm} \leq 2.5 \text{ mm}$

$> 0.13 \text{ seconds} \leq 0.11 \text{ seconds}$

NEW QUESTION # 934

Which of the following conditions is the result of pressure changes in the stomach that occur with severe and prolonged vomiting, causing tears in the lining of the esophagus?

- A. Gastroesophageal varices
- B. Hemorrhagic gastritis
- **C. Mallory-Weiss Syndrome (MWS)**
- D. Peptic Ulcer Disease (PUD)

Answer: C

Explanation:

Mallory-Weiss Syndrome (MWS) causes upper GI bleeding. It is a linear, non-perforating tear of the gastric mucosa near the

gastroesophageal junction (where the esophagus meets the stomach). This tear is the result of pressure changes in the stomach that occur with forceful vomiting. MWS often occurs in alcoholic patients or patients with a history of repeated emesis (vomiting). Hemorrhagic gastritis, often referred to as stress ulcers, are gastric lesions that are most commonly associated with NSAID overuse, alcohol abuse, and physiologic conditions that cause severe stress. Gastroesophageal varices are most often a consequence of portal hypertension, commonly due to cirrhosis; acute upper GI bleeding is common when these varices rupture. PUD is the most common cause of upper GI bleeding and is related to too much gastric acid and impaired GI tract mucus secretion.

NEW QUESTION # 935

Which of the following is NOT one of the main methods initially used to diagnose injury of a patient who has experienced abdominal trauma?

- A. Physical examination
- B. FAST exam
- C. CAT scan
- D. Abdominal X-ray

Answer: D

Explanation:

An abdominal X-ray would not provide significant information about many of the injuries that may occur with abdominal trauma, as many of the organs affected consist of soft tissues that will not be easily accessible by a simple single-view X-ray. A focused assessment with sonography for trauma (FAST) exam, CAT scan, and physical assessment are all important methods used to diagnose injury for someone who has experienced abdominal trauma.

NEW QUESTION # 936

For patients with acute respiratory failure, which ventilator mode is MOST likely to be used initially?

- A. Synchronized intermittent mandatory ventilation
- B. Assist-control ventilation
- C. High-frequency oscillatory ventilation
- D. Pressure support ventilation

Answer: B

Explanation:

Assist-Control (AC) ventilation is most commonly initially used for patients with acute respiratory failure because it guarantees a set number of breaths per minute while still allowing the patient to initiate breaths. Pressure support ventilation and synchronized intermittent mandatory ventilation allow more patient control and are often used in weaning. High-frequency oscillatory ventilation is typically used only for patients with severe ARDS (Acute Respiratory Distress Syndrome) who are not responding to other ventilation modes.

NEW QUESTION # 937

.....

It is a common sense that in terms of a kind of CCRN (Adult) - Direct Care Eligibility Pathway test torrent, the pass rate would be the best advertisement, since only the pass rate can be the most powerful evidence to show whether the CCRN-Adult guide torrent is effective and useful or not. We are so proud to tell you that according to the statistics from the feedback of all of our customers, the pass rate among our customers who prepared for the exam under the guidance of our CCRN (Adult) - Direct Care Eligibility Pathway test torrent has reached as high as 98% to 100%, which definitely marks the highest pass rate in the field. Therefore, the CCRN-Adult Guide Torrent compiled by our company is definitely will be the most sensible choice for you.
