Reliable Salesforce Mule-101 Exam Vce - Mule-101 Complete Exam Dumps

Candidates who crack the Mule-101 examination of the Salesforce Mule-101 certification validate their worth in the sector of information technology. The Salesforce Mule-101 credential is evidence of their talent. Reputed firms hire these talented people for high-paying jobs. To get the Salesforce Certified MuleSoft Integration Foundations (Mule-101) certification, it is essential to clear the Salesforce Certified MuleSoft Integration Foundations (Mule-101) test. For this task, you need to update Salesforce Certified MuleSoft Integration Foundations (Mule-101) preparation material to get success.

The content of our Mule-101 quiz torrent is imbued with useful exam questions easily appear in the real condition. We are still moderately developing our latest Mule-101 exam torrent all the time to help you cope with difficulties. All exam candidates make overt progress after using our Mule-101 Quiz torrent. By devoting ourselves to providing high-quality practice materials to our customers all these years, we can guarantee all content are the essential part to practice and remember. Stop dithering and make up your mind at once, Mule-101 test prep will not let you down.

Salesforce Mule-101 Exam Dumps with Guaranteed Success Result [2026]

How to get to heaven? Shortcart is only one. Which is using ExamcollectionPass's Salesforce Mule-101 Exam Training materials. This is the advice to every IT candidate, and hope you can reach your dream of paradise.

Salesforce Certified MuleSoft Integration Foundations Sample Questions (Q25-Q30):

NEW QUESTION # 25
What are two reasons why a typical Mulesoft customer favors a Mulesoft-hosted Anypoint platform runtime plane over a customer-hosted runtime for its Mule application deployments?

- A. Reduced application latency
- B. Reduced IT operations effort
- C. Increased application isolation
- D. Increased application throughput
- E. Reduced time-to-market for the first application

Answer: B,E

Explanation:
MuleSoft-Hosted Runtime (CloudHub): This is an Integration Platform as a Service (iPaaS) model where MuleSoft manages the infrastructure.
Reduced IT Operations Effort (Option A): Because MuleSoft manages the physical servers, operating system updates, and patching, the customer's IT team does not need to maintain the hardware or VM infrastructure.
Reduced Time-to-Market (Option D): With a pre-configured environment ready for deployment, teams can deploy applications immediately without waiting for the provisioning of on-premises servers, load balancers, or network configurations.

NEW QUESTION # 26
During a planning session with the executive leadership, the development team director presents plans for a new API to expose the data in the company's order database. An earlier effort to build an API on top of this data failed, so the director is recommending a design-first approach.

- A. Adding global policies to the API so all developers automatically secure the implementation before coding anything
- B. Building MUnit tests so administrators can confirm code coverage percentage during deployment
- C. Developing a specification so consumers can test before the implementation is built
- D. Publishing the fully implemented API to Exchange so all developers can reuse the API

Answer: C

Explanation:
Design-First Approach: This methodology prioritizes creating the API contract (RAML/OAS) before writing any code19.
The Benefit: By defining the specification first and publishing it to Exchange (often with a Mocking Service), API consumers (frontend developers or other teams) can test and provide feedback on the design immediately. 20This ensures the API meets business needs before the expensive work of backend implementation begins, preventing the failure described in the scenario2122.23 Why others are incorrect:
Publishing fully implemented API (C): This is a "Code-First" approach (build first, share later).
Global Policies (B): Relates to governance, not the design methodology.

NEW QUESTION # 27
According to MuleSoft's IT delivery and operating model, which approach can an organization adopt in order to reduce the frequency of IT project delivery failures?

- A. Stop scope creep by centralizing requirements-gathering
- B. Adopt an enterprise data model
- C. Decouple central IT projects from the innovation that happens within each line of business
- D. Prevent technology sprawl by reducing production of API assets

Answer: C

Explanation:
The Problem (IT Delivery Gap): Traditional IT operating models often treat IT as a centralized factory, which becomes a bottleneck. The business demands change faster than Central IT can deliver, leading to project failures or delays.
The Solution (Decoupling): MuleSoft advocates for a new operating model (C4E) where Central IT produces reusable assets (System APIs) and then "gets out of the way." Innovation at the Edge: By decoupling core IT from the Line of Business (LOB), the LOB developers can self-serve those assets to build their own Process and Experience APIs. This allows innovation to happen in parallel across the organization, rather than waiting in a single queue, thus reducing failure rates associated with bottlenecks. 1111

NEW QUESTION # 28
According to MuleSoft, which major benefit does a Center for Enablement (C4E) provide for an enterprise and its lines of business?

- A. Centrally managing return on investment (ROI) reporting from lines of business to leadership
- B. Accelerating self-service by the lines of business
- C. Centralizing project management across the lines of business
- D. Enabling Edge security between the lines of business and public devices

Answer: B

Explanation:
Center for Enablement (C4E): Unlike a Center of Excellence (CoE) which centralizes work, a C4E focuses on enablement.
Self-Service: The primary goal is to harvest reusable assets and best practices so that the Lines of Business (LOB) can build their own projects using these assets. This accelerates self-service and removes Central IT as the bottleneck13.
Why others are incorrect:
Centralizing Project Management (D): C4E promotes decentralized delivery (federation), not centralized management.

NEW QUESTION # 29

According to the National Institute of Standards and Technology (NIST), which cloud computing deployment model describes a composition of two or more distinct clouds that support data and application portability?

- A. Public cloud
- B. Community cloud
- C. Hybrid cloud
- D. Private cloud

Answer: C

Explanation:
NIST Definition: The NIST definition of Hybrid Cloud is explicitly "a composition of two or more distinct cloud infrastructures (private, community, or public) that remain unique entities, but are bound together by standardized or proprietary technology that enables data and application portability." 1 MuleSoft Context: This is highly relevant to MuleSoft's Runtime Plane options. A customer might run some apps in CloudHub (Public Cloud) and others on Runtime Fabric (Private Data Center), creating a Hybrid deployment to ensure data portability and local processing where needed.
Why others are incorrect:
Public Cloud: Open for open use by the general public (e.g., AWS, Azure).
Private Cloud: Exclusive use by a single organization.
Community Cloud: Exclusive use by a specific community of consumers from organizations that have shared concerns.

NEW QUESTION # 30

......

Have similar features to the desktop-based exam simulator Contains actual Salesforce Mule-101 practice test that will help you grasp every topic Compatible with every operating system. Does not require any special plugins to operate. Creates a Mule-101 Exam atmosphere making candidates more confident. Keeps track of your progress with self-analysis and Points out mistakes at the end of every attempt.
