Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q93-Q98):

NEW QUESTION # 93

You set up the Juniper ATP Appliance solution on your network and notice that the macOS files are not being analyzed..... malware.

In this scenario, what must you do?

- A. Under Config > System Profiles ≥ Secondary Cores workspace, enable macOS Detection.
- **B. Under Config -> System Profiles → ≥ Secondary Cores workspace, create a macOS profile**
- C. Create a macOS virtual machine on the JATP Appliance and install the secondary core software.
- D. You must obtain a Apple Mac Mini device and install the secondary core software.

Answer: B

NEW QUESTION # 94

Which two statements about SRX chassis clustering are correct? (Choose two.)

- **A. SRX chassis clustering supports active/passive and active/active for the data plane.**
- B. SRX chassis clustering only supports active/passive for the data plane.
- C. SRX chassis clustering supports active/active for the control plane.
- **D. SRX chassis clustering supports active/passive for the control plane.**

Answer: A,D

Explanation:

SRX chassis clustering allows for both active/passive and active/active configurations for the data plane.

In an active/passive setup, one node is active (handling traffic) while the other remains passive (idle and waiting to take over in case of failure). In an active/active setup, both nodes can handle traffic simultaneously, distributing different traffic flows or services between them for load balancing and redundancy.

For the control plane, SRX chassis clustering typically operates in an active/passive mode. This means one node actively handles the control plane responsibilities, such as managing routing tables and maintaining sessions, while the other stands by ready to take over these tasks if the active node fails.

NEW QUESTION # 95

Which two statements are true about the vSRX? (Choose two.)

- A. UNIX is the base OS.
- B. It does not have VMXNET3 vNIC support.
- **C. Linux is the base OS.**
- **D. It has VMXNET3 vNIC support.**

Answer: C,D

NEW QUESTION # 96

Which two statements about SRX Series device chassis clusters are true? (Choose two.)

- A. Each chassis cluster member requires a unique cluster ID value.
- B. Redundancy group 0 is only active on the cluster backup node.
- **C. Chassis cluster member devices must be the same model.**
- **D. Each chassis cluster member device can host active redundancy groups**

Answer: C,D

Explanation:

In a chassis cluster, both nodes can host active redundancy groups. The active redundancy groups can be distributed between the two nodes, depending on the configuration and failover status, allowing each node to handle traffic for different sets of services or interfaces.

For the chassis clustering to function correctly, both nodes in the cluster must be of the same model.

This requirement ensures that the hardware capabilities, such as processing power and interface compatibility, are identical, which is crucial for maintaining consistent performance and behavior between cluster nodes.

NEW QUESTION # 97

Which two statements are true about Juniper ATP Cloud? (Choose two.)

- A. Juniper ATP Cloud uses multiple antivirus software packages to analyze files.
- B. Juniper ATP Cloud does not use antivirus software packages to protect against zero-day threats.
- C. Juniper ATP Cloud uses antivirus software packages to protect against zero-day threats.
- D. Juniper ATP Cloud only uses one antivirus software package to analyze files.

Answer: A,B

Explanation:

Two statements that are true about Juniper ATP Cloud are:

Juniper ATP Cloud uses multiple antivirus software packages to analyze files: Juniper ATP Cloud is a cloud-based service that provides advanced threat prevention and detection for your network. It integrates with SRX Series firewalls and MX Series routers to analyze files and network traffic for signs of malicious activity. Juniper ATP Cloud uses multiple antivirus software packages from different vendors to scan files for known malware signatures and provide a comprehensive verdict based on their results.

Juniper ATP Cloud does not use antivirus software packages to protect against zero-day threats: Juniper ATP Cloud protects against zero-day threats by using dynamic analysis, not antivirus software packages.

Dynamic analysis is a method of executing files in a sandbox environment and observing their behavior and network interactions.

Dynamic analysis can uncover unknown malware that may evade static analysis or signature-based detection methods.
