## Fortinet FCP - FortiManager 7.6 Administrator Sample Questions (Q35-Q40):

### NEW QUESTION # 35

Refer to the exhibit. Which statement about the environment shown in the exhibit is correct?

The screenshot displays the FortiManager interface for cluster configuration. The 'Cluster Status' table shows two nodes: a Primary node (SN: FMG-VM0A16000566, IP: 10.3.106.63) and a Secondary node (SN: FMG-VM0A17002226, IP: 10.3.106.64). The Secondary node's 'Enable' checkbox is checked. The 'Cluster Settings' section shows the following configuration: Fallover Mode is Manual; Operation Mode is Primary; Peer IP and Peer SN are 10.3.106.64 and FMG-VM0A17002226 respectively; Cluster ID is 1; Heart Beat Interval is 10 seconds; Failover Threshold is 30; VRRP Interface is set to 'Click to select'; Priority is 1; Unicast is disabled; and Monitored IP is set to 'IP'.

- A. A failover will take place after five minutes without receiving heartbeat packets.
- B. FortiAnalyzer features are not enabled on this FortiManager device.

- C. You must restart the secondary unit if you promote it to become the primary.
- D. No FortiGuard packages have been synchronized between the cluster members yet.

**Answer: B**

Explanation:

If FortiAnalyzer features are enabled, you cannot add FortiAnalyzer to FortiManager. You will also not be able to configure FortiManager high availability (HA).

### NEW QUESTION # 36

Which two items does an FGFM keepalive message include? (Choose two.)

- A. FortiGate uptime
- **B. FortiGate IPS version**
- C. FortiGate license information
- **D. FortiGate configuration checksum**

**Answer: B,D**

Explanation:

Keepalive messages, including the configuration checksums, are sent from FortiGate at configured intervals. The messages also show the intrusion prevention system (IPS) version of the FortiGate device.

### NEW QUESTION # 37

An administrator notices that CLI scripts are failing on some FortiGate devices because they use different FortiOS versions. Which two actions should the administrator take to fix the failing CLI scripts? Choose two answers.

- A. Modify the CLI scripts to include conditional commands based on FortiOS version.
- **B. Create separate ADOMs for each FortiOS version.**
- C. Disable CLI scripts for devices using older firmware.
- **D. Create version-specific CLI script groups and assign them to the appropriate devices.**

**Answer: B,D**

Explanation:

The most strongly supported answer is A. The study guide explicitly states: "In the case of having multiple FortiOS firmware versions on the same ADOM, it is recommended to use separate ADOMs instead." It also says: "When you organize managed FortiGate devices, it is highly recommended that you group them based on their FortiOS firmware version. This is because valid command syntax varies by firmware version, which affects script compatibility." D is the other practical fix supported by FortiManager workflow. The study guide states that FortiManager can run scripts on multiple managed devices at once, and device groups let you run scripts on multiple devices instead of a single device. Combined with the firmware-version compatibility rule above, the correct operational approach is to keep version-specific scripts and apply them only to the matching device sets. B and C are not supported by the uploaded study guide as the recommended fix.

### NEW QUESTION # 38

An administrator has a FortiGate-HQ device with VDOMs-root, HR and Facilities, currently managed under the FortiManager ADOM-Site1. They try to move VDOM HR to the FortiManager ADOM-Site2, but it does not work.

Why is the administrator not able to move FortiGate-HQ VDOM HR to FortiManager ADOM-Site2?

- A. The administrator must delete the FortiGate-HQ device from FortiManager and add it again using the Add Device wizard before moving the VDOM.
- B. The FortiGate-HQ must be managed under the FortiManager ADOM-root to allow moving its VDOMs to different ADOMs.
- **C. FortiManager must be in ADOM normal mode, which does not allow VDOMs to be managed separately.**
- D. The administrator must have full access in the device layer of FortiGate-HQ VDOM-root before they can VDOMs to different ADOMs.

**Answer: C**

### NEW QUESTION # 39

Which two items does an FGFM keepalive message include? (Choose two.)

- A. FortiGate uptime
- **B. FortiGate IPS version**
- C. FortiGate license information
- **D. FortiGate configuration checksum**

**Answer: B,D**

Explanation:

Keepalive messages, including the configuration checksums, are sent from FortiGate at configured intervals. The messages also show the intrusion prevention system (IPS) version of the FortiGate device.
