With the pass rate is 98.65% for AD0-E725 learning materials, our product has gained popularity among candidates, the also send some thank letter for helping them pass the exam successfully. We have a professional team to research the latest information for AD0-E725 exam materials, and we can ensure that AD0-E725 Exam Dumps you receive are the latest one. What's more, AD0-E725 exam dumps are high quality, and you can pass the exam just one time. We offer you free update for 365 days after purchasing, and our system will send the update version for AD0-E725 exam dumps to you automatically.

Adobe Commerce Developer Expert Sample Questions (Q16-Q21):

NEW QUESTION # 16

A Developer connects to a Magento-Cloud CLI and creates a new branch for environment using the following Git command: `git checkout -b <branch-name>` The developer notices the branch is not activated and does not automatically build when changes are pushed to the remote environment.

Which solution will fix this issue?

- A. `magento-cloud environment:redeploy --no-wait` should be executed after branch creation.
- B. `git branch -b <branch-name>` should be used instead of Git checkout.
- C. `magento-cloud environment:branch <branch-name>` should be used instead of Git commands.

Answer: C

NEW QUESTION # 17

A Developer discovers that inline scripts are no longer working. This issue occurred after upgrading to the latest version of Adobe Commerce. When checking the console, the errors indicate that the scripts are not allowed to execute.

The following is an example script:

```
<div id="action-div" onclick="someComponent('title')">Action</div>
```

How should the Developer adapt the script to run properly according to security practices?

- A. `<?php echo $secureRenderer->renderEventListenerAsTag('onclick', 'someComponent(\'title\'), '#action- div'); ?>`
- B. `<?php echo $block->renderAllowedElement('<div id="action-div" onclick="someComponent(\'title\')">Action</div>'); ?>`
- C. `<?php echo $escaper->renderSecureTag('<div id="action-div" onclick="someComponent(\'title\')">Action</div>'); ?>`

Answer: A

Explanation:

Since Magento 2.3.5, inline JavaScript is restricted by default due to stricter Content Security Policy (CSP) enforcement.

Developers must use the `SecureHtmlRenderer` class to safely render inline event listeners.

Option C correctly uses `$secureRenderer->renderEventListenerAsTag()` to safely attach the `onclick` event listener to `#action-div`.

Options A and B are invalid or unsupported for this purpose.

Adobe Commerce DevDocs - Secure HTML rendering

NEW QUESTION # 18

A third-party company wants to integrate into Adobe Commerce by using webhooks; they would like to emulate the webhook endpoint. As part of this process, they will send payload data to a Developer for testing.

What format should the payload be as part of the webhook test command?

- **A. JSON**
- B. Plain text
- C. XML

Answer: A

Explanation:

Adobe Commerce webhooks payloads are delivered in JSON format, which is the standard for exchanging event data between Adobe Commerce and third-party systems.

B XML and C plain text are not supported formats for webhooks.

Adobe Commerce DevDocs - Webhooks

NEW QUESTION # 19

A client uses APIs on their Adobe Commerce platform and powers external programs with the data fed from the Adobe API systems. The client reports that it is becoming unmanageable to handle all the API endpoints and would like to have a centralized API system.

Which new feature will help the client with this problem?

- **A. Adobe Commerce API Mesh**
- B. Adobe I/O Events for Adobe Commerce
- C. Adobe Bulk API Handler

Answer: A

Explanation:

Adobe Commerce API Mesh provides a centralized GraphQL layer that aggregates data from multiple APIs (Commerce, third-party systems, microservices). This allows the client to interact with a single unified API endpoint, instead of managing multiple APIs individually.

A Bulk API Handler does not exist.

B Adobe I/O Events is for real-time event streaming, not API centralization.

C is correct: API Mesh is the official solution for centralized API management.

Reference:

Adobe Commerce API Mesh Overview

NEW QUESTION # 20

A client is setting up an Adobe Commerce B2B store and wants to start offering a Payment on Account option for their customers when placing orders.

How should the Developer achieve this?

- A. Create and implement a new Payment Method to provide credit accounts to customers.
- B. Repurpose the native Cash on Delivery method.
- **C. Install and activate the native Adobe Commerce module which activates payment.**

Answer: C

Explanation:

Adobe Commerce B2B includes a native "Payment on Account" module, which is part of the B2B suite. This module allows customers with company accounts to place orders on account (credit).

A (repurpose COD) is a hack and not recommended.

C (create new payment method) is unnecessary since Adobe Commerce already includes this B2B feature.

B is correct: simply enable the native B2B Payment on Account module.
