#### NEW QUESTION # 14

What is the benefit of enabling lockdown mode on VMware ESX hosts?

- A. Improves network performance.
- B. Simplifies the management of virtual machines.
- C. Increases CPU and memory resources available to virtual machines (VMs).
- D. Restricts direct access to the ESX host, enhancing security.

**Answer: D**

Explanation:

Lockdown Mode on ESXi hosts is a security feature that restricts direct login to the ESXi host.

\* Once enabled, administrators must manage the host through vCenter Server instead of direct DCUI/SSH access (except for exception users).

\* This prevents unauthorized local access and improves overall security compliance.

Other options:

\* A. Improves network performance# Not related.

\* C. Increases CPU/memory for VMs# Not related.

\* D. Simplifies VM management# It actually makes direct management more restricted.

### NEW QUESTION # 15

An administrator must configure identity access for VMware vSphere Foundation (VVF) to allow admin accounts from the enterprise Active Directory domain corp.local to log in using domain credentials. Security requires authentication to use the default Active Directory protocol, without federation.

Which configuration step is required to enable Active Directory users to authenticate to vCenter?

- A. Add the domain controller certificate to the Trusted Root store in vCenter.
- B. Configure Identity Federation using SAML with corp.local.
- **C. Add Active Directory over LDAP as an identity source.**
- D. Configure a trusted identity provider using OpenID Connect (OIDC).

**Answer: C**

Explanation:

To allow Active Directory domain users (corp.local) to authenticate in vCenter with domain credentials:

\* The correct method is configuring Active Directory over LDAP as an identity source. (D)

\* This uses the default AD protocol (LDAP/Kerberos) without requiring SAML or OIDC federation.

Other options:

\* A. Adding domain controller certificate# Needed for LDAPS but not the main step.

\* B. Identity Federation with SAML# Requires federation, not allowed per requirements.

\* C. OpenID Connect (OIDC)# Used for external IdPs, not traditional AD auth.

An administrator is tasked to configure VMware Cloud Foundation (VCF) Operations alerts to notify only relevant stakeholders when alerts trigger.

Which configuration step will satisfy the requirement?

- A. Configure notification for only critical alerts.
- B. Configure notification to write a file to an output folder.
- C. Configure notification to use generic contact information.
- **D. Configure notification to specific alert recipients.**

**Answer: D**

Explanation:

In VCF Operations, alerts can be configured with notification settings. To ensure only relevant stakeholders receive alerts:

\* You assign specific recipients to notifications.

\* This avoids alert fatigue and ensures teams only see alerts they are responsible for.

Other options:

\* A. Write to file# Not for stakeholder notifications.

\* B. Only critical alerts# Reduces volume, but still not targeted to relevant recipients.

\* D. Generic contact info# Sends to broad groups, not selective.

What are three minimum requirements to accomplish this? (Choose three.)

- A. SAS solid-state disk (SSD)
- **B. 25GbE network interfaces**
- **C. PCIe flash device (NVMe)**
- D. 10GbE network interfaces
- E. 256GB Memory
- **F. 128GB Memory**

**Answer: B,C,F**

Explanation:

For vSAN ESA (Express Storage Architecture), minimum requirements differ from OSA:

- \* 25GbE NICs are required to handle high-performance traffic. (C)
- \* NVMe PCIe flash devices must be used for storage. (D)
- \* 128GB Memory minimum per host is required. (F)

Other options:

- \* A. 10GbE# Only supported in vSAN OSA, not ESA.
- \* B. 256GB Memory# Recommended for large workloads, not minimum.
- \* E. SAS SSDs# Not supported in ESA; NVMe required.

### NEW QUESTION # 18

An administrator is tasked with creating a custom VMware Cloud Foundation (VCF) Operations Web Certificate.

What are three requirements to which the certificate must conform to be used with VCF Operations? (Choose three.)

- A. In the certificate file, the server certificate must be last in the order of certificates.
- **B. In the certificate file, all certificates and the private key must be in PEM format.**
- **C. The certificate file must include the server certificate, a private key, and all issuing certificates.**
- **D. In the certificate file, the server certificate must be first in the order of certificates.**
- E. The VCF Operations certificate cannot use the Subject Alternative Name (SAN) extension.
- F. In the certificate file, all certificates and the private key must be in PFX format.

**Answer: B,C,D**

Explanation:

VCF Operations requires that custom SSL certificates meet these requirements:

- \* Certificates and private key must be in PEM format. (A)
- \* The server certificate must be listed first in the file. (D)
- \* The file must include the server certificate, private key, and full certificate chain (issuing/intermediate/root CA). (E)

Why others are wrong:

- \* B. Server certificate last# Incorrect, it must be first.
- \* C. Cannot use SAN extension# Incorrect, SAN is supported and recommended.
- \* F. PFX format# Not supported for VCF Operations.
