Reading The Exam COF-C02 Testking Means that You Have Passed Half of SnowPro Core Certification Exam

Solutions is one of the top platforms that has been helping COF-C02 exam candidates for many years. Over this long time period countless candidates have passed their dream SnowPro Core Certification Exam exam. The COF-C02 exam questions are

designed by experience and qualified SnowPro Core Certification Exam expert. The DumpExam COF-C02 Exam Questions will not only assist you in COF-C02 exam preparation but also give you sight knowledge about the SnowPro Core Certification Exam (COF-C02) exam topics that will help you in your professional career.

Snowflake SnowPro Core Certification Exam Sample Questions (Q889-Q894):

NEW QUESTION # 889

How would you determine the size of the virtual warehouse used for a task?

- A. Since task infrastructure is based on running the task body on schedule, it's recommended to configure the virtual warehouse for automatic concurrency handling using Multi-cluster warehouse (MCW) to match the task schedule
- B. Root task may be executed concurrently (i.e. multiple instances), it is recommended to leave some margins in the execution window to avoid missing instances of execution
- C. Querying (select) the size of the stream content would help determine the warehouse size. For example, if querying large stream content, use a larger warehouse size
- D. If using the stored procedure to execute multiple SQL statements, it's best to test run the stored procedure separately to size the compute resource first

Answer: A

Explanation:

The size of the virtual warehouse for a task can be configured to handle concurrency automatically using a Multi-cluster warehouse (MCW). This is because tasks are designed to run their body on a schedule, and MCW allows for scaling compute resources to match the task's execution needs without manual intervention. NEW QUESTION # 890

What are characteristic of Snowsight worksheet? (Select TWO.)

- A. Users are limited to running only one on a worksheet.
- B. Worksheets can be grouped under folder, and a folder of folders.
- C. Users can import worksheets and share them with other users.
- D. Each worksheet is a unique Snowflake session.
- E. The Snowflake session ends when a user switches worksheets.

Answer: B,C

Explanation:

Characteristics of Snowsight worksheets in Snowflake include:

A). Worksheets can be grouped under folders, and a folder of folders: This organizational feature allows users to efficiently manage and categorize their worksheets within Snowsight, Snowflake's web-based UI, enhancing the user experience by keeping related worksheets together.

E). Users can import worksheets and share them with other users: Snowsight supports the sharing of worksheets among users, fostering collaboration by allowing users to share queries, analyses, and findings.

This feature is crucial for collaborative data exploration and analysis workflows.

NEW QUESTION # 891

Which privilege must be granted by one role to another role, and cannot be revoked?

- A. MONITOR
- B. OWNERSHIP
- C. OPERATE
- D. ALL

Answer: B

Explanation:

The OWNERSHIP privilege is unique in that it must be granted by one role to another and cannot be revoked. This ensures that the transfer of ownership is deliberate and permanent, reflecting the importance of ownership in managing access and permissions.

NEW QUESTION # 892

A Snowflake user is writing a User-Defined Function (UDF) that includes some unqualified object names. How will those object names be resolved during execution?

- A. Snowflake will only check the schema the UDF belongs to.
- **B. Snowflake will first check the current schema, and then the PUBLIC schema of the current database.**
- C. Snowflake will first check the current schema, and then the schema the previous query used
- D. Snowflake will resolve them according to the SEARCH_PATH parameter.

Answer: B

NEW QUESTION # 893

Which of the following commands cannot be used within a reader account?

- **A. CREATE SHARE**
- B. ALTER WAREHOUSE
- C. DROP ROLE
- D. DESCRIBE TABLE
- E. SHOW SCHEMAS

Answer: A

Explanation:

In Snowflake, a reader account is a type of account that is intended for consuming shared data rather than performing any data management or DDL operations. The CREATE SHARE command is used to share data from your account with another account, which is not a capability provided to reader accounts. Reader accounts are typically restricted from creating shares, as their primary purpose is to read shared data rather than to share it themselves.
