Latest Splunk Enterprise Certified Admin exam pdf & SPLK-1003 exam torrent

Getting more certifications are surely good things for every ambitious young man. It not only improves the possibility of your life but also keep you constant learning. Test ability is important for personal. But if you are blocked by this exam, our Splunk SPLK-1003 Valid Exam Practice questions may help you. If you have only one exam unqualified so that you can't get the certification. Our SPLK-1003 valid exam practice questions will help you out. We guarantee you 100% pass in a short time.

Splunk Enterprise Certified Admin Sample Questions (Q92-Q97):

NEW QUESTION # 92

A user recently installed an application to index NCINX access logs. After configuring the application, they realize that no data is being ingested. Which configuration file do they need to edit to ingest the access logs to ensure it remains unaffected after upgrade?

- \$SPLUNK_HOME/etc/apps/Splunk_TA_nginx/local/inputs.conf
- \$SPLUNK_HOME/etc/apps/Splunk_TA_nginx/default/inputs.conf
- \$SPLUNK_HOME/etc/system/default/Splunk_TA_nginx/local/inputs.conf
- \$SPLUNK_HOME/etc/users/admin/Splunk_TA_nginx/local/inputs.conf

- A. Option A
- B. Option B
- C. Option D
- D. Option C

Answer: A

Explanation:

This option corresponds to the file path "\$SPLUNK_HOME/etc/apps/splunk_TA_nginx/local/inputs.conf". This is the configuration file that the user needs to edit to ingest the NGINX access logs to ensure it remains unaffected after upgrade. This is explained in the Splunk documentation, which states:

The local directory is where you place your customized configuration files. The local directory is empty when you install Splunk Enterprise. You create it when you need to override or add to the default settings in a configuration file. The local directory is never overwritten during an upgrade.

NEW QUESTION # 93

This file has been manually created on a universal forwarder

```
/opt/splunkforwarder/etc/apps/my_TA/local/inputs.conf

[monitor:///var/log/messages]
sourcetype=syslog
index=syslog
```

A new Splunk admin comes in and connects the universal forwarders to a deployment server and deploys the same app with a new

```
inputs.conf file:

/opt/splunk/etc/deployment-apps/my_TA/local/inputs.conf

[monitor:///var/log/maillog]
sourcetype=maillog
index=syslog
```

Which file is now monitored?

- A. /var/log/messages
- B. /var/log/maillog and /var/log/messages
- C. none of the above
- D. /var/log/maillog

Answer: D

NEW QUESTION # 94

Which valid bucket types are searchable? (select all that apply)

- A. Frozen buckets
- B. Warm buckets
- C. Cold buckets
- D. Hot buckets

Answer: B,C,D

Explanation:

Hot/warm/cold/thawed bucket types are searchable. Frozen isn't searchable because its either deleted at that state or archived.

NEW QUESTION # 95

How often does Splunk recheck the LDAP server?

- A. Each time a user logs in
- B. Each time Splunk is restarted
- C. Every 5 minutes
- D. Varies based on LDAP_refresh setting.

Answer: A

Explanation:

<https://docs.splunk.com/Documentation/Splunk/8.0.6/Security/ManageSplunkuserroleswithLDAP>

NEW QUESTION # 96

The following stanza is active in indexes.conf

```
[cat_facts]
```

```
maxHotSpanSecs = 3600
```

```
frozenTimePeriodInSecs = 2630000
```

```
maxTotalDataSizeMB = 650000
```

All other related indexes.conf settings are default values.

If the event timestamp was 3739283 seconds ago, will it be searchable?

- A. Yes, only if the bucket is still hot.
- B. No, because the index will have exceeded its maximum size.
- C. Yes, only if the index size is also below 650000 MB.
- D. No, because the event time is greater than the retention time.

Answer: D

Explanation:

Explanation

The correct answer is D. No, because the event time is greater than the retention time.

According to the Splunk documentation¹, the frozenTimePeriodInSecs setting in indexes.conf determines how long Splunk software retains indexed data before deleting it or archiving it to a remote storage. The default value is 188697600 seconds, which is equivalent to six years. The setting can be overridden on a per-index basis.

In this case, the cat_facts index has a frozenTimePeriodInSecs setting of 2630000 seconds, which is equivalent to about 30 days.

This means that any event that is older than 30 days from the current time will be removed from the index and will not be searchable.

The event timestamp was 3739283 seconds ago, which is equivalent to about 43 days. This means that the event is older than the retention time of the cat_facts index and will not be searchable.

The other settings in the stanza, such as maxHotSpanSecs and maxTotalDataSizeMB, do not affect the retention time of the events.

They only affect the size and duration of the buckets that store the events.
