It is important to cover Adobe Commerce Developer Expert (AD0-E725) exam topics and check if you need to practice them. If you are talking about the Adobe AD0-E725 certification exam, you need to practice and overcome mistakes. If you do not practice for it, chances are that you might get confused while appearing for the AD0-E725 Exam. When you get the test study material, it comes with the Adobe AD0-E725 practice exams (desktop & web-based) to solve.

Adobe AD0-E725 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">External Integrations: This section of the exam measures the skills of Integration Specialists and focuses on connecting Adobe Commerce with external SaaS services. It encompasses the skills needed to customize data flows, utilize Adobe App Builder for extensibility, and implement Adobe IO events and webhooks to create automated and connected business processes.
Topic 2	<ul style="list-style-type: none">Cloud: This section of the exam measures the skills of Cloud Architects and covers the deployment and management of Adobe Commerce on cloud infrastructure. It requires explaining the fundamental cloud architecture, performing setup and configuration tasks, and utilizing the Adobe Commerce Cloud CLI tool to manage the environment effectively.

Topic 3	<ul style="list-style-type: none"> • Customizations: This section of the exam measures the skills of Solutions Engineers and involves modifying and extending platform functionality. This includes customizing core areas like the product catalog, checkout process, and admin panel, as well as manipulating data entities, customizing APIs, working with message queues, and writing integration tests to ensure code quality and functionality.
Topic 4	<ul style="list-style-type: none"> • Section 1: Architecture: This section of the exam measures the skills of Backend Developers and covers the core structural concepts of Adobe Commerce. It involves demonstrating effective cache implementation, understanding key code components like plugins and observers, and managing multi-site configurations on a single instance. The domain also includes explaining the use of Git patches, critical security features, the CRON scheduling system, and how indexing functions within the platform.

AD0-E725 Exam Sample Online - AD0-E725 Exam Forum

You may want to have a preliminary understanding of our AD0-E725 training materials before you buy them. Don't worry our AD0-E725 study questions will provide you with a free trial. Each user can learn what the AD0-E725 Exam Guide will look like when it opens from the free trial version we provide. Since that the free demos are a small part of our AD0-E725 practice braindumps and they are contained in three versions.

Adobe Commerce Developer Expert Sample Questions (Q48-Q53):

NEW QUESTION # 48

An Adobe Commerce Developer is implementing asynchronous communication with a third-party system using RabbitMQ. The XML files used must be able to configure a local queue and consume messages published by the third-party system. Which files should the Developer use?

- A. communication.xml, queue_topology.xml, and queue_publisher.xml
- B. communication.xml, queue_topology.xml, and queue_consumer.xml
- C. queue_topology.xml and queue_consumer.xml
- D. queue_topology.xml and queue_publisher.xml

Answer: C

Explanation:

To consume messages from a third-party system in RabbitMQ:

queue_topology.xml # defines queues and exchanges (topology).

queue_consumer.xml # defines consumers that listen to the queues.

A/D: communication.xml is used for defining topics for Adobe Commerce modules, not needed when consuming third-party messages directly.

C: queue_publisher.xml is used for publishing messages, not consuming them.

Reference:

Adobe Commerce DevDocs - Message queues

NEW QUESTION # 49

An Adobe Commerce Cloud Developer is tasked with investigating slow page loads and intermittent errors reported by a client after a recent deployment to their Pro Production environment.

Which action should the Developer use to quickly access and analyze the necessary data?

- A. Connect via SSH into each production node to review system and application logs independently for a more accurate representation of issues being logged.
- B. Go to New Relic Log Management to access aggregated log data, allowing the analysis of application, infrastructure, CDN, and WAF errors.
- C. Access Cloud Console to review environment messages and deployment logs that took place during the previous deployment to production.

Answer: B

Explanation:

In Adobe Commerce Cloud Pro Production, logs are spread across multiple nodes, so manually checking each node (A) is inefficient. The correct approach is to use New Relic Log Management, which aggregates logs from all services and nodes. This allows developers to quickly analyze application logs, infrastructure logs, CDN, and WAF errors in one place.

A is inefficient and not recommended.

C only shows deployment logs, not ongoing runtime errors.

B is correct: New Relic Log Management is the single source of truth for performance and error analysis.

Reference:

Adobe Commerce Cloud DevDocs - Log management with New Relic

NEW QUESTION # 50

An Adobe Commerce Developer creates a before plugin for the save() method from the Magento\Framework\App\Cache\Proxy class to manipulate cache identifiers and data before it is saved to the cache storage.

An example of the class code is shown below:

```
namespace Magento\Framework\App\Cache;
use Magento\Framework\App\Cache\CacheInterface;
use Magento\Framework\ObjectManager\NoninterceptableInterface;
class Proxy implements
CacheInterface,
NoninterceptableInterface
{
...
public function save($data, $identifier, $tags = [], $lifeTime = null)
{
return $this->getCache()->save($data, $identifier, $tags, $lifeTime);
}
...
}
```

Why is the plugin not working as expected?

- A. An around plugin defined for the same function prevents the execution.
- B. An after plugin defined for the same function affects the results.
- C. The plugin cannot be created for this class.

Answer: C

Explanation:

Comprehensive and Detailed Explanation (with official references):

The correct answer is A. The plugin cannot be created for this class.

The reason is that Magento\Framework\App\Cache\Proxy implements the NoninterceptableInterface.

* Any class that implements the NoninterceptableInterface in Magento is excluded from the plugin system

* This means no before, after, or around plugins can be applied to methods of such classes.

* Magento uses this mechanism to protect critical classes (like Proxy classes, Factories, and other infrastructure code) from being intercepted, as doing so could introduce performance or stability issues.

Therefore, the developer's plugin for the save() method does not work, because plugins are not allowed on this class by design.

Options B and C are incorrect because:

* Another plugin (after/around) does not block the execution in this case; the class itself is simply non- interceptable.

Official Documentation Extracts:

* "Plugins cannot be applied to final classes, final methods, non-public methods, or classes that implement Magento\Framework\ObjectManager\NoninterceptableInterface."- Adobe Commerce DevDocs: Plugins limitations

* "Classes implementing NoninterceptableInterface cannot be intercepted. This interface is used to mark classes that must not be extended through the plugin mechanism"- Magento Framework Reference:

NoninterceptableInterface

NEW QUESTION # 51

A client wants to calculate tax differently when an order is billed for a range of particular postcodes. They want to implement their

own system instead of using a third-party system. The Developer is asked to assist in this task by creating a conditional webhook. What must be done to achieve this?

- A. Implement a new webhook with a list of postcodes and link it to the original webhook, then advise the client to monitor for the new webhook instead.
- B. Create an after plugin on the webhook class and check for a list of postcodes at the time of processing and return true for certain postcodes.
- C. Create a webhooks.xml file and add the rules wanted in the form of a rule node element using the regex operator to catch a range of postcodes.

Answer: C

Explanation:

Webhooks in Adobe Commerce can be customized using webhooks.xml, where rules can be defined with conditions, including regex-based filtering. This allows the developer to configure postcodes that trigger specific webhook behavior.

A is not correct: modifying core webhook logic via plugin is not the recommended approach.

C is incorrect: duplicating webhooks is unnecessary when rules can be defined declaratively.

B is correct: webhooks.xml with rule conditions provides the proper solution.

Reference:

Adobe Commerce DevDocs - Webhooks configuration

NEW QUESTION # 52

A Developer is notified that custom API results are not cached, which is causing additional delays.

What are two potential causes for this behavior? (Choose two.)

- A. The request is using HTTP POST.
- B. The request is using HTTP PUT.
- C. The request is using HTTP GET.
- D. The request is using HTTP HEAD.

Answer: A,B

Explanation:

Adobe Commerce API caching (including GraphQL and REST) works only for idempotent requests such as HTTP GET.

C (POST) and D (PUT) are not cacheable because they are used for creating or updating resources.

A (GET) is cacheable.

B (HEAD) is technically idempotent, but not commonly used in Adobe Commerce APIs.
