SAP Certified Associate - SAP Business Data Cloud Sample Questions (Q21-Q26):

NEW QUESTION # 21

What are the primary purposes of SAP Business Data Cloud?

There are 2 correct answers to this question.

Response:

- A. To act solely as a data storage solution without analytics capabilities.
- B. To provide foundational services for data and analytics scenarios.
- C. To provide a homogeneous system landscape for data, functions, and use cases.
- D. To provide mainly manual data integration scenarios.

Answer: B,C

NEW QUESTION # 22

What is a key benefit of using SAP Business Data Cloud for data governance?

Please choose the correct answer.

Response:

- A. Automated data entry
- B. Real-time data visualization
- C. Reduced data storage costs
- D. Enhanced data security and compliance

Answer: D

NEW QUESTION # 23

What source system can you connect to with an SAP Analytics Cloud live connection that is provided by SAP BDC?

- A. SAP Datasphere
- B. SAP ERP
- C. SAP Business ByDesign Analytics
- D. SAP SuccessFactors

Answer: A

Explanation:

Within the context of SAP Business Data Cloud (BDC), the primary and most central source system for an SAP Analytics Cloud (SAC) live connection is SAP Datasphere. SAP Datasphere serves as the comprehensive data foundation for SAP's business data fabric, integrating data from various SAP and non-SAP sources, and providing a harmonized, semantically rich data layer. SAP BDC is built upon and extends the capabilities of SAP Datasphere, making it the strategic hub for analytics and data management. Therefore, to ensure data consistency, governance, and real-time access to the integrated and harmonized business data managed within the BDC ecosystem, SAP Datasphere is the recommended and primary live connection source for SAC. While SAC can connect to other SAP systems like S/4HANA or BW, within the specific architecture of SAP BDC, SAP Datasphere plays the pivotal role as the integrated data platform.

NEW QUESTION # 24

For a model in SAP Analytics Cloud you are using a live connection. Where is the data stored?

- A. Embedded dataset
- B. SAP Analytics Cloud model
- C. Source system
- D. Public dataset

Answer: C

Explanation:

When an SAP Analytics Cloud (SAC) model utilizes a live connection, the data is not stored within SAP Analytics Cloud itself. Instead, the data resides entirely in the source system. This means that SAC directly queries the data from the connected system (e.g., SAP HANA, SAP BW, SAP S/4HANA, or SAP Datasphere) in real-time every time a user interacts with the story or application. Only metadata, such as dimension definitions and measure aggregations, is stored in SAC. This approach offers several significant advantages: it ensures that users always work with the most current data, eliminates the need for data replication, and often addresses data privacy and security concerns by keeping sensitive data within the customer's secure landscape. The "live" nature means that any changes in the source system are immediately reflected in SAC.

NEW QUESTION # 25

What is the main storage type of the object store in SAP Business Data Cloud?

- A. SAP HANA extended tables
- B. SAP BW/4HANA InfoObjects
- C. SAP BW/4HANA DataStore objects (advanced)
- D. SAP HANA data lake files

Answer: D

Explanation:

The primary storage type for the object store within the SAP Business Data Cloud (BDC) architecture is SAP HANA data lake files. SAP BDC is designed to handle vast amounts of diverse data, including semi-structured and unstructured data, which is efficiently stored in a data lake. The SAP HANA data lake, specifically its file storage component, provides a highly scalable and cost-effective solution for retaining raw, historical, and detailed data. This contrasts with traditional relational databases (like SAP HANA extended tables) or data warehousing constructs (like BW/4HANA DataStore objects or InfoObjects), which are optimized for structured, aggregated data and specific query patterns. The object store's reliance on data lake files in BDC underscores its capability to manage enterprise-wide data regardless of its structure, making it suitable for a wide range of analytical workloads, including those involving machine learning and advanced analytics where raw data access is crucial.
