

New AAISM Test Bootcamp - Quiz 2026 AAISM: First-grade Test ISACA Advanced in AI Security Management (AAISM) Exam Questions Vce

BONUS!!! Download part of DumpsReview AAISM dumps for free: https://drive.google.com/open?id=1Shdgt632qeFGuphBpLvEJwkTA5Z_sXXc

As long as you study with our AAISM exam braindump, you can find that it is easy to study with the AAISM exam questions. Therefore, even ordinary examiners can master all the learning problems without difficulty. In addition, AAISM candidates can benefit themselves by using our test engine and get a lot of test questions like exercises and answers. They will help them modify the entire syllabus in a short time. The most important thing is that our AAISM Practice Guide can help you obtain the certification without difficulty.

DumpsReview alerts you that the syllabus of the ISACA Advanced in AI Security Management (AAISM) Exam (AAISM) certification exam changes from time to time. Therefore, keep checking the fresh updates released by the ISACA. It will save you from the unnecessary mental hassle of wasting your valuable money and time. DumpsReview announces another remarkable feature to its users by giving them the ISACA AAISM Dumps updates until 1 year after purchasing the ISACA AAISM certification exam pdf questions.

>> New AAISM Test Bootcamp <<

Overcome Fear of Exam with ISACA AAISM Exam Dumps

This is a simple and portable document of real ISACA AAISM Exam Questions. It contains actual ISACA AAISM exam questions and answers and can be helpful for quick revision or for studying on the go. It is also printable so you can easily study on a hard copy of the pdf having a break from staring.

ISACA Advanced in AI Security Management (AAISM) Exam Sample Questions (Q237-Q242):

NEW QUESTION # 237

A financial institution plans to deploy an AI system to provide credit risk assessments for loan applications.

Which of the following should be given the HIGHEST priority in the system's design to ensure ethical decision-making and prevent bias?

- A. Train the system to provide advisory outputs with final decisions made by human experts.
- B. Restrict the model's decision-making criteria to objective financial metrics only.
- C. Regularly update the model with new customer data to improve prediction accuracy.
- D. Integrate a mechanism for customers to appeal decisions directly within the system.

Answer: A

Explanation:

In AI governance frameworks, credit scoring is treated as a high-risk application. For such systems, the highest-priority safeguard is human oversight to ensure fairness, accountability, and prevention of bias in automated decisions.

The AI Security Management™ (AAISM) domain of AI Governance and Program Management emphasizes that high-impact AI systems require explicit governance structures and human accountability. Human-in-the-loop design ensures that final decisions remain the responsibility of human experts rather than being fully automated. This is particularly critical in financial contexts, where

biased outputs can affect individuals' access to credit and create compliance risks.

Official ISACA AI governance guidance specifies:

High-risk AI systems must comply with strict requirements, including human oversight, transparency, and fairness.

The purpose of human oversight is to reduce risks to fundamental rights by ensuring humans can intervene or override an automated decision.

Bias controls are strengthened by requiring human review processes that can analyze outputs and prevent unfair discrimination.

Why other options are not the highest priority:

A). Regular updates improve accuracy but do not guarantee fairness or ethical decision-making. Model drift can introduce new bias if not governed properly.

B). Appeals mechanisms are important for accountability, but they operate after harm has occurred.

Governance frameworks emphasize prevention through human oversight in the decision loop.

D). Restricting criteria to "objective metrics" is insufficient, as even objective data can contain hidden proxies for protected attributes.

Bias mitigation requires monitoring, testing, and human oversight, not only feature restriction.

AAISM Domain Alignment:

Domain 1 - AI Governance and Program Management: Ensures accountability, ethical oversight, and governance structures.

Domain 2 - AI Risk Management: Identifies and mitigates risks such as bias, discrimination, and lack of transparency.

Domain 3 - AI Technologies and Controls: Provides the technical enablers for implementing oversight mechanisms and bias detection tools.

AAISM Exam Content Outline - Domain 1: AI Governance and Program Management (roles, responsibilities, oversight).

ISACA AI Governance Guidance (human oversight as mandatory in high-risk AI applications).

Bias and Fairness Controls in AI (human review and intervention as a primary safeguard).

NEW QUESTION # 238

Which BEST describes the role of model cards in AI solutions?

- A. They visualize AI model performance
- B. They automatically fine-tune AI models
- **C. They document training data and AI model use cases**
- D. They help developers create synthetic data

Answer: C

Explanation:

AAISM explains that model cards provide structured documentation about AI models, including:

- * intended use cases
- * training data characteristics
- * ethical considerations
- * known limitations
- * risk factors
- * performance benchmarks

They are not visualization tools (A), do not create synthetic data (C), and do not tune models (D).

References: AAISM Study Guide - AI Transparency & Model Cards.

NEW QUESTION # 239

An organization is designing an AI-based credit risk assessment system that will integrate with sensitive financial datasets. Which of the following would BEST support the implementation of security-by-design principles in the AI system's architecture?

- A. Segmenting AI services across containers to manage resource constraints
- B. Restricting access to AI models using IP allow lists to reduce public exposure
- C. Integrating differential privacy mechanisms into model training to limit data leakage
- **D. Applying threat modeling specific to AI components before deployment**

Answer: D

Explanation:

Security by design in AI requires establishing risk-informed requirements at the earliest stages of the lifecycle and systematically translating them into architectural controls. Conducting AI-specific threat modeling before deployment is the highest-leverage action because it identifies assets (data, models, pipelines), trust boundaries (feature stores, training/inference services), threat events

(poisoning, evasion, model extraction), and attack paths unique to ML systems. The outputs (abuse/misuse cases, control objectives, verification plans) then drive selection and prioritization of controls such as privacy-enhancing techniques, access controls, isolation, monitoring, and assurance testing. While differential privacy (C) is a strong control for leakage risk, it is one control choice among many and should be selected as a result of threat modeling. IP allow lists (B) and container segmentation (A) are valuable hardening measures but are narrower and do not replace the lifecycle-wide governance and design traceability that threat modeling enables. NEW QUESTION # 240

An organization implementing an LLM application sees unexpected cost increases due to excessive computational resource usage. Which vulnerability is MOST likely in need of mitigation?

- A. Excessive agency
- B. Sensitive information disclosure
- C. **Unbounded consumption**
- D. System prompt leakage

Answer: C

Explanation:

AAISM categorizes unbounded consumption (also known as "resource exhaustion" or "infinite queries") as an AI-specific vulnerability where attackers (or faulty prompts) trigger excessive computation, leading to high costs and degraded service. This aligns precisely with unexpected large compute bills.

Excessive agency (A) refers to unsafe autonomy, while disclosure (B) and prompt leakage (D) do not relate to compute overuse. References: AAISM Study Guide - AI Abuse and Unbounded Consumption Risk.

NEW QUESTION # 241

A CISO must provide KPIs for the organization's newly deployed AI chatbot. Which metrics are BEST?

- A. Customer effort score and user retention
- B. Response time and throughput
- C. **Error rate and bias detection**
- D. Explainability and F1 score

Answer: C

Explanation:

AAISM recommends that AI KPIs should emphasize:

- * Error rates - measure correctness and reliability
- * Bias detection metrics - assess fairness and harm risk

These are the core governance KPIs for AI systems interacting with end users.

Response time (A) is a performance metric but not an AI governance KPI. Customer retention (C) is business- focused. F1 score (D) is useful but not as critical as bias monitoring.

NEW QUESTION # 242

.....

If you fail in the exam with our AAISM quiz prep we will refund you in full at one time immediately. If only you provide the proof which include the exam proof and the scanning copy or the screenshot of the failure marks we will refund you immediately. If any problems or doubts about our AAISM exam torrent exist, please contact our customer service personnel online or contact us by mails and we will reply you and solve your doubts immediately. The AAISM Quiz prep we sell boost high passing rate and hit rate so you needn't worry that you can't pass the exam too much. But if you fail in please don't worry we will refund you. Take it easy before you purchase our AAISM quiz torrent.
