

# ISTQB-CTFL Latest Braindumps Ebook - Exam Sample ISTQB-CTFL Questions

---

## ISTQB CTFL Certification Exam Sample Questions

01. Which of the following is a project risk?
- a) Skill and staff shortages
  - b) Poor software characteristics (e.g. usability)
  - c) Failure-prone software delivered
  - d) Possible reliability defect (bug) - answer:
- a) Skill and staff shortages
02. Which of these tasks would you expect to be performed during the Test Analysis and Design phase of the Fundamental Test Process?
- a) Defining test objectives
  - b) Reviewing the test basis
  - c) Creating test suites from test procedures
  - d) Analyzing lessons learned for process improvement - answerAnswer:
- b) Reviewing the test basis
03. As a test manager, you are asked for a test summary report. Concerning test activities, and according to the IEEE 829 Standard, what should be the MOST important information to include in your report?
- a) The number of test cases executed and their results.
  - b) An overview of the major testing activities, events and the status with respect to meeting goals
  - c) Overall evaluation of each development work item
  - d) Training taken by members of the test team to support the test effort - answerAnswer:
- b) An overview of the major testing activities, events and the status with respect to meeting goals
04. Which of the following statements BEST describes non-functional testing?
- a) Non-functional testing is the process of testing an integrated system to verify that it meets specified requirements.
  - b) Non-functional testing is the process of testing to determine system compliance with coding standards.

DOWNLOAD the newest DumpStillValid ISTQB-CTFL PDF dumps from Cloud Storage for free: [https://drive.google.com/open?id=1BeDKCJs6\\_IBKD9aciOcvrkDcvA9x1kcf6](https://drive.google.com/open?id=1BeDKCJs6_IBKD9aciOcvrkDcvA9x1kcf6)

Boring learning is out of style. Our ISTQB-CTFL study materials will stimulate your learning interests. Then you will concentrate on learning our ISTQB-CTFL practice guide for we have professional experts who have been in this career for over ten year apply the newest technologies to develop not only the content but also the displays. Nothing can divert your attention. If you are ready to change yourself, come to purchase our ISTQB-CTFL Exam Materials. Never give up your dreams.

With ISTQB-CTFL study tool, you no longer need to look at a drowsy textbook. You do not need to study day and night. With ISTQB-CTFL learning dumps, you only need to spend 20-30 hours on studying, and then you can easily pass the exam. At the same time, the language in ISTQB-CTFL test question is very simple and easy to understand. Even if you are a newcomer who has just entered the industry, you can learn all the knowledge points without any obstacles. We believe that ISTQB-CTFL Study Tool will make you fall in love with learning. Come and buy it now.

## 100% Pass Valid ISTQB - ISTQB-CTFL Latest Braindumps Ebook

The great reputation of our ISTQB-CTFL study materials has earned the title “the model study material for the test certification” for

us. Our assiduous pursuit for high quality of our products creates our top-ranking ISTQB-CTFL study materials and constantly increasing sales volume. Our company has forged a group of professional experts with the excelsior craftsmanship and a mature service system. The quality of our ISTQB-CTFL Study Materials is high because our experts team organizes and compiles them according to the real exam's needs and has extracted the essence of all of the information about the test.

## ISTQB Certified Tester Foundation Level (CTFL v4.0) Sample Questions (Q396-Q401):

### NEW QUESTION # 396

You are responsible for applying the correct technique for a review of the requirements document for a project to develop a new software application. You identify the reviewers and the required roles, including the meeting leader, who is the requirements document author, and a separate role for a scribe. Additionally, you decide to take a relatively informal approach to the requirements review. The goal of the review is to find defects in the requirements document, such as omissions, Inconsistencies, and duplications. Another goal of the review is to improve the software application's usability and accessibility by considering the various stakeholders' viewpoints.

Which of the following statements BEST describes this scenario?

- A. This scenario is using a walkthrough review type and a checklist-based review technique
- B. This scenario is using a pair review type and a perspective-based review technique
- C. This scenario is using a walkthrough review type and a perspective-based review technique
- D. This scenario is using a pair review type and a checklist-based review technique

**Answer: C**

Explanation:

This scenario is using a walkthrough review type and a perspective-based review technique. In a walkthrough, the author of the document leads the meeting and it typically includes a meeting leader and a scribe, as described. This type of review is informal, focuses on discussion, and often involves scenario-based reading of the document to understand different user perspectives (ISTQB Main Web).References:

### NEW QUESTION # 397

A system has a self-diagnostics module that starts executing after the system is reset. The diagnostics are running 12 different tests on the systems memory hardware. The following is one of the requirements set for the diagnostics module:

'The time taking the diagnostics tests to execute shall be less than 2 seconds' Which of the following is a failure related to the specified requirement?

- A. The diagnostic tests fail due to incorrect implementation of the test code
- B. The diagnostic tests take too much time to execute
- C. The diagnostic tests that measure the speed of the memory, fail
- D. The diagnostic tests fail to start after a system reset

**Answer: B**

Explanation:

A failure is an event in which a component or system does not perform a required function within specified limits<sup>1</sup>. A requirement is a condition or capability needed by a user to solve a problem or achieve an objective<sup>2</sup>. In this case, the requirement is that the diagnostics tests should execute in less than 2 seconds.

Therefore, any event that violates this requirement is a failure. The only option that clearly violates this requirement is B. The diagnostic tests take too much time to execute. If the diagnostic tests take more than 2 seconds to complete, then they do not meet the specified limit and thus fail. The other options are not necessarily failures related to the specified requirement. Option A. The diagnostic tests fail to start after a system reset is a failure, but not related to the time limit. It is related to the functionality of the self-diagnostics module. Option C. The diagnostic tests that measure the speed of the memory, fail is also a failure, but not related to the time limit. It is related to the accuracy of the memory tests. Option D. The diagnostic tests fail due to incorrect implementation of the test code is also a failure, but not related to the time limit. It is related to the quality of the test code. References = ISTQB® Certified Tester Foundation Level Syllabus v4.0, Requirements Engineering Fundamentals.

### NEW QUESTION # 398

The following requirement is given "Set X to be the sum of Y and Z".  
All the following four implementations have bugs.  
Which one of the following bugs can be caught by Static Analysis?

- A. `int x = 1.`  
`int y = 2.`  
`int y = 3.`  
`X = y+z;`
- B. `int x = 1.`  
`int y = 2.`  
`int z = 3.`  
`X = z-y`
- C. `int y = 2`  
`Int z = 3.`  
`Y = z+y`
- D. `int x = 1.`  
`Int y = 2.`  
`Int z = 3.`  
`Z = x +y`

**Answer: A**

Explanation:

Static analysis is a technique that analyzes the source code or other software artifacts without executing them. Static analysis can detect defects such as syntax errors, coding standards violations, potential security vulnerabilities, or logical flaws. Static analysis can catch the bug in the first implementation, as it contains two syntax errors: the variable `y` is declared twice, and the assignment statement `X = y+z` is invalid. Static analysis cannot catch the bugs in the other three implementations, as they are logical errors that do not violate any syntax rules, but produce incorrect results. Verified Reference: [A Study Guide to the ISTQB Foundation Level 2018 Syllabus - Springer], Chapter 3, page 25-26.

#### NEW QUESTION # 399

Which of the following statements is CORRECT?

- A. Test cases are made up of input values, expected results and actual results developed to cover test objectives
- B. Test cases are derived during the test design activity to cover test objectives or test conditions
- C. Test cases describe items or events to test that are derived from the test basis during the test analysis activity
- D. Test cases are sequences of actions for test execution specified during the test implementation activity

**Answer: D**

Explanation:

A test case is a set of input values, execution preconditions, expected results and execution postconditions, developed for a particular objective or test condition. A test case is a sequence of actions for test execution that can be followed by a tester or a test automation tool. A test case is specified during the test implementation activity, which is the activity that prepares the testware needed for test execution. A test case does not include actual results, as these are obtained during test execution and compared with the expected results. A test case does not describe items or events to test, as these are derived from the test basis during the test analysis activity. A test case is not derived during the test design activity, as this is the activity that specifies the test conditions or objectives that need to be tested. Verified Reference: [A Study Guide to the ISTQB Foundation Level 2018 Syllabus - Springer], Chapter 3, page 23-24; Chapter 4, page 34.

#### NEW QUESTION # 400

Your organization's test strategy states that it is desirable to use more than one method for estimating test effort. You are responsible for estimating test effort for the next project. Based on historical data, the development-to-test effort ratio is 5:3.

The initial estimate for the development effort is 450 person-days.

Which ONE of the following options corresponds to the estimated test effort using the ratio-based method?

- A. 270 person-days
- B. 750 person-days
- C. 720 person-days

- D. 180 person-days

**Answer: A**

Explanation:

Comprehensive and Detailed In-Depth Explanation:

The ratio-based estimation method relies on historical relationships between development and testing effort.

Using the given 5:3 ratio:

$$\text{Test Effort} = \left( \frac{3}{5} \times \text{Development Effort} \right) = \left( \frac{3}{5} \times 450 \right) = 270 \text{ person-days}$$

Thus, the correct answer is 270 person-days (D).

\* (A) and (C) are incorrect as they overestimate the effort.

\* (B) underestimates the testing effort based on the ratio.

Ratio-based estimation helps allocate resources effectively based on past project data.
