You will not find such affordable and latest material for Amazon certification exam anywhere else. Don't miss these incredible offers. Order real Amazon AWS-Developer Exam Questions today and start preparation for the certification exam.

Pattern of DVA-C01 Exam

The format of DVA-C01 is similar to other AWS exams. The questions appear in the form of multiple-choice and multiple response items, and the candidates are given 130 minutes to answer them. MCQs have only one correct option while the multiple response tasks have more than 1 right answer out of 5 or more options.

To register for the test, one needs to pay \$150 as a fee and this price might vary from country to country. The exam comes in different languages like English, Korean, Japanese, and Simplified Chinese. The curriculum of the test includes 5 topics such as deployment, security, refactoring, development with AWS services, and monitoring and troubleshooting.

The AWS-Certified-Developer-Associate certification exam covers a wide range of topics related to AWS services, including developing and maintaining applications written for Amazon Simple Storage Service (S3), Amazon DynamoDB, Amazon Simple Queue Service (SQS), and Amazon Simple Notification Service (SNS). AWS-Developer Exam also covers topics related to AWS Identity and Access Management (IAM), AWS Elastic Beanstalk, AWS CloudFormation, and AWS CloudWatch.

100% Pass Quiz Amazon - AWS-Developer - Useful Upgrade AWS Certified Developer Associate Exam (DVA-C02) Dumps

Our AWS-Developer exam dumps are compiled by our veteran professionals who have been doing research in this field for years. There is no question to doubt that no body can know better than them. The content and displays of the AWS-Developer pass guide Which they have tailor-designed are absolutely more superior than the other providers'. Besides, they update our AWS-Developer Real Exam every day to make sure that our customer can receive the latest AWS-Developer preparation brain dumps.

To become an AWS Certified Developer - Associate, candidates must pass the AWS Certified Developer - Associate certification exam. AWS-Developer Exam consists of 65 multiple-choice questions that must be completed within 130 minutes. The passing

score for the exam is 720 out of 1000. Upon passing the exam, candidates will receive a certification that is valid for two years. AWS Certified Developer Associate Exam (DVA-C02) certification can be renewed by passing the current version of the exam or by earning a higher-level AWS certification.

Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q289-Q294):

NEW QUESTION # 289

An application stores payroll information nightly in DynamoDB for a large number of employees across hundreds of offices. Item attributes consist of individual name, office identifier, and cumulative daily hours. Managers run reports for ranges of names working in their office. One query is, "Return all Items in this office for names starting with A through E". Which table configuration will result in the lowest impact on provisioned throughput for this query?

- A. Configure the table to have a hash index on the name attribute, and a range index on the office identifier
- **B. Configure the table to have a range index on the name attribute, and a hash index on the office identifier**
- C. Configure a hash index on the office Identifier attribute and no range index
- D. Configure a hash index on the name attribute and no range index

Answer: B

NEW QUESTION # 290

You run an ad-supported photo sharing website using S3 to serve photos to visitors of your site. At some point you find out that other sites have been linking to the photos on your site, causing loss to your business. What is an effective method to mitigate this?

- A. Block the IPs of the offending websites in Security Groups.
- **B. Remove public read access and use signed URLs with expiry dates.**
- C. Use CloudFront distributions for static content.
- D. Store photos on an EBS volume of the web server

Answer: B

NEW QUESTION # 291

A company is migrating the content delivery network for its dynamic PHP website to AWS. An Amazon CloudFront web distribution is part of the new infrastructure. The distribution has the following cache behavior settings:

- * Allowed HTTP Methods is set to GET HEAD
- * Viewer Protocol Policy is set to HTTP and HTTPS

Developers test the solution and can reach the company's website over HTTP and HTTPS. However, the developers are unable to log in to the previously working administration panel of the website. Which action will resolve this login issue?

- A. Set Viewer Protocol Policy to HTTPS Only
- **B. Set Viewer Protocol Policy to Redirect HTTP to HTTPS.**
- C. Set Allowed HTTP Methods to GET HEAD, OPTIONS, PUT, POST, PATCH, DELETE
- D. Set Allowed HTTP Methods to GET, HEAD, OPTIONS

Answer: B

NEW QUESTION # 292

A developer has an application that stores data in an Amazon S3 bucket. The application uses an HTTP API to store and retrieve objects. When the PutObject API operation adds objects to the S3 bucket, the developer must encrypt these objects at rest by using server-side encryption with Amazon S3 managed keys (SSE-S3).

Which solution will meet this requirement?

- **A. Set the x-amz-server-side-encryption header when invoking the PutObject API operation.**
- B. Create an AWS Key Management Service (AWS KMS) key. Assign the KMS key to the S3 bucket.
- C. Apply TLS to encrypt the traffic to the S3 bucket.
- D. Provide the encryption key in the HTTP header of every request.

Answer: A

NEW QUESTION # 293

A company needs to deploy all its cloud resources by using AWS CloudFormation templates. A developer must create an Amazon Simple Notification Service (Amazon SNS) automatic notification to help enforce this rule. The developer creates an SNS topic and subscribes the email address of the company's security team to the SNS topic.

The security team must receive a notification immediately if an IAM role is created without the use of CloudFormation.

Which solution will meet this requirement?

- A. Launch an Amazon EC2 instance that includes a script to filter events from CloudTrail if a role was created without CloudFormation. Configure the script to publish to the SNS topic. Create a cron job to run the script on the EC2 instance every 15 minutes.
- B. Create an AWS Lambda function to filter events from CloudTrail if a role was created without CloudFormation. Configure the Lambda function to publish to the SNS topic. Create an Amazon EventBridge schedule to invoke the Lambda function every 15 minutes.
- **C. Create an Amazon EventBridge rule to filter events from CloudTrail if a role was created without CloudFormation. Specify the SNS topic as the target of the EventBridge rule.**
- D. Create an AWS Fargate task in Amazon Elastic Container Service (Amazon ECS) to filter events from CloudTrail if a role was created without CloudFormation. Configure the Fargate task to publish to the SNS topic. Create an Amazon EventBridge schedule to run the Fargate task every 15 minutes.

Answer: C

Explanation:

* EventBridge (formerly CloudWatch Events) is the ideal service for real-time event monitoring.

* CloudTrail logs IAM role creation.

* EventBridge rules can filter CloudTrail events and trigger SNS notifications instantly.
