Salesforce Certified Sharing and Visibility Architect certification validates the skills and knowledge required to become a Salesforce Certified Sharing and Visibility Architect.

Salesforce Certified Sharing and Visibility Architect Sample Questions (Q58-Q63):

NEW QUESTION # 58

Universal Containers (UC) has a custom Apex class that enforces a business process and updates opportunity field-level security permissions of read only certain user's profiles are being updated by their class.

How should the architect fix this problem?

- A. Use the With SECURITYT_ENFORCED keyword in the SOQL statement.
- B. Add With Sharing keyword to the class.
- C. Put the code in an class that uses the With Sharing keyword.
- D. Use the IsUpdateable() Apex method to test each field prior to allowing updates.

Answer: A

NEW QUESTION # 59

Which two capabilities does the delegated administrator permission provide?

Choose 2 answers

- A. Set OWD
- B. Unlock users
- C. Assign users profiles
- D. Create profiles

Answer: B,C

NEW QUESTION # 60

Universal Containers has just deployed a change to its role hierarchy. A manager is reporting that their staff can now see Accounts that they do not own and should not have access to. How should the Architect troubleshoot?

- A. While logged in as the one of the Staff members, navigate to their user record and inspect their profile and role membership.
- B. While logged in as the System Administrator, use the Field Accessibility Viewer to view a matrix of who has access to Accounts.
- C. While logged in as the one of the Staff members, navigate to a sample account and use the Sharing button to determine who has access.
- D. While logged in as the System Administrator, use the Field Accessibility Viewer to view a matrix of who has access to Accounts.

Answer: C

NEW QUESTION # 61

How should the Architect ensure that OBJECT-LEVEL SECURITY is enforced within a custom Visualforce application that was a standard Apex controller on the Lead object?

- A. Use the "With Sharing" keyword when defining the Visualforce page.
- B. Use the Schema.DescribeSObjectResult.isAccessible() method in the Apex controller.
- C. Use the runAs() method to enforce user permissions in the Apex controller.
- **D. Use the `{!$ObjectType.lead.accessible}` expression within the Visualforce page.**

Answer: D

Explanation:

Explanation

Using the `{!$ObjectType.lead.accessible}` expression within the Visualforce page is the best way to ensure that object-level security is enforced within a custom Visualforce application that uses a standard Apex controller on the Lead object. This expression evaluates to true if the user has read access to the Lead object, and false otherwise. The Visualforce page can use this expression to conditionally render components based on the user's permissions. Option A is incorrect, as the runAs() method is only available in test methods and does not change the user's permissions. Option B is incorrect, as the Schema.DescribeSObjectResult.isAccessible() method returns true if the user has any access (read, create, edit, or delete) to the object, not just read access. Option D is incorrect, as using the "With Sharing" keyword when defining the Visualforce page does not affect object-level security, but record-level security.

NEW QUESTION # 62

Sales reps at Universal Containers (UC) complain about the manual activities they need to perform in order to grant access to supporting internal users (legal, engineering, finance, etc.) for customer records when they need help. In general, the sales reps involved in the deals will not change.

How should an architect help UC improve sales reps' productivity?

- **A. Leverage default Account team**
- B. Create a permission set with View All Data and assign to supporting users.
- C. Create a criteria based sharing rule to grant access to other users.

Answer: A

Explanation:

Default Account Teams allow users to predefine a set of supporting internal users (e.g., legal, engineering, finance) who need access to customer records. The team members are automatically granted the specified access whenever an Account is created or updated, reducing the manual effort required by sales reps.

* Option A: A criteria-based sharing rule might grant access to a larger group but does not provide the flexibility and precision of Account Teams.

* Option C: Assigning View All Data via a permission set gives overly broad access and violates the principle of least privilege.
