## 200-901 best Cisco certification exam questions and answers free download

We declare that we can ensure you 100% pass, because we have the real exam questions for the 200-901 actual test. All the questions of Cisco 200-901 test pdf are taken from current pool of actual test, then after refined and checked, compiled into the complete dumps. Furthermore, the answers are correct and verified by our IT experts with decades of hands-on experience. So the high quality and accuracy of 200-901 Cert Guide are without any doubt. With our 100 % pass rate history & money back guarantee, you can rest assured to choose our 200-901 vce files.

### Cisco DevNet Associate Exam Sample Questions (Q392-Q397):

#### NEW QUESTION # 392

An engineer must configure Cisco Nexus devices and wants to automate this workflow. The engineer enables the Cisco NX-OS REST API to configure the devices by using an Ansible playbook. Before running the code, which resource must be used to verify that the code works correctly?

- A. Cisco Code Exchange
- B. Cisco Learning Labs
- C. Cisco Modeling Labs
- D. Cisco NX-OS SDK

**Answer: C**

Explanation:

Cisco Modeling Labs is an on-premise network simulation tool that runs on workstations and servers. With Cisco Modeling Labs, you can quickly and easily simulate Cisco and non-Cisco networks, using real Cisco images.

#### NEW QUESTION # 393

Which network device monitors incoming and outgoing traffic and decides whether to allow or block specific traffic based on a defined set of rules?

- A. reverse proxy
- B. switch
- C. load balancer
- D. firewall

**Answer: D**

Explanation:

A firewall is a network device that monitors incoming and outgoing traffic and decides whether to allow or block specific traffic based on a defined set of rules.

\* Function of a Firewall:

\* Traffic Monitoring: It continuously monitors all traffic passing through it.

\* Rule-Based Filtering: It applies predefined security rules to allow or deny traffic.

\* Protection: It protects networks from unauthorized access and cyber threats.

\* Comparison with Other Devices:

\* Switch: A network device that connects devices within a LAN and uses MAC addresses to forward data to the correct destination.

\* Load Balancer: Distributes network or application traffic across multiple servers to ensure no single server becomes overwhelmed.

\* Reverse Proxy: A server that sits in front of web servers and forwards client requests to those web servers.

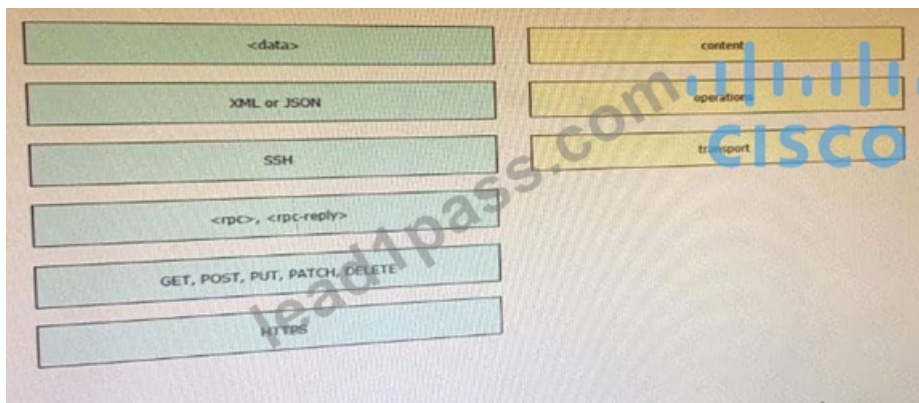

Therefore, a firewall is the correct answer because it specifically monitors and filters network traffic based on security rules.

#### NEW QUESTION # 394

Drag and drop elements of the RESTCONF protocol stack from the left onto the correct description on the right. Not all elements on the left are used.

**Answer:**

**Explanation:**

**Explanation**

1 - B, 2 - E, 3 - F

### NEW QUESTION # 395

Which REST architectural constraint indicates that no client context should be stored on the server between requests?

- A. client-server
- B. uniform interface
- C. stateless
- D. cacheable

**Answer: C**

**Explanation:**

In REST architecture, the stateless constraint indicates that no client context should be stored on the server between requests. Each request from the client to the server must contain all the information needed to understand and process the request.

Stateless: Ensures that each request is independent and contains all necessary information.

Uniform interface: Defines a standard way of interacting with resources.

Cacheable: Responses must define whether they are cacheable to improve performance.

Client-server: Separates the client and server roles.

### NEW QUESTION # 396

Refer to the exhibit. A developer is part of a team that is working on an open-source project in which source code is hosted in a public GitHub repository. While the application was built, security concerns were addressed by encrypting the credentials on the server. After a few months, the developer realized that a hacker managed to gain access to the account. The exhibit contains part of the source code for the login process. Why was the attacker able to access the developer's account?

- A. The encoded credentials were available in the source code.
- B. An SSL certificate was used instead of the TLS protocol to authenticate.
- C. The credentials were encrypted in the source code.
- D. The application was not encrypting the communication with the server.

**NEW QUESTION # 397**

If you purchase our 200-901 test torrent this issue is impossible. We hire experienced staff to handle this issue perfectly. We are sure that our products and payment process are surely safe and anti-virus. If you have any question about downloading and using our 200-901 Study Tool, we have professional staff to remotely handle for you immediately, let users to use the DevNet Associate Exam guide torrent in a safe environment, bring more comfortable experience for the user.
