## EMEA-Advanced-Support Cheap Dumps - EMEA-Advanced-Support Reliable Exam Vce

The pass rate for EMEA-Advanced-Support training materials is 98.95%, and you can pass and get the certificate successfully if you buy EMEA-Advanced-Support training materials from us. Besides, we have experienced experts to compile and verify EMEA-Advanced-Support training materials, therefore quality and accuracy can be guaranteed. We are pass guarantee and money back guarantee if you buy EMEA-Advanced-Support Exam Dumps from us. We provide you with free update for one year for the EMEA-Advanced-Support training materials, so that you can know the latest information about the exam.

## Fortinet EMEA Advanced Support Exam Sample Questions (Q10-Q15):

### NEW QUESTION # 10

How does a stateful firewall control a TCP session?

- A. TCP source ports are used to control the session
- B. TCP destination ports are used to control the session
- C. TCP sequence numbers and TCP flags are used to control the session
- D. TCP ack numbers are used to control the session

**Answer: C**

Explanation:

A stateful firewall, like FortiGate, tracks TCP sessions by maintaining a state table that includes TCP sequence numbers and flags (e.g., SYN, ACK, FIN) to monitor the connection's lifecycle (establishment, data transfer, termination). This ensures proper session handling, detecting out-of-order packets or invalid states.

Source and destination ports identify the session but don't control its state, and ACK numbers alone are insufficient. Exact extract: "Stateful inspection tracks TCP sessions using sequence numbers and TCP flags (SYN, ACK, FIN, etc.) to ensure packets are valid and part of an established session... FortiGate maintains a state table to monitor the TCP connection states."

#### NEW QUESTION # 11

In FortiGate, what is the purpose of a Virtual IP (VIP)?

- A. To map an external IP to an internal IP for NAT
- B. To enable load balancing for VPN tunnels
- C. To create a virtual interface for VLANs
- D. To assign a secondary IP to a physical interface

**Answer: A**

Explanation:

A Virtual IP (VIP) in FortiGate maps an external IP address to an internal IP for Destination NAT (DNAT), commonly used for accessing internal servers from external networks. It is not for VLANs (B), secondary IPs (C), or VPN load balancing (D). Exact extract: "Virtual IPs (VIPs) are used for Destination NAT, mapping an external IP address to an internal IP to allow external access to internal resources, such as servers."

#### NEW QUESTION # 12

Which of the following are request methods in HTTP?

- A. LIST
- B. GET
- C. RETR
- D. HEAD

**Answer: B,D**

Explanation:

HTTP defines standard request methods, including GET (retrieve a resource) and HEAD (retrieve headers only). LIST and RETR are not standard HTTP methods; RETR is used in FTP, and LIST is not a recognized method in either protocol. The original document incorrectly lists only A, omitting C. Exact extract: "HTTP supports several request methods, including GET, HEAD, POST, PUT, DELETE, etc... GET retrieves a resource, while HEAD retrieves only the headers without the body content."

#### NEW QUESTION # 13

In Active FTP who sends the PORT command?

- A. The FTP Client
- B. The FTP Server
- C. There is no PORT command in Active FTP
- D. Both

**Answer: A**

Explanation:

In Active FTP, the client sends the PORT command to the server, specifying an ephemeral port for the server to initiate the data connection back to the client. This distinguishes Active FTP from Passive FTP, where the server provides the port. The server does not send PORT, and the command is a key part of Active FTP. Exact extract: "In Active FTP, the client sends a PORT command to the server, specifying the IP address and port number for the data connection... The server then initiates the data connection to the client's specified port."

#### NEW QUESTION # 14

In Active FTP who sends the PORT command?

- A. The FTP Client
- B. The FTP Server
- C. There is no PORT command in Active FTP
- D. Both

**Answer: A**

Explanation:

In Active FTP, the client sends the PORT command to the server, specifying an ephemeral port for the server to initiate the data connection back to the client. This distinguishes Active FTP from Passive FTP, where the server provides the port. The server does not send PORT, and the command is a key part of Active FTP. Exact extract: "In Active FTP, the client sends a PORT command to the server, specifying the IP address and port number for the data connection... The server then initiates the data connection to the client's specified port."

## NEW QUESTION # 15

.....

Our brand has marched into the international market and many overseas clients purchase our EMEA-Advanced-Support study materials online. As the saying goes, Rome is not build in a day. The achievements we get hinge on the constant improvement on the quality of our EMEA-Advanced-Support study materials and the belief we hold that we should provide the best service for the clients. The great efforts we devote to the EMEA-Advanced-Support Study Materials and the experiences we accumulate for decades are incalculable. All of these lead to our success of EMEA-Advanced-Support study materials and high prestige.
