Nutanix Certified Associate v6.10 Sample Questions (Q63-Q68):

NEW QUESTION # 63

What role does a Replication Factor of 2 or 3 play in ensuring data integrity and recovery?

- A. It reduces the need for offsite backup solutions.
- B. It limits the scope of hardware failures during recovery operations.

- C. It ensures that multiple copies of data are available for recovery.
- D. It accelerates data transfer to remote backup sites.

Answer: C

Explanation:

Replication Factor (RF) defines the number of copies of data stored in a Nutanix cluster. RF2 ensures two copies of data, and RF3 ensures three copies. This redundancy allows the system to maintain data integrity and recoverability even in the event of hardware failures.

- * A. It limits the scope of hardware failures during recovery operations: Incorrect, as RF focuses on data replication, not limiting failure scopes.
- * B. It ensures that multiple copies of data are available for recovery: Correct, as RF directly relates to data redundancy and recovery capabilities.
- * C. It accelerates data transfer to remote backup sites: Incorrect, as RF does not affect remote backup speed.
- * D. It reduces the need for offsite backup solutions: Incorrect, as RF works within the cluster, not as a replacement for offsite backups.
