

# HPE6-A78 Minimum Pass Score - Guide HPE6-A78 Torrent

P.S. Free 2025 HP HPE6-A78 dumps are available on Google Drive shared by Pass4SureQuiz: <https://drive.google.com/open?id=11SiCOnlSqEu-cud7zzluRXG3US5Yb38Q>

Everyone has the right to pursue happiness and wealth. You can rely on the HPE6-A78 certificate to support yourself. If you do not own one or two kinds of skills, it is difficult for you to make ends meet in the modern society. After all, you can rely on no one but yourself. At present, our HPE6-A78 Study Materials can give you a ray of hope. Even you have no basic knowledge about the HPE6-A78 study materials. You still can pass the HPE6-A78 with the help of our HPE6-A78 learning guide.

Our HPE6-A78 exam braindumps are famous for instant download, and you can receive downloading link and password within ten minutes after buying. Therefore you can start your learning as soon as possible. What's more, HPE6-A78 exam braindumps offer you free demo to have a try before buying. And we have online and offline chat service stuff who possess the professional knowledge for HPE6-A78 Exam Dumps, if you have any questions, just contact us, we will give you reply as soon as possible.

## Guide HPE6-A78 Torrent - HPE6-A78 Valid Test Vce

Experts at Pass4SureQuiz strive to provide applicants with valid and updated HP HPE6-A78 exam questions to prepare from, as well as increased learning experiences. We are confident in the quality of the HP HPE6-A78 preparational material we provide and back it up with a money-back guarantee. Pass4SureQuiz provides HP HPE6-A78 desktop-based practice software for you to test your knowledge and abilities. The HPE6-A78 desktop-based practice software has an easy-to-use interface.

## HP Aruba Certified Network Security Associate Exam Sample Questions (Q16-Q21):

### NEW QUESTION # 16

What is an example of phishing?

- A. An attacker checks a user's password by using trying millions of potential passwords.
- B. An attacker sends TCP messages to many different ports to discover which ports are open.
- **C. An attacker sends emails posing as a service team member to get users to disclose their passwords.**
- D. An attacker lures clients to connect to a software-based AP that is using a legitimate SSID.

**Answer: C**

Explanation:

Phishing is a type of social engineering attack where an attacker impersonates a trusted entity to deceive people into providing sensitive information, such as passwords or credit card numbers. An example of phishing is when an attacker sends emails posing as a service team member or a legitimate organization with the intention of getting users to disclose their passwords or other confidential information. These emails often contain links to fake websites that look remarkably similar to legitimate ones, tricking users into entering their details. References:

Cybersecurity guidelines on identifying and preventing phishing attacks.

### NEW QUESTION # 17

A company has Aruba Mobility Controllers (MCs), Aruba campus APs, and ArubaOS-Switches. The company plans to use ClearPass Policy Manager (CPPM) to classify endpoints by type. This company is using only CPPM and no other ClearPass solutions.

The ClearPass admins tell you that they want to use HTTP User-Agent strings to help classify endpoints.

What should you do as a part of configuring the ArubaOS-Switches to support this requirement?

- **A. Configure CPPM as the sFlow collector, and make sure that sFlow is enabled on edge ports.**
- B. Create a device fingerprinting policy that includes HTTP, and apply the policy to edge ports.
- C. Create remote mirrors that collect traffic on edge ports, and mirror it to CPPM's IP address.
- D. Connect the switches to CPPM's span ports, and set up mirroring of HTTP traffic on the switches.

**Answer: A**

Explanation:

ArubaOS-Switches can use sFlow technology to sample network traffic and send the samples to a collector, such as ClearPass Policy Manager (CPPM), for analysis. sFlow can be configured to capture various types of traffic, including HTTP, which typically contains User-Agent strings that can be used for device fingerprinting and classification.

To support the requirement for using HTTP User-Agent strings to classify endpoints, the switches would need to be configured to send sFlow samples containing HTTP traffic to CPPM. CPPM would then analyze these samples and use the User-Agent strings to classify the devices.

Therefore, the correct action to configure ArubaOS-Switches would involve:

Configuring CPPM as the sFlow collector on the switches.

Enabling sFlow on the edge ports that connect to endpoints.

This approach allows the network traffic to be analyzed by CPPM without requiring any additional mirroring or redirection of traffic, which would be resource-intensive and potentially disruptive to network performance.

### NEW QUESTION # 18

From which solution can ClearPass Policy Manager (CPPM) receive detailed information about client device type OS and status?

- A. ClearPass Onboard
- B. ClearPass Guest
- C. ClearPass Access Tracker
- **D. ClearPass OnGuard**

**Answer: D**

Explanation:

ClearPass Policy Manager (CPPM) can receive detailed information about client device type, OS, and status from ClearPass OnGuard. ClearPass OnGuard is part of the ClearPass suite and provides posture assessment and endpoint health checks. It gathers detailed information on the status and security posture of devices trying to connect to the network, such as whether antivirus software is up to date, which operating system is running, and other details that characterize the device's compliance with the network's security policies.

:

Aruba ClearPass product documentation that details the capabilities of ClearPass OnGuard.

Network security resources that describe endpoint health checks and the importance of device posture assessment for access control.

### NEW QUESTION # 19

What is a use case for implementing RadSec instead of RADIUS?

- A. A organization wants to strengthen the encryption used to protect RADIUS communications without increasing complexity.
- **B. A school district wants to protect messages sent between RADIUS clients and servers over an untrusted network.**
- C. A university wants to protect communications between the students' devices and the network access server.
- D. A corporation wants to implement EAP-TLS to authenticate wireless users at their main office.

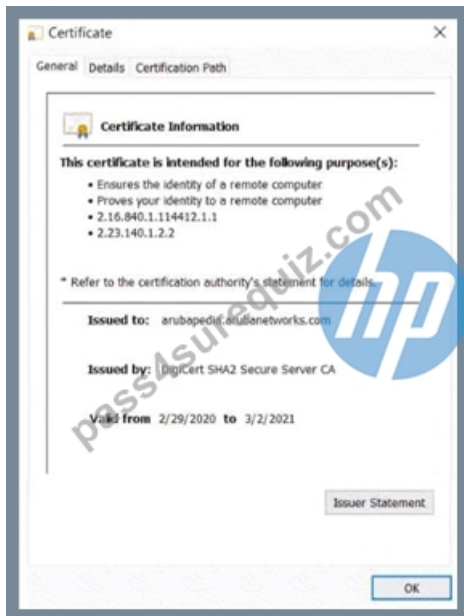

**Answer: B**

Explanation:

RadSec (RADIUS over TLS) is a protocol for transporting RADIUS messages over TLS-encrypted TCP/IP networks. The primary use case for implementing RadSec instead of traditional RADIUS is to protect RADIUS communications, particularly when those messages must travel across an untrusted network, such as the internet. RadSec provides confidentiality, integrity, and authentication for RADIUS traffic between clients and servers which may not be within a single secure network. In the case of a school district that wants to ensure the security of messages sent between RADIUS clients and servers over potentially insecure networks, RadSec would be the appropriate choice.

### NEW QUESTION # 20

Refer to the exhibit.

Device A is establishing an HTTPS session with the Arubapedig web site using Chrome. The Arubapedig web server sends the certificate shown in the exhibit. What does the browser do as part of validating the web server certificate?

- A. It uses the private key in the DigiCert SHA2 Secure Server CA to check the certificate's signature.
- **B. It uses the public key in the DigiCert SHA2 Secure Server CA certificate to check the certificate's signature.**
- C. It uses the public key in the DigiCert root CA certificate to check the certificate's signature.
- D. It uses the private key in the Arubapedig web site's certificate to check that certificate's signature.

**Answer: B**

Explanation:

When a browser, like Chrome, is validating a web server's certificate, it uses the public key in the certificate's signing authority to verify the certificate's digital signature. In the case of the exhibit, the browser would use the public key in the DigiCert SHA2 Secure Server CA certificate to check the signature of the Arubapedia web server's certificate. This process ensures that the certificate was indeed issued by the claimed Certificate Authority (CA) and has not been tampered with.

References:

Browser security documentation and SSL/TLS standards that explain the certificate validation process.

Cybersecurity educational resources that cover the principles of public key infrastructure (PKI) and certificate validation.

## NEW QUESTION # 21

.....

We consider the actual situation of the test-takers and provide them with high-quality learning materials at a reasonable price. Choose the HPE6-A78 test guide absolutely excellent quality and reasonable price, because the more times the user buys the HPE6-A78 test guide, the more discounts he gets. In order to make the user's whole experience smoother, we also provide a thoughtful package of services. Once users have any problems related to the HPE6-A78 learning questions, our staff will help solve them as soon as possible.
