

BUS105 practice materials & BUS105 guide torrent: Managerial Accounting (SAYA-0009) Exam & BUS105 study guide

BUS105 Statistics Timed Online Assignment – January Semester 2021

a)
The mean, median, and mode are the three measures of location. The mean of a set of observations is divided by the number of observations. The median value is usually referred to as the middle of the dataset. If the number of data is odd, then the median is the middle value after the values have been arranged in ascending or descending order of magnitude. There are two middle terms in the case of an even number of observations, and the median is obtained by taking the arithmetic mean of two middle terms. Mode is the variable's value that is predominant in the series with the most frequent value in a set of values.

Three measures of dispersion are range, interquartile range (IRQ) and standard deviation. The range is the difference between two extreme observations of the distribution. **IRQ measure the spread of the middle half of the data, and it is useful to measure variability, as it does not get affected by outliers.** A standard deviation (σ) is a measure of how dispersed the data is in relation to the mean (National Library of Medicine, 2006). SD is suitable to measure dispersion when there are no extreme values in the data. In data without outliers, SD will be more accurate as it considers all the values in the data.

National Library of Medicine. (2006, September 12). *Standard Deviation*. *www.nlm.nih.gov*.

https://www.nlm.nih.gov/michse/stats_tutorial/section2/mod8_sd.html

	2019 July	2020 July
Median	50	68
Mean	54.49	54.96
Mode	80	65
Range	75	78
Mean deviation	18.01	16.33
Standard deviation	21.13	20.02

b) We can find the correlation between two classes by finding Karl Pearson's coefficient of correlation between two classes. We can test the equality of mean of two classes by using independent t-test. We can test the equality of variances of two series by using F-test.

The steps to be followed to conduct the project are

1) We should define the objective of survey. Here, the objective of the survey is to examine whether there is a difference in academic performance between students who did face-to-face lessons and those who did online lessons.

2. We should define the population to be sampled. Here, SASS students who studied Statistics through face-to-face mode during the 2019 July semester and students who studied Statistics through the online mode during the 2020 July semester are considered as population.
