Valid Identity-and-Access-Management-Architect Exam Vce & Valid Identity-and-Access-Management-Architect Exam Duration

If you would like to use all kinds of electronic devices to prepare for the Identity-and-Access-Management-Architect exam, then I am glad to tell you that our online app version is definitely your perfect choice. With the online app version of our study materials, you can just feel free to practice the questions in our Identity-and-Access-Management-Architect Training Materials no matter you are using your mobile phone, personal computer, or tablet PC. In addition, another strong point of the online app version of our Identity-and-Access-Management-Architect learning guide is that it is convenient for you to use even though you are in offline environment.

Salesforce Certified Identity and Access Management Architect exam is a challenging certification that requires a comprehensive understanding of the Salesforce platform and its security features. Identity-and-Access-Management-Architect Exam is designed to test not only the candidate's technical knowledge but also their ability to design and implement effective solutions that meet their clients' needs. Those who pass the exam will earn the title of Salesforce Certified Identity and Access Management Architect, which is recognized throughout the industry as a mark of expertise and professionalism.

Salesforce Certified Identity and Access Management Architect Sample Questions (Q116-Q121):

NEW QUESTION # 116

A company wants to provide its employees with a custom mobile app that accesses Salesforce. Users are required to download the internal native iOS mobile app from corporate intranet on their mobile device. The app allows flexibility to access other non-Salesforce internal applications once users authenticate with Salesforce. The apps self-authorize, and users are permitted to use the apps once they have logged into Salesforce.

How should an identity architect meet the above requirements with the privately distributed mobile app?

- A. Create a new hybrid mobile app and use the connected app with OAuth to authenticate users for Salesforce and non-Salesforce internal apps.
- B. Use connected app with OAuth and Security Assertion Markup Language (SAML) to access other non-Salesforce internal apps.
- C. Use Salesforce as an identity provider (IdP) to access the mobile app and use the external IdP for other non-Salesforce internal apps.
- **D. Configure Mobile App settings in connected app and Salesforce as identity provider for non-Salesforce internal apps.**

Answer: D

Explanation:

Configuring Mobile App settings in connected app and Salesforce as identity provider for non-Salesforce internal apps is the best way to meet the requirements with the privately distributed mobile app. The Mobile App settings allow users to download the app from a private URL and use it with Salesforce credentials. The identity provider settings allow users to access other internal apps with SSO using Salesforce as the IdP. The other options are either not feasible or not optimal for this use case. References: Mobile App Settings, Single Sign-On for Desktop and Mobile Applications using SAML and OAuth

NEW QUESTION # 117

An Identity and Access Management (IAM) Architect is recommending Identity Connect to integrate Microsoft Active Directory (AD) with Salesforce for user provisioning, deprovisioning and single sign-on (SSO).

Which feature of Identity Connect is applicable for this scenario?

- A. Identity Connect can be deployed as a managed package on Salesforce org, leveraging High Availability of Salesforce Platform out-of-the-box.
- **B. When Identity Connect is in place, if a user is deprovisioned in an on-premise AD, the user's Salesforce session is revoked immediately.**
- C. When configured, Identity Connect acts as an identity provider to both Active Directory and Salesforce, thus providing SSO as a default feature.
- D. If the number of provisioned users exceeds Salesforce license allowances, Identity Connect will start disabling the existing Salesforce users in First-in, First-out (FIFO) fashion.

Answer: B

NEW QUESTION # 118

Universal Containers is building a web application that will connect with the Salesforce API using JWT OAuth Flow.

Which two settings need to be configured in the connect app to support this requirement?

Choose 2 answers

- A. The Use Digital Signature option in the connected app.
- B. The "edair_api" OAuth scope in the connected app.
- C. The "web" OAuth scope in the connected app.
- D. The "api" OAuth scope in the connected app.

Answer: A,D

Explanation:

JWT OAuth Flow is a protocol that allows a client app to obtain an access token from Salesforce by using a JSON Web Token (JWT) instead of an authorization code. The JWT contains information about the client app and the user who wants to access Salesforce. To use this flow, the client app needs to have a connected app configured in Salesforce. The connected app is a framework that enables an external application to integrate with Salesforce using APIs and standard protocols. To support JWT OAuth Flow, two settings need to be configured in the connected app:

* The Use Digital Signature option, which enables the connected app to verify the signature of the JWT using a certificate.

* The "api" OAuth scope, which allows the connected app to access Salesforce APIs on behalf of the user. References: JWT OAuth Flow, Connected Apps, OAuth Scopes

NEW QUESTION # 119

Universal Containers (UC) has a desktop application to collect leads for marketing campaigns. UC wants to extend this application to integrate with Salesforce to create leads. Integration between the desktop application and Salesforce should be seamless. What Authorization flow should the Architect recommend?

- A. JWT Bearer Token Flow
- B. User Agent Flow
- C. Web Server Authentication Flow
- D. Username and Password Flow

Answer: B

NEW QUESTION # 120

Northern Trail Outfitters (NTO) is planning to roll out a partner portal for its distributors using Experience Cloud. NTO would like to use an external identity provider (IdP) and for partners to register for access to the portal. Each partner should be allowed to register only once to avoid duplicate accounts with Salesforce.

What should a identity architect recommend to create partners?

- A. Allow partners to register through the IdP and create partner users in Salesforce through an API.
- B. Create a custom page in Experience Cloud to self register partner with Experience Cloud and Ping identity store.
- C. On successful creation of Partners using Self Registration page in Experience Cloud, create identity in Ping.
- D. Create a custom web page in the Portal and create users in the IdP and Experience Cloud using published APIs.

Answer: B

Explanation:

To create partners using an external identity provider (IdP) and avoid duplicate accounts with Salesforce, the identity architect should recommend creating a custom page in Experience Cloud to self register partner with Experience Cloud and Ping identity store. Ping is an IdP that supports OpenID Connect protocol, which allows users to sign in with an external identity provider and access Salesforce resources. By creating a custom page in Experience Cloud, the identity architect can use a custom registration handler to link the partner's Ping identity with their Salesforce identity and prevent duplicate accounts. The custom page can also provide a seamless user experience for the partners. References: OpenID Connect Authentication Providers, Social Sign-On with OpenID Connect, Create a Custom Registration Handler
