Refer to the exhibit.

Your company runs front-end web servers in Azure. You need to deploy a Linux VM to be used as a web server.
To protect your web servers with a web application firewall (WAF), you deploy FortiWeb to secure applications from web-based attacks.
Which FortiWeb operation mode can you implement for this scenario?

- A. True transparent proxy
- B. Transparent inspection
- C. Passive monitoring
- D. Reverse proxy

Answer: D

Explanation:
The Reverse Proxy mode is the most appropriate FortiWeb operation mode for this scenario. In this mode, FortiWeb sits between internet users and the Linux web servers, terminating client connections and then forwarding requests to the backend servers. This enables deep inspection, protection from web attacks (like SQL injection and XSS), and full WAF functionality, making it ideal for securing front-end web servers exposed to the internet.
